Limited-Service Banks Among Biggest Gainers in Assets Survey

Continued from Page 1

dles credit card operations for its parent Chase Manhattan Corp. — had a 131% gain in assets, to $4.51 billion on Dec. 31, from $1.96 billion a year earlier. Chase was established in Feb. 1982, under Delaware's Financial Center Development Act of 1981. Since yearend 1982, deposits have grown by almost 600%, and assets have risen by more than 1,300%.

Citibank (Delaware), New Castle, a Citicorp affiliate, had the second largest gain in asset rank among the top 400 banks. Its assets jumped by more than 700%, to $903.6 million on Dec. 31 — moving up 1,778 places to rank 340th. The bank, which was established in June 1982, is primarily engaged in cash management services and wholesale banking.

The Equitable Bank of Delaware, Dover, Del., a subsidiary of Equitable Bancorp., Baltimore, had a 60% gain in assets, moving up 248 places to rank 597th, with $424.6 million in assets. The bank was established in June 1982 and handles credit card operations for its parent.

The assets at the NBD Delaware Bank, Wilmington, an affiliate of NBD Bancorp., Detroit, grew by more than 114%, to $291.2 million on Dec. 31 — advancing 862 places to rank 831st. NBD Delaware was established on May 23, 1984, and is "currently confining its activities to credit cards," according to a spokesman for the bank.

NBD Delaware is the first bank to begin operations under Delaware's Consumer Credit Bank Act of June 1983. The act was designed to bring in institutions that found it difficult to meet both the capital and employment requirements of the Financial Center Development Act, or FCDA.

Under the FCDA, a bank must have $10 million in capital to begin operations; at the end of one year, it must have $25 million in capital as well as 100 employees. Under the Consumer Credit Bank Act, or CCBA, the bank's capital requirement is linked to its credit card portfolio. And the bank does not have to meet the employment requirement if it is linked to an association that does qualify.

Computer Communications of America and the Southwestern State Bank Card Association have recently established Delaware operations to provide services for CCBA banks. At present, six CCBA bank applications are pending, according to a spokesperson for the Office of the State Bank Commissioner.

Like the FCDA, banks established under the CCBA are limited to one location within Delaware. But there are two additional restrictions for these banks. They cannot accept deposits of less than $100,000, and they are limited in their operations to consumer loans only.

Mergers Also Played a Role

Mergers were another reason for substantial asset gains last year. In Missouri, merger activity was especially strong, as multibank holding companies took advantage of changes in banking law with respect to "facilities" to consolidate their smaller banks into larger units.

In 1983, the law permitted the establishment of a facility acquired through merger within the same county. In 1984, the law permitted banks that merged to keep their existing facilities and include the acquired bank as a facility as well. For example, Bank A with three facilities acquires Bank B with three facilities. Bank A now has seven facilities — its three, Bank B's three, and Bank B itself. In 1985, the law permitted the establishment of facilities into adjacent counties.

Among the top 500 banks in the nation, Commerce Bank St. Louis County, Clayton, Mo., had the largest gain in rank, moving up 1,882 places to 256th, with assets of $1.27 billion. The bank is a subsidiary of Commerce Bancshares Inc., Kansas City, Mo. On June 30, 1985, the bank, formerly known as Commerce Bank of Kirkwood, merged 11 affiliated banks of its parent and changed its name and location.

In addition to Commerce Bank, five other Missouri banks had substantial gains in rank. Landmark Bank, Clayton,

Dear Reader, How Are We Doing?

The American Banker wants very much to make sure its coverage of the financial services industry meets your information needs. So would you spend a moment to give us some feedback on the **American Banker Listing of the Top 2,500 U.S. Banks in Assets** survey that appears in today's edition? Over the past year we have incorporated many of your suggestions to provide more meaningful information. Please return this questionnaire to L. Michael Cacace, Statistical Chief, American Banker, One State Street Plaza, New York, N.Y. 10004 (212) 943-4836.

(1.) How would you **change** the tabulation to make it more useful? What would you add?

(2.) What do you like **best** about this tabulation?

(3.) What do you like **least** about this tabulation?

(4.) **How** do you use this information in your work?

(5.) What **new** statistical survey would you like to see?

Franchising gives

Not long ago, few people considered the idea of bank franchising to be a sweet deal.

But today, a franchise from First Interstate is proving itself as a way for banks to meet growing competition from larger banks and other financial institutions. And the advantages of joining the nation's largest retail banking system look better and more numerous than ever.

Franchising: Best of both worlds.

As a First Interstate System franchisee, you continue operating under the same management and ownership. You share a recognizable, highly respected name–one associated with nearly $50 billion in assets and over 1,000 full-service banking offices–while retaining your independence.

Specifically, you gain opportunities to expand, diversify, and take advantage of sophisticated services that would otherwise be too costly. You can benefit from advanced data processing services, mortgage banking, discount brokerage, international trading, and much more. To your customers, you become a bank that's local but far-reaching, friendly but strong, conservative but innovative.

Franchising: The proven alternative.

We laid the foundation for

jumped 1,090 places to rank 431st. Commerce Bank of St. Joseph moved up 2,489 places to rank 972d. United Missouri Bank of St. Louis County, Kirkwood, rose 1,058 places to rank 1,165th. Landmark Bank of St. Charles County, St. Charles, was up 547 places to rank 1,499th; and Commerce Bank of St. Charles County, St. Charles, advanced 2,396 places to rank 2,163d.

Other Survey Findings

Overall, the largest gain in rank among the top 2,500 was scored by Indian Head National Bank, Keene, N.H. The 131-year-old bank acquired Ashuelot National Bank, Keene, on Jan. 1, 1985. As a result, its assets rose by more than 130%, to $120.3 million on Dec. 31, and it advanced 2,902 places to rank 2,062d.

American Bank, Norco, La., was the nation's 2,500th largest bank in assets, with $103.7 million on Dec. 31, 1985. A year earlier, the 2,500th bank was Farmers and Merchants Bank & Trust, Watertown, S.D., with assets of $97.8 million on Dec. 31, 1984.

Last year, 27 banks had assets of $10 billion or more, compared with 24 banks in 1984. Also, 74 banks had assets of $5 billion or more last year, compared with 67 in 1984. There were 312 banks with assets of $1 billion or more, up from 280 in 1984; and 816 banks had more than $300 million in assets last year, compared with 743 in 1984.

The total assets of the top 2,500 commercial banks in the nation rose 9.5% in 1985, to $2.31 trillion on Dec. 31. A year earlier, the top 2,500 banks had $2.11 trillion in assets.

The listing was prepared in cooperation with R.L. Polk & Co., Nashville, Tenn. The banks are listed in order of their total assets on Dec. 31, 1985. Total assets for Dec. 31, 1984, are also shown, along with the bank's 1984 asset rank. ■

New York Bill Would Let Dependent People Assign Heirs to Account Balance

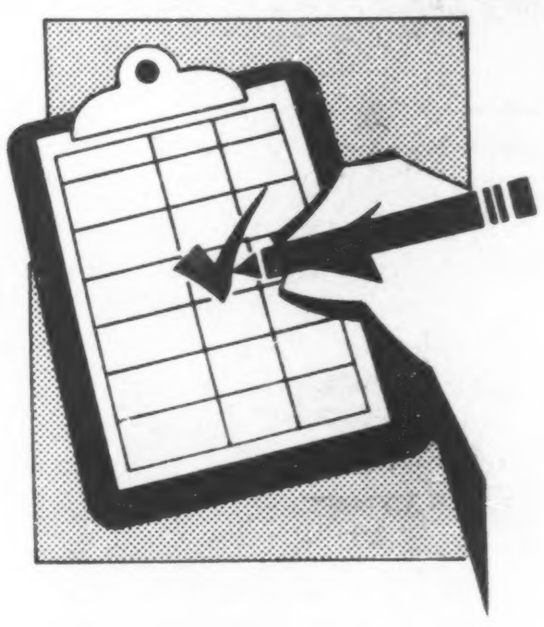
Special to the American Banker

ALBANY, N.Y. — A New York state legislator has proposed creating a "convenience account" to permit persons who must rely on a nonspousal second party for banking transactions to designate heirs to the account balance.

Under the present law, the balance of a joint account goes to the survivor.

Elderly and infirm persons who are unable to leave home often rely on a second party listed as a joint account holder in order to make transactions.

Under the new legislation, introduced by state Sen. Ralph Marino, R-Long Island, depositors can set up a "convenience account" in which the main depositor will determine whether the balance will pass to the survivor or someone else. ■



HOW CONSUMER AMERICA VIEWS THE CHANGING FINANCIAL SYSTEM

The *American Banker* is selling a 16-page reprint of its recently published series examining how American consumers view the great changes in the financial system.

Based on its second annual survey of 1,000 households conducted with help from Reichman Research Inc., a New York opinion research firm, the *American Banker* reprint examines a wide array of issues: how consumers view the health of the banking system, the integrity of bankers, and the performance of financial regulators.

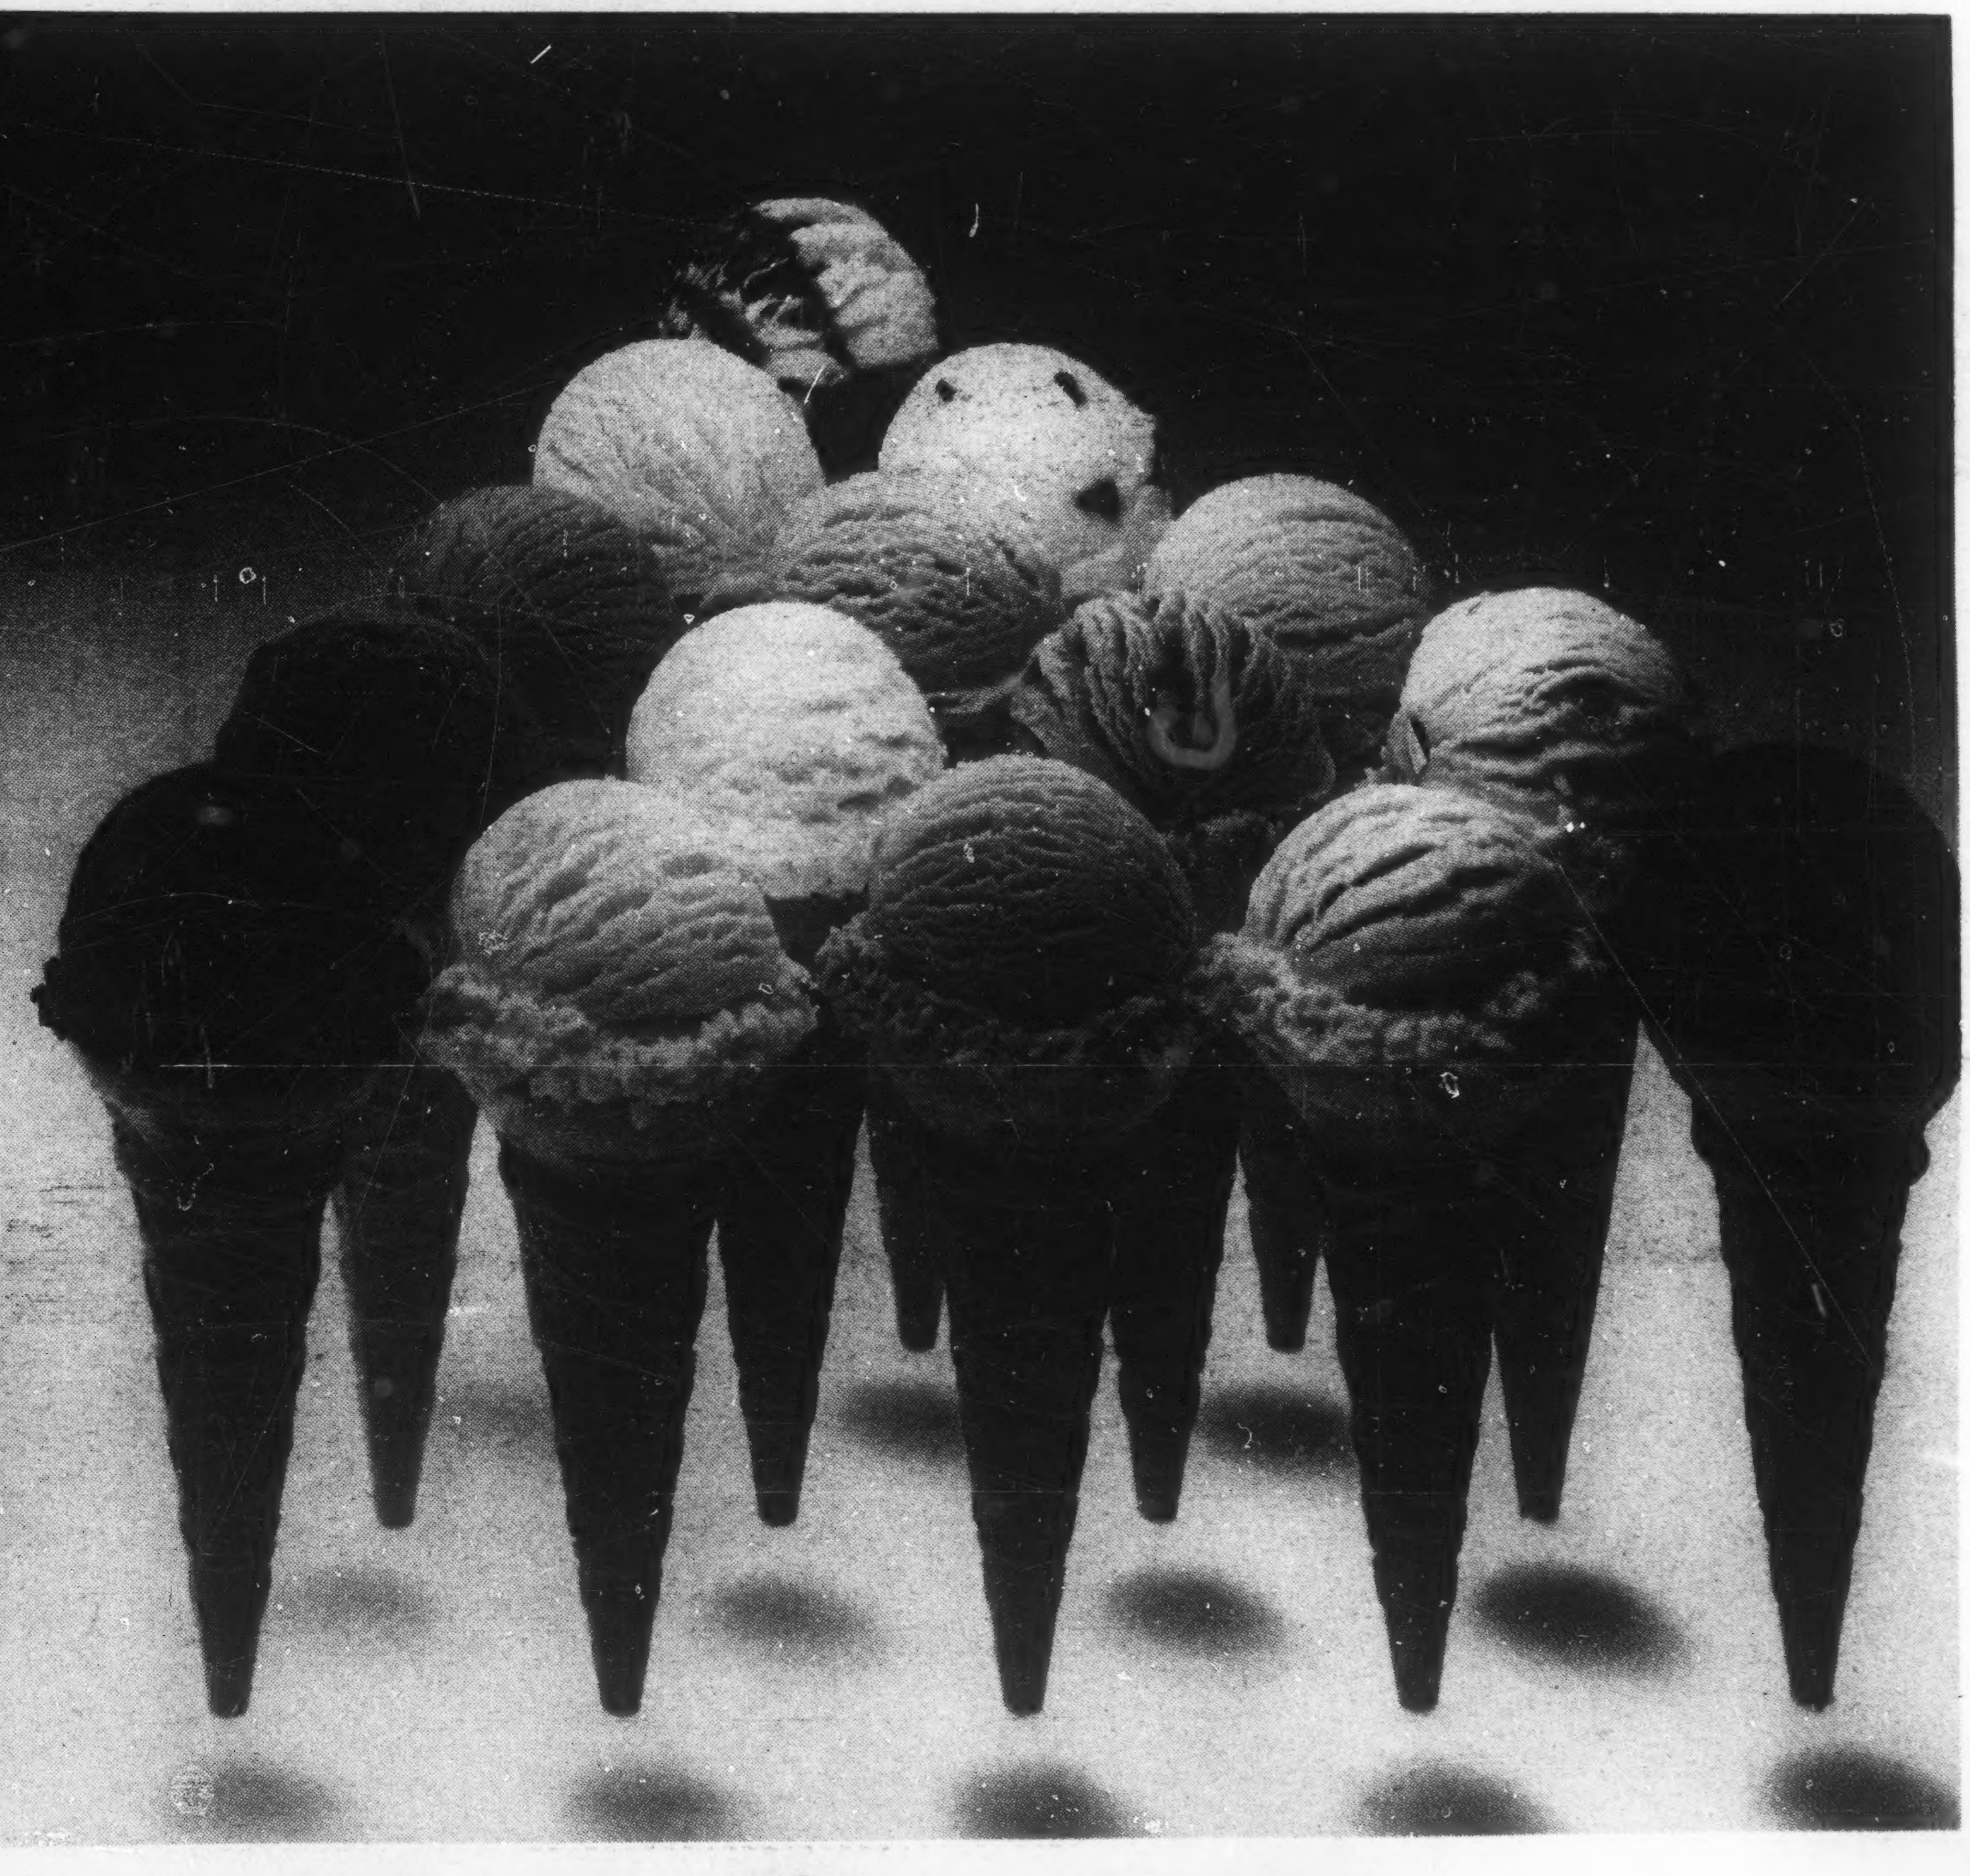
Americans were asked, too, what they think about and expect from interstate banking; how they view banking by mail, telephone, and computer; and whether they favor the expansion of powers for financial institutions.

The survey reprint also reports on what kinds of financial institutions most satisfy people, and whether Americans like new electronic banking services such as automated teller machines, direct deposit programs, and banking by home computer. And what does the public think about the thrift industry's problems?

Copies of the *American Banker* reprint can be obtained by sending a check for $15 for each copy to: *American Banker*, Att: Gina Caputo, One State Street Plaza, New York 10004 (212-943-8677).

In addition, Reichman Research is making available the survey data in a variety of other formats, including a hard copy report, magnetic tape, and a diskette package. Additional information, including a copy of the questionnaire, can be obtained from David Reichman, president, Reichman Research Inc., 3 East 44th St., New York 10017 (212-986-7709).

This is the second *American Banker* consumer attitudes survey. Copies of the previous survey, published in 1984, are available for $10 each.



you just desserts.

franchising in 1981 after uniting our own affiliates in 11 western states under the First Interstate name.

Since then, franchisees have come aboard from 10 states–Hawaii, Alaska, Montana, Wyoming, Colorado, Wisconsin, New Mexico, Iowa, North Dakota and Indiana. These operations represent 37 banks with 128 offices and $4.5 billion in combined assets.

Here's how one franchise bank profited immediately after changing its name:

First Interstate Bank of Wisconsin, positioned in America's dairy heartland, helped our trading division arrange the sale of $1 million worth of premium cattle to a major dairy products company in South Korea. The bank quickly found sellers and established itself as an organization that could handle complex international trade agreements.

To learn more about our franchising program, call John Dean, President, First Interstate System, Inc., at (213) 614-3043. He'll give you the scoop.

Step by Step

Many parties vie for a piece of the action between the time a mortgage is originated and when it comes to its final resting place. For a step-by-step look at the modern mortgage process, please turn to today's feature section, which begins on page... 15

GMAC's Infant Affiliate Is No. 1 In Mortgage Servicing – for Now

By L. MICHAEL CACACE

NEW YORK — GMAC Mortgage Co., Philadelphia, the year-old subsidiary of General Motors Acceptance Corp., has surpassed the perennial leader, Lomas & Nettleton Financial Corp., Dallas, as the top mortgage servicing firm in the nation. But its reign may be short-lived.

GMAC Mortgage had $20.35 billion in mortgages serviced for others on Dec. 31, 1985, up 5.2% from $19.34 billion on June 30, 1985, when it ranked second. GMAC Mortgage began operations in the first quarter of 1985. In March 1985, it acquired the $11.1 billion servicing portfolio of Norwest Mortgage Inc., Minneapolis, from Norwest Corp.; and in April 1985, it acquired the $7.4 billion portfolio of Colonial Mortgage Co., Philadelphia, from CoreStates Financial Corp.

Top 100 Mortgage Servicers Tables
Starting on Page 26

Lomas & Nettleton — which had ranked as the top firm in the field for 17 consecutive years, since the *American Banker* began ranking mortgage companies and banks in 1968 — had $19.72 billion in servicing on Dec. 31. Its yearend servicing was down 2.6% from $20.25 billion on June 30, but it was up 11.9%, from the yearend 1984 total of $17.63 billion.

However, Lomas & Nettleton has contracted to buy the $2.94 billion servicing portfolio of First Security Realty Services, Salt Lake City — the nation's 47th largest mortgage company — from First Security Corp. When this portfolio is placed on the books of Lomas & Nettleton, it will have approximately $22.7 billion in servicing.

According to a spokesman for GMAC Mortgage, its servicing portfolio had grown to approximately $21.5 billion at the end of April. Thus, Lomas & Nettleton may quickly regain its No. 1 ranking in the very near future.

These are some of the findings of the *American Banker's* annual survey of the top 100 firms in mortgage servicing among commercial banks and mortgage companies. The survey is based on permanent real estate mortgages serviced for others on Dec. 31, 1985. Mortgages owned by the institution, as well as forward commitments, home improvement loans, and all temporary financing such as construction and de-

Refinancings May Hurt Big Firms, Aid Small Ones

NEW YORK — Mortgage refinancings — which began to surge as interest rates dropped sharply over the first quarter of 1986 — may result in substantial losses of servicing volume for some of the large firms that have aggressively purchased mortgage servicing assets within the past year and a half.

By the same token, smaller mortgage companies with a strong capacity to originate mortgage loans will likely prosper this year.

This forecast was drawn from the *American Banker's* annual survey of the top 100 servicers.

Several of the larger mortgage servicers said that mortgage refinancings currently are accounting for almost 50% of all new loan applications. Thus, the refinancings are causing the originations portion of the business to boom. But at the same time, they are causing problems for some of the large servicers.

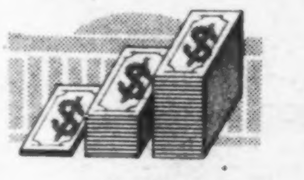
Chinese Wall Plan Emerging At Bank Board

Would Allow Purchase of S&Ls By Firms with Securities Units

By NINA EASTON

WASHINGTON — The Federal Home Loan Bank Board's prohibition against thrift affiliations with securities firms is cracking — but just a bit.



Thrifts

The agency's staff has devised a plan for a Chinese wall — separating the securities activities of a company from the thrift — to alleviate the agency's concerns about potential conflicts of interest that could arise from these sorts of affiliations.

In addition, Bank Board Chairman Edwin J. Gray has been sending out signals that he is ready to entertain requests from financial services firms with securities arms to acquire failed thrifts. What he has in mind, he said, are acquisitions by insurance companies that already own small securities operations.

"It's just experimental," Mr. Gray said in a brief interview last week. "We're going at a very slow crawl at first."

But the Reagan administration is hoping that this will be a first step toward a policy reversal at the Bank Board to permit major financial supermarkets that also underwrite securities to purchase troubled savings and loans. In past months, officials from a number of diversified firms have quietly brought their case before the Treasury Department.

And Treasury officials now believe that these broad financial service firms — more surely than Wall Street's in-

Color your ATM Fujitsu.

Through-the-wall, off premise and in the lobby.

Fujitsu adds color to the art of ATM banking with two new color graphic ATMs. The ACT 6000, a new through-the-wall, walk-up ATM. The ACT 4000, an off-premise or in-lobby ATM. They are the only ATMs you need for a totally flexible placement strategy. Call Maura Smith collect, or write, for your own private showing in color.

Based on permanent real estate mortgages serviced for others. Excludes mortgages owned by the institution, as well as forward commitments, home improvement loans and all temporary financing, such as construction and development loans. In the case of banks, servicing for the trust department and servicing by the bank's subsidiary mortgage companies with their own legal identity also are excluded. (r)—Rank company would have had, if data were received in time for the tabulation.

For firms with more than one subsidiary (mortgage company or commercial bank) servicing mortgages for others, the combined servicing figure of these subsidiaries is used. The name of the parent company is shown in bold type. (a)—Servicing is performed by Manufacturers Hanover Mortgage Corp. and Manufacturers Hanover Trust Co., New York. Year end 1985 data do not include servicing done by Manufacturers Hanover Trust. Manufacturers Hanover Corp. is in the process of selling Manufacturers Hanover Mortgage Corp.to Fireman's Fund Insurance Cos. for $260 million cash. (b)— June data are for Commonwealth Mortgage Corp., Houston. On Aug. 8, 1985, Commonwealth Savings purchased 100% of the General Electric Mortgage Corp. stock from General Electric Credit Corp. General Electric Mortgage is now doing business as Commonwealth Western Mortgage Corp. (c)—RIHT Mortgage Corp., Charlotte, N.C., and its $1.5 billion servicing portfolio were acquired in Nov. 1985 when Bank of Boston acquired RIHT Financial, Providence, R.I. (d)—Meritor Mortgage Group is a subsidiary of Meritor Financial Group, Philadelphia. Meritor Financial Group was formerly known as PSFS— the name used by Philadelphia Saving Fund Society. (e)—Servicing is performed by Goldome Realty Credit Corp. and Goldome Mortgage Corp., St. Petersburg, Fla. Year end 1985 data do not include servicing done by Goldome Mortgage Corp. (f)—Its parent, PNC Financial Corp., Pittsburgh, is in the process of selling the company to CityFed Financial Corp., Palm Beach, Fla., the holding company for City Federal Savings & Loan Assn., Elizabeth, N.J., for $103.6 million. (g)—Formerly Richard Gill Co. On 12/31/85, BancPlus Savings Assn., Pasadena, Texas, acquired the servicing portfolio and all assets of Ricard Gill Co. (h)— BankAmerica has three mortgage servicing subsidiaries: Bank of America NT&SA; Seafirst Mortgage Corp., Seattle; and BA Mortgage & International Realty Corp. Year end 1985 data were not available for Bank of America, which had over $3 billion in servicing on 6/30/85.

Executive Changes

UCB Corp. Elects Sasser Chairman

Rhone Sasser, president and chief executive officer of United Carolina Bancshares Corp., Whiteville, N.C., has been elected to the additional post of chairman of the bank holding company. J.W. Adams, vice president, has been elected vice chairman. Mr. Sasser succeeds L.R. Bowers who retired from active management of UCB in 1983 and had served as chairman since 1978. Mr. Bowers will continue as chairman of the executive committee of the board of directors.

CHEMICAL BANK, New York, promoted **Albert E. Lawrence** to executive vice president. Mr. Lawrence is head of the world banking group's real estate division, which has responsibility for all real estate activities at the bank. Named senior vice presidents were: **Vivian H. Breitel**, chief credit officer of the commercial sector of the regional bank; **William N. Britton**, head of the regional bank's commercial division I in Manhattan; **Joseph A. DeLuca**, regional manger in the real estate division responsible for the Southwest, Southeast, Far West, Northeast, Alaska, and Canada; and **Stephen A. Laserson**, who oversees the bank's nationwide business with firms in the securities industry and the insurance sector.

COMFED MORTGAGE CO., Lowell, Mass., a subsidiary of Comfed Savings Bank, appointed **George Ehinger** vice president and loan officer for its New Haven, Conn., office and **Bruce C. Ocko** vice president and loan originator for the Danvers, Mass., office. Mr. Ehinger was formerly with MCI Telecommunications in Ryebrook, N.Y. Mr. Ocko was a mortgage representative for Boston Five Cents Savings Bank.

CONNECTICUT BANK & TRUST CO., Hartford, Conn., elected the following vice presidents: **Reid T. Birdsall**, marketing department; **Alfred F. Giuliani**, Stamford executive office; **Thomas Matteo**, East Hartford office; **Gerald A. Slater**, Byram office; **Pierre A. Paradise**, Winsted office; and **Deborah J. Rivosa**, private banking department.

FIRST BANKS, Minneapolis, promoted **Carol L. Anderson** to vice president of the corporate security division, FBS Services Inc.

FIRST EASTERN CORP., Wilkes-Barre, Pa., elected **Eberhard Faber** a director. Mr. Faber is chairman and chief executive officer of Eberhard Faber Inc.

NIAGARA SHARE CORP., a publicly traded investment fund based in Buffalo, N.Y., elected **Robert G. Wilmers** and **Patricia A. Bretherton** to its board of directors. Mr. Wilmers is chairman and chief executive officer of First Empire State Corp., a bank holding company based in Buffalo, and chairman, president and chief executive officer of its principal subsidiary, Manufacturers and Traders Trust Co. Miss Bretherton is senior vice president of Niagara Share Corp.

TWIN CITY FEDERAL SAVINGS & LOAN ASSOCIATION, Minneapolis, hired three new officers from outside the bank. **John D. Kightlinger**, previously at Fiduciary Counselling Inc., St. Paul, was named vice president and fixed-income portfolio manager. **Jason E. Korstange**, former vice president of commercial loans at Michigan National Bank, Sterling Heights, Mich., and **Paul D. McDonald**, former group vice president and assistant manager of the international division at Michigan National Bank of Detroit, were named vice presidents in corporate commercial loans.

— Franklin Smith

GMAC Unit Passes Lomas in Mortgage Servicing

Continued from Page 1

velopment loans, are excluded.

The *American Banker* tabulation includes servicing performed by commercial banks; independent mortgage companies; mortgage companies that are subsidiaries of other firms, including banks, bank holding companies, and thrift institutions; and holding companies whose major holdings are in mortgage companies.

The mortgage company business is actually two businesses. First, there is the origination business. A mortgage company originates first mortgages with its own or borrowed funds and then sells these loans to investors. The second business is servicing, which generally is more lucrative. For a fee, the mortgage company will continue to service the mortgages it sold to investors.

Servicing includes the collection of payments in accordance with the terms of the loan and the operational procedures covering accounting, bookkeeping, insurance, tax records, loan payment follow-up, delinquency loan follow-up, and loan analysis.

The *American Banker* survey also finds that the trend for acquisitions of entire mortgage banking companies continues. According to Lawrence J. Trautman, a senior vice president and director of mortgage banking industry practice at Donaldson, Lufkin & Jenrette Inc., New York: "During the past year, the trend has been for insurance and traditionally nonfinancial companies to be predominant mortgage banking purchasers as illustrated by General Motor's meteoric acquisition prowess, while commercial banks led the list of sellers. It is astounding to consider that General Motors, through GMAC, went from absolute last place among mortgage servicers to the nation's largest in mortgage servicing within just several months."

The main reasons for the sale of mortgage servicing subsidiaries by banks have been the pressure to raise additional capital to meet new federal regulatory requirements plus the high prices paid in the past several years for mortgage servicing companies.

The buyers will "continue their love affair with mortgage bankers in the immediate future," Mr. Trautman said. "Financial services niches such as mortgage banking should remain uniquely attractive to corporate strategic planners in other industries, as they constantly strive to discover businesses with significant profit potential."

Prices paid for servicing portfolios have been softening recently, down as much as 20% to 25% from the historically high levels of 225 basis points to 250 basis points of principal balance for attractive Government National Mortgage Association servicing. The main reason for the decline is that the high prices induced traditional mortgage bankers to sell significant amounts of servicing within the past two years, and the supply of servicing for sale has clearly exceeded demand.

Another factor that may be causing prices to soften is the surge in refinancings.

Other Survey Findings

The top 100 mortgage firms, the survey finds, had $397.8 billion in mortgages serviced for others on Dec. 31, 1985, up 16.6% from $341.3 billion for the top 100 mortgage servicers on Dec. 31, 1984.

Of the total, 37 commercial bank-related firms were servicing $149.8 billion, or 37.7% of the total. The 27 thrift-related firms were servicing $103.6 billion, or 26%. And the 36 other firms — those that are independently owned or owned by other types of financial services firms — were servicing $144.4 billion, or 36.3%.

Just one year earlier, as of Dec. 31, 1984, 41 bank-related firms accounted for $157.8 billion in servicing, or 46.2% of the $341.3 billion in servicing of the top 100 firms. The 25 thrift-related firms had $82.6 billion, or 24.2%. And the 34 other firms had $100.9 billion, or 29.6% of the total.

And just two years ago, as of Dec. 31, 1983, 45 bank-related firms had 48.1% of the servicing of the top 100 firms that year. Sixteen thrift-related firms had 17.4% of the total, and 39 other firms with 34.5% of the total.

Thus from 1983 to 1985, banks have lost a significant amount of market share to both thrift-related and other mortgage companies. And they are continuing to lose market share in 1986. Three major acquisitions of bank-related mortgage firms are currently under way:

- Manufacturers Hanover Corp. is in the process of selling Manufacturers Hanover Mortgage Corp., Farmington Hills, Mich., the nation's third largest mortgage company, with $14.9 billion in servicing, to Fireman's Fund Insurance Cos. for $260 million cash.
- PNC Financial Corp., Pittsburgh, is in the process of selling Kissell Co., Springfield, Ohio, the nation's 12th largest mortgage company, with $6.7 billion in servicing, to CityFed Financial Corp., Palm Beach, Fla., the holding company for City Federal Savings & Loan Association, Elizabeth, N.J., for $103.6 million. City Federal Savings was servicing $5.6 billion for others on Sept. 30, 1985, to rank sixth among thrift institutions. (A listing of the Top 100 thrifts in mortgages serviced for others, based on Sept. 30, 1985, servicing, will be published Tuesday.) According to City Federal, its servicing portfolio totaled $6.2 billion at yearend. If the Kissell acquisition had occurred by yearend, City Federal would have ranked as the fifth largest mortgage servicer, with combined servicing of $12.9 billion.
- And, as mentioned above, Lomas & Nettleton is acquiring the $2.94 billion servicing portfolio of First Security Realty Services.

If these acquisitions had taken place at yearend 1985, the commercial bank share of the servicing total of the top 100 firms would have been 31.5%, while the thrift share would have risen to 27.7%, and the share of all other firms would have been 40.8%.

➡ Servicing: Page 47

AMERICAN BANKER CAN BE READ DAILY VIA ONLINE SERVICES

American Banker stories and commentaries can be read through several electronic sources. These sources can provide early-morning access to the news, the ability to search for stories on chosen subjects in past editions, and clipping services, in which stories on preselected topics are delivered automatically to the reader. Telephone and terminal equipment are needed to use these services. A brief description follows.

BRS INFORMATION TECHNOLOGIES — Contains today's news stories in financial services, a financial services news summary, daily executive job changes, a daily calendar of events in Washington, and more. Available beginning 6:00 a.m. Eastern Time. Call (800) 223-3009. In New York State, call (212) 943-9893.

DIALOG — FINIS (file 268) indexes and abstracts marketing articles from American Banker. NewsSearch (file 211), indexing only. Trade & Industry Index (file 148), indexing and full text, no searching of text. Trade & Industry ASAP (file 648) indexing and full text with searching capabilities. Call (800) 227-8431.

NEWSNET — Major stories and articles. Full text search and retrieval available at 6:30 a.m. Eastern Time. Call (800) 345-1301. In Pennsylvania, call (215) 527-8030.

NEXIS® — Provides the full text of all American Banker features and news coverage since Jan. 2, 1979. Available approximately 48 hours after print publication date. Electronic clipping service available for automatic updates. FINIS, with indexing but not full text, also available. Call (800) 227-4908.

For further information, please call Brad Henderson, director of product development, the American Banker. Collect (212) 943-4846.

Germania Buys Ailing S&L to Become 1st Thrift in Both Illinois and Missouri

Special to the American Banker

ST. LOUIS — An Illinois savings and loan has quietly slipped into neighboring Missouri, even though a bill on permitting interstate thrift operations is still pending in the Illinois State Legislature.

Germania Federal Association of Alton, Ill., last Wednesday announced its acquisition of the ailing Washington First Federal Savings and Loan Association, making it the first thrift to operate in both states.

Washington First Federal, based in Normandy, Mo., a St. Louis suburb, had been in receivership since April 1985. It had three offices and assets of $58.7 million, but its net worth was a negative $1.3 million.

Germania plans to move quickly to take advantage of its unique franchise. Edward L. Morris, Germania's president, said the thrift will apply to turn its two Missouri loan origination offices into full-service branches.

"Our task will be to take the Germania reputation and marketing ability and operate full service in Missouri," Mr. Morris said.

Germania, which has headquarters in Alton, Ill., about 25 miles from St. Louis, has assets of $559 million.

Germania, meanwhile, has participated in the Missouri loan market. Its loan origination offices, less than two years old, originated $18 million in mortgages — 10% of Germania's total — last year.

Mr. Morris said the Illinois association paid no cash for the acquisition and received no cash assistance from the Federal Savings and Loan Insurance Corp. He noted that Washington First Federal's loan portfolio was "absolutely clean," primarily because it had not been an active lender for several years. Its problems stemmed from an inability to rebound in the early 1980s from the poor interest rate spread on its portfolio of fixed-rate loans. Mr. Morris said Germania should be able to operate the offices "on a break-even basis starting immediately."

Germania's move was made possible by a loan from Joseph L. Mason, a home builder who owns 21% of the thrift's stock. Mr. Mason bought $1.5 million of convertible subordinated debentures in March to increase Germania's capital to a level acceptable to the FSLIC. The 9% debentures mature in 1993. However, Mr. Mason indicated that he might be interested in converting them to common stock before they mature, a move that would increase his stake to over 30%.

Mr. Mason had submitted his own bid for Washington First Federal two years ago. He dropped that bid because, in his words, "The Federal Home Loan Bank Board moved too slowly." He said that Germania's application proceeded more swiftly because it has the assets and ability to operate and advertise the Missouri offices better than an individual could have.

Germania is discussing a second public stock offering, but shareholders last week approved a rights issue that would allow Mr. Mason to maintain his percentage ownership.

Germania is not the first out-of-state thrift to move into Missouri. In 1981, Homes Savings of America of Los Angeles acquired Hamiltonian Federal Savings & Loan Association in St. Louis in an FSLIC-assisted transaction. ■

Credit Card Rate Bill Loses, but Check-Hold Bill Wins in Missouri

Special to the American Banker

ST. LOUIS — An effort to knock down interest rates on credit cards has been defeated in the Missouri legislature.

A House-passed bill that would have lowered the ceiling on credit cards rates in Missouri died in conference committee as the legislative session ended. Senate banking committee Chairman Danny Staples said that he was unable to assemble the four senators who were to sit on the committee.

The Missouri House's bill would have pegged the credit card rate ceiling, now 22%, at six percentage points above a bond index. The current maximum would have been about 15.2% under the bill.

Rep. James Riley, D-Richmond Heights, said the senators probably hoped the bill would just go away. "They want to come back next year and have a look at it," he said. "That's always a good excuse."

However, consumer groups won a victory on a check-hold bill in this year's Missouri legislature. The legislature passed a bill that would limit the holds that banks place on checks. It also sets a maximum charge of $15 for insufficient funds checks.

Under the measure, banks would have to let a customer draw on a check within six days after it was deposited. If the check was written on a bank in the same Federal Reserve district, the limit would be three days. ■

GMAC Unit No. 1 in Mortgage Servicing

Continued from Page 46

For the first time since the *American Banker* began to rank banks and mortgage companies on a joint basis 17 years ago, no commercial bank ranks among the top 100 firms. Data for the largest commercial bank mortgage servicer — Bank of America, San Francisco, which ranked 61st in last year's listing with $2 billion in servicing on Dec. 31, 1984, and which had $3 billion in servicing on June 30, 1985 — were not available.

Hibernia Bank, San Francisco, was the bank with the largest servicing portfolio reporting to the *American Banker*. Hibernia had $1.03 billion in mortgage servicing on Dec. 31, to rank 125th among banks and mortgage companies.

Also, among mortgage companies ranking below the top 100, two bank-related companies are seeking buyers, while one mortgage company was acquired by a banking firm.

Fidelity Bond & Mortgage Co., Philadelphia, said that its parent, Fidelcor Inc., is in the process of accepting offers for the company and its $1.15 billion mortgage servicing portfolio.

First Atlanta Mortgage Corp. said that its parent, First Wachovia Corp., is "exploring the possibility of a change in ownership" of the company. But as of Dec. 31, no offer had been solicited. First Atlanta Mortgage had a servicing portfolio of $1.13 billion at yearend.

On Feb. 25, 1986, Norstar Bancorp, Albany, N.Y., acquired Intercounty Mortgagee Corp., Hempstead, N.Y. Intercounty Mortgagee had $1.24 billion in servicing on Dec. 31.

Among the top 100 firms, one banking firm acquired a mortgage company from another banking company. North Central Financial Corp., Dayton, Ohio, which ranked 90th in servicing, with $1.6 billion, was acquired by Shawmut Bank Corp., Boston, from Third National Bank & Trust Co., Dayton, on Dec. 31. ■

Refinancings May Hurt Big Firms, Aid Small Ones

Continued from Page 1

The servicing companies that will be hardest hit by the refinancings are those firms that recently paid premium prices to service mortgages that are now disappearing from their portfolios. If these companies do not have a strong capacity to originate mortgages, they will have to acquire the new mortgages from those companies with these capabilities.

Lawrence J. Trautman, a senior vice president and director of mortgage banking industry practice at Donaldson, Lufkin & Jenrette Inc., New York, said the refinancings are causing "a transfer of wealth from major portfolio servicers to 'cottage industry' originators.

"Many aggressive purchasers of loan servicing during the past several years will find that their portfolios will 'run off' at levels never imagined in their wildest dreams, with the handsomely priced asset they've paid for simply disappearing as the borrower refinances with an originator possessing a superior point-of-sale capability," he said.

"The obvious corollary is that many relatively small mortgage bankers having strong loan origination capability may enjoy their best year ever."

The refinancings may also be a factor in the recent decline in prices paid for servicing portfolios. The *American Banker* has found a 20% to 25% reduction in the prices paid for servicing portfolios. The main reason for the decline in prices is that the supply of servicing for sale has exceeded demand as the recent high prices for servicing induced traditional mortgage bankers to sell their portfolios.

There are a lot of mouths to feed. The selling bank, the insurance company, the investment bank, the lawyers, all want a piece of the deal. And the buyer has to get a good deal, too.

Jack C. Zoeller, president of Capital Risk Management Corp., commenting on the difficulty in securitizing investor notes. [Page 1]

Unquote

Random Thoughts

By SANFORD ROSE

The more things change, the more they remain the same. The words are familiar, even tired, but, alas, how true they are. The major problem of banking today is the lack of asset diversification. This problem is particularly severe for those institutions that are oriented toward wholesale borrowers.

Why the problem? In a recent speech, George Vojta of Bankers Trust has reminded us that there would be no need for financial intermediaries if markets were perfectly competitive. In perfect markets, borrowers and investors would have the time, information, and skills to deal directly with one another and to effect whatever transactions were needed. Banks come into existence because markets are not perfectly competitive, because information is not free and equally distributed across the marketplace.

Unfortunately, the marketplace is becoming progressively more efficient, gradually depriving banks of much of their traditional raison d'etre. In their history of Citibank from 1812 to 1970, Harold Cleve-

Chemical Unveils All-in-One Package In Face of Steady Erosion to Citibank

By LAURA GROSS

News Analysis

NEW YORK — Chemical Bank's new consumer bank account package — ChemPlus —debuts at a time when it has been losing share of the New York retail deposit market rather steadily to Citibank over the past year and a quarter.

Among the major commercial banks, both Chemical, the city's fifth largest bank in deposits, and Manufacturers Hanover Trust Co., the third largest, have been growing — but much slower than No. 1 Citibank, which grew nearly 3% since December 1984, and at the expense of the other two.

This gigantic spurt in Citi's market share growth occurred following its introduction last January of the Citi-One account, a relationship pricing package like the newly unveiled ChemPlus plan that links the consumer's deposit and lending accounts into an integrated format, providing for easy transfers, payments, and reconciliations. Discounts on loans and breaks on deposit account service fees are given to individuals who maintain full deposit relationships and meet specific requirements.

According to James W. Johnston, the Citibank division executive in charge of the consumer business in the northeastern U.S., Citi-One "has been the major contributor to our very, very significant growth over the past 12 months." He said that "virtually all of our customers switched to Citi-One" when the plan was introduced in January of 1985.

That doesn't mean, he added, that no new customers bought the package: "It attracted a lot of new customers, and some significant proportion of them would have to be from Chemical, so I

Thrift Turns Investor Notes Into Securities

Small Jersey Firm Arranges Packaging, Placement for Deal

By LYNN BRENNER

NEW YORK — Investor note receivables originated by City Federal Savings Bank, Piscataway, N.J., have been packaged and used as collateral for securities sold to an institutional investor in one of the first such transactions.

The deal was structured by Capital Risk Management Corp., a New Jersey-based financial management firm.

Capital Funding I Corp., a Capital Risk subsidiary, bought City Federal's investor notes — loans to limited partners — and used them as collateral for $7.3 million of 7.70% serial notes, priced at 99.63%, executives at Capital Risk said.

The serial notes, which carry maturities of up to four years, were insured by Financial Security Assurance Inc., rated AAA by Standard & Poor's Corp. and privately placed.

"These are two seasoned real estate partnerships which were closed two years ago," said Jack C. Zoeller, president of Capital Risk Management. "The underlying assets are apartment buildings in Atlanta, built about 12 years ago."

The transaction enabled the thrift to book "a substantial gain" and get the receivables off its balance sheet, Mr. Zoeller said.

At the same time, he said, City Federal was able to get a higher price than if it had sold the investor notes unpackaged.

"Unpackaged investor notes with AAA-rated insurance on them trade at about 150 to 200 basis points over Treasuries," Mr. Zoeller said. If the insurer is lower-rated, "they trade at

Alabama Banks in Deal

Mergers,Acquisitions

NEW YORK — Two Alabama banking companies, Colonial BancGroup, Montgomery, and Farmers and Merchants Bank, Foley, have signed a letter of intent to affiliate Farmers and Merchants with Colonial. Terms were not disclosed, pending approval of the deal by regulators and Farmers and Merchants stockholders. Colonial BancGroup has $898.5 million in assets, and Farmers and Merchants has $115.4 million in assets.

Household's Rosy Outlook

PROSPECT HEIGHTS, Ill. — Household International Inc. should see a 15% to 20% rise in its earnings per share this year from 1985, according to Donald C. Clark, chairman and chief executive. Last year, the company earned $3.65 a share. Mr. Clark said the company expects each of Household's businesses to improve this year, with especially healthy results predicted for the second half.

First City's Ratings Fall

CHICAGO — Duff & Phelps said it lowered its ratings of some of First City Bancorporation of Texas' debt and preferred stock securities. These rating changes affect approximately $424 million of securities of the Houston-based First City. Separately, the certificate of deposit rating of the lead bank, First City National Bank of Houston, has been retained at its current level.

Disclosure Plan Assessed

WASHINGTON — Federal regulators are considering a common disclosure plan for banks requiring them to annually submit a "short, simple statement" noting their financial condition, business plans, and other data required by securities laws, said L. William Seidman, chairman of the Federal Deposit Insurance Corp. "We believe these disclosures could enhance the stock of valuable public information concerning banks," Mr. Seidman told a banking conference last week in Scotland. An FDIC spokesman said he expects the agency to renew a moratorium expiring June 30 on considering regulators' bank disclosure proposals until the common disclosure plan is completed.

Decree on Redlining Ends

WASHINGTON — The Justice Department recently ended a 38-year-old consent decree that resolved a civil antitrust suit against a number of New York City banks and insurance companies. The decree concluded a 1946 suit alleging that the companies conspired to set mortgage interest rates, payment schedules, and appraisal procedures as well as to engage in redlining. Most of New York's larger commercial banks and thrifts were named in the suit.

Commonwealth Is Top Thrift Mortgage Servicer

By IRENE APPLEBAUM

NEW YORK — Mortgage loans serviced for investors by the top 100 thrifts in the field totaled $144 billion on Sept. 30, according to a newly expanded *American Banker* survey of thrifts in mortgage banking.

Commonwealth Savings Association, Houston, ranked first in the survey. It had $9.9 billion in loan servicing for others on Sept. 30. However, the servicing function for the $1.5 billion-asset thrift is actually performed by its mortgage company subsidiary, Commonwealth Mortgage Corp., Houston. Commonwealth Mortgage was the sixth largest mortgage company at yearend 1985, with $9.2 billion in servicing.

Table of Top 100 Thrifts in Mortgage Servicing
Page 18

Among the top 100 thrifts, the volume of mortgages serviced for investors ranged from a low of $400 million to nearly $10 billion. Thirty-seven institutions had servicing in excess of $1 billion.

(A listing of the top 100 banks and mortgage companies in mortgages serviced for others was published in Monday's edition.)

The survey is based on the report of condition submitted by federally insured institutions to the Federal Home Loan Bank Board. Data were provided by ADP's Data Services Division, New York, from their computer file of these reports. Sept. 30, 1985, data are the latest available. Included are thrifts that have mortgage company subsidiaries that actually perform the servicing function.

On Aug. 3, 1985, Commonwealth Savings purchased the General Electric Mortgage Corp., Portland, Ore., from General Electric Credit Corp. General Electric Mortgage is now doing business as Commonwealth Western Mortgage Corp. and ranked 50th among mortgage companies in servicing, with $2.9 billion on Dec. 31.

Based on the combined servicing in its two mortgage company subsidiaries, Commonwealth Savings is the sixth largest mortgage servicer among all servicers — thrifts, banks, and mortgage companies — with $12.1 billion on Dec. 31.

American Savings & Loan Association in Stockton, Calif., was the second largest thrift in mortgage servicing, with $9.4 billion on Sept. 30, 1985, up 22% from $7.7 billion a year earlier. With nearly $28 billion in assets as of third-quarter 1985, it is the largest institution in the survey.

Thrifts from California and Texas dominate the survey both in terms of their number and the dollar volume of loan

Will raising capital make your stock the next take-over target?

Regional and community banks and thrifts are often caught in the capital raising cross-fire.

They must raise capital to support growth opportunities, yet they have legitimate concerns that doing so could adversely impact their stock's market value or promote undesirable ownership concentrations.

While Ryan, Beck services institutional accounts, its retail following of individual bank stock investors is second to none. Simply said, Ryan, Beck distributes stock among the many and avoids concentrating it among the few.

That's why more and more regional and community banks and thrifts are relying on the expertise, distribution capabilities and integrity of Ryan, Beck when raising capital.

Importantly, Ryan, Beck remains a supporting element after the issue is sold. Today, Ryan, Beck ranks among the largest investment bankers dedicated to raising capital and maintaining trading markets for the banking and thrift industries. In 1985, Ryan, Beck managed, co-managed or guaranteed $300,000,000 in new capital financings, while maintaining primary trading markets in the stocks of over 500 community and regional banks and thrifts.

For more information about Ryan, Beck's services and how we operate, call Fenwick Garvey, Executive Vice President, 201-325-3000.

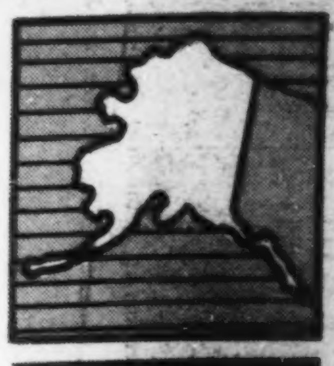
Source of Data is ADP, Data Services Division, New York, from their computer file of the Federal Home Loan Bank Board data base for FSLIC-insured institutions. The listing is based on permanent real estate mortgages serviced for others and excludes mortgages owned by the institution, as well as forward commitments, home improvement loans and all temporary financing, such as construction and development loans. Please note that several of the institutions listed here own mortgage companies which actually perform the servicing function. These mortgage companies were included in yesterday's listing of the Top 100 Mortgage Servicers Among Mortgage Companies and Commercial Banks.

Alaskans Seek to Reassure Out-of-State Lenders on Oil Outlook

Special to the American Banker

SEATTLE — Alaska bankers, worried that investors will lose faith in their state's oil-based economy, are traveling south to try to keep money flowing north.

Delegations of Alaska bankers, businessmen and politicians, including Gov. Bill Sheffield, have visited Seattle in recent weeks to reassure counterparts that the bottom is not falling out of Alaska's economy.



ALASKA

Their message: Because Alaska's oil patch differs structurally from that in the Southwest, the economic fallout from lower oil prices will be milder in Alaska than in Texas, Oklahoma and Louisiana.

But financing for some Alaska projects already has dried up because of news reports about Alaska's looming $1 billion budget deficit and construction cutbacks by North Slope drillers Atlantic Richfield Co., Standard Oil Co., and Exxon, said Scott Hawkins, economist for Alaska Pacific Bank, a division of KeyCorp., of Albany, N.Y.

"You won't get anybody to say they've pulled out," said Michael Burns, president of Alaska Pacific. But "there are some people who are wary about investing here right now... based on inadequate information."

Statistics on interstate transfers of capital don't exist to back up the Alaska bankers' contention. But Mr. Hawkins said the evidence is in his office every day in the form of calls from worried out-of-state lenders.

"There's been a kind of a knee-jerk reaction by a lot of the major lenders in the secondary markets," he said. Alaska projects "are now having to be vigorously defended."

Insurance companies, banks, and governmental lenders like the Federal National Mortgage Association and Federal Housing Administration are getting cold feet, Mr. Hawkins said. Fannie Mae and FHA "have had more people up here on fact-finding missions in the last three weeks than they have in the last three years."

Mr. Hawkins said his worst-case projection is for a 2% drop in employment in a recession that will last to 1990. That would be less severe than the recession of the late 1970s that followed completion of the Trans-Alaska Oil Pipeline, he said.

Mr. Hawkins said the recession will hurt Alaska less than Texas because the Alaskan oil fields are highly capital-intensive and are pumped by only three large operators that have reserves to carry them through lean times. In other oil states, hundreds or thousands of small drillers, supply and service companies are dependent on the oil fields, Mr. Hawkins said. Less than 4% of Alaska's jobs are in the North Slope oil fields.

"There's a tremendous amount of work continuing on the North Slope," Mr. Burns said. Operators have scheduled six million man-hours of work this season, and the annual sealift from Seattle to the North Slope this summer will be the largest ever, with 26 barges of oil-field modules and equipment.

Alaska has $1.5 billion cash on hand to cushion budget deficits over a period of several years. Alaska's $7 billion Permanent Fund — oil revenues held in reserve — also could be used to cushion the impact of recession.

The drop in oil prices — although

servicing they represent. These two states account for $87 billion of loan servicing for others, or 60% of the total volume from the 100 thrifts in the survey.

Twenty-seven of the top 100 thrifts are located in California, with 12 of these in the top 25. Together these institutions report $55 billion in loan servicing for others. The 12 Texas thrifts account for $31 billion.

Florida and Georgia had five and four institutions, respectively, ranked among the top 100. The following states each had three thrifts among the top 100: New Jersey, New York, Ohio, Massachusetts, and Washington.

Other Survey Findings

- Loan servicing fees at the top 100 thrifts totaled $108 billion on Sept. 30, an increase of 75% from a year earlier.
- Loan servicing volume was up 48% to $144 billion from $97.2 billion a year earlier.
- Among the savings institutions with the highest ratio of loan servicing fees to loans serviced were: 12th-ranked Home Owners Federal Savings & Loan Association, Boston, and 77th-ranked Lamar Savings, Austin, Tex. Each had ratios of 0.33%.

First Financial Savings Association in Stevens Point, Wis., which ranked 96th in servicing, had the next highest ratio — 0.29%.

Data were taken from the "Quarterly Financial Report" submitted by FSLIC-insured institutions to the Federal Home Loan Bank Board. Mortgage loans serviced for investors is taken from Section F-Supplemental Data, line 380: "Mortgage Loans Serviced for Others." Mortgage servicing income is from Section D-Income, line 090, "Loan servicing fees." ■

Consignment . . .

Consignment: Page 9 ➻

Butterfield. "A lot will depend on where the nontraditional savings and loan items are sold," she says.

Indeed, none of the 40 institutions presently on the management consignment program has emerged as an attractive buyout target or been judged sufficiently healthy to operate on its own, Ms. Barnes says. She predicts, however, that some situations may be resolved by the end of the year.

"When you see them coming out the other end of this program — that would be a very good sign," says California Savings and Loan Commissioner William Crawford.

As far as Ms. Bacon is concerned, though, there's at least one major challenge left: "overcoming the 'troubled' prefix to our name." ■

"Innovator." It's a term that describes us to the letter. I Because being first has become second nature to the Big E. And new ideas have become the nature of our success — success that has seen our bottom line perform a full $200 million ahead of projections we set in 1981, back when our industry transition began. I Take a look at our track record of innovation: I Eleven years ago, we headed the fight for savings bank checking accounts. I A year later, we unveiled the first shared remote banking network — Metroteller, today one of the largest in the country. I We were among the first banks to achieve a multi-state presence with our 1982 expansion into Texas, Michigan, Florida and New York. I In March, 1983, our public offering of mortgage-backed securities was the largest of its type — the first to offer investors a wide range of maturities through the serialization of coupons. I In the depths of the 1983 home-building lull, we were the first bank to offer a truly saleable adjustable rate mortgage. President Reagan wrote to thank us for "helping keep the recovery rolling." I We have introduced a home catalog of our financial services. Customers simply dial 1-800-THE BIG E to do business with us. I And now, Moneyplex: a unique concept that gathers investment, insurance, real estate and banking services under one roof. I Empire of America has secured its leadership among national thrift leaders. In fact, a study commissioned by the World Forum on Consumer Financial Services has ranked us among 12 international "creme de la creme" financial service innovators. Only four American institutions were so honored. I We have blazed new trails to find opportunity in difficult times. I We have dared to be new and different. I We have confronted change. And we have managed it — to the tune of $8 billion in assets, and over 1300 financial service outlets in 46 states. I Will Empire of America continue to boldly, shrewdly, successfully innovate? I Without question. I The "I"s have it.

Financial Industry May Let Public Fight for IRAs

Lobbyists Say They Are Likely to Rely on Constituent Pressure to Thwart Senate Committee's Plan

By BARTLETT NAYLOR

WASHINGTON — What promises to be one of the strongest political campaigns waged on behalf of the financial industry may occur without involving the industry's own formidable army of lobbyists.

IRA WATCH

At issue is the tax deduction for individual retirement accounts, or IRAs. In a sweeping tax reform bill approved last week by the Senate Finance Committee, the current $2,000 maximum annual deduction for contributions would be banned for all but those not covered by a company pension plan. The plan allows individuals to continue to make contributions without having to pay taxes on the money earned from the investment.

Bipartisan support in the Senate against eliminating the basic IRA deduction has quickly emerged, although hammering out an agreement is not expected to be easy. Sen. William Roth, R-Del., says he will fight for an amendment to reinstate the IRA deduction. Without it, he said, "We will be pulling the rug out from under millions of middle-class people in this country who are trying to save."

IRA Marketers Playing Wait-and-See
Page 2

Sen. Alan Cranston, D-Calif.; Sen. Alfonse D'Amato, R-N.Y., and Sen. John Melcher, D-Mont., have all pledged to defend the deduction.

For savings institutions, IRAs have meant stable, long-term deposits. Banks and thrifts have attracted more than $70 billion of the total $225 billion in IRA investments. For example, at Homes Savings of America, Irwindale, Calif., the nation's largest thrift, IRAs account for 9% of its deposits.

Are financial lobbies in a frenzy?

Not really, said Mark Clark, a representative of the U.S. League of Savings Institutions. "There's a public uprising happening spontaneously," he said.

Receptionists in the offices of several senators reported they are receiving calls from constituents complaining about the proposed change. "It's a tremendous amount," said a staffer for Sen. Cranston.

An expensive lobbying campaign

AN AMERICAN BANKER SPECIAL REPORT

Payments Via Automated Clearing House Network Up 20%

By TOM FERRIS

First of two parts

NEW YORK — There were 586 million electronic payments processed through the automated clearing house network last year, up by 20% from 1984, according to a survey by the *American Banker.*

The results represent the first complete figures published on clearing house transaction volume, which has long been a source of confusing and conflicting data.

The total is made up of the number of payments handled by the Federal Reserve System, plus intraregional volume of clearing houses that use private-sector processors.

The total does not include "on-us items" — electronic payments between two parties using the same bank. These transactions do not have to flow through the network but do replace checks, and replacing checks is the purpose of the automated clearing house.

News About Technology
Starting on Page 10

There may be 70 million to 100 million or more on-us items a year, according to guesses by knowledgeable observers who stressed that reliable research has not been done on the subject.

The survey also found that the government still initiates more electronic payments through the network than fi-

Government Still the Biggest User of Automated Clearing House

➡ Continued from Page 1

nancial institutions. Last year, agencies such as the Treasury Department originated 297.5 million transactions, compared with 288.5 million payments made by banks on behalf of corporations and consumers.

However, bank-originated volume is rapidly closing in. These commercial payments grew by 32% in 1985, while government transactions increased by 11%.

The findings also reflect the stranglehold the Fed has on the business of processing electronic payments. The central bank, which processes all transactions between regions as well as intraregional volume in 28 of the 31 local clearing houses, had a hand in moving 97% of the 1985 volume. Efforts are under way to bring in private-sector processors to compete with the Fed.

The survey underscored just how far the automated clearing house has to go before capturing a significant portion of payment traffic. The total of 586 million payments equals about 1.5% of the estimated 1985 check volume of 40 billion to 42 billion. In fact, the increase in the number of checks written last year alone — estimated at 4% to 5% by Paul M. Connolly, the Federal Reserve System's check product manager — was perhaps three times greater than the total clearing house volume.

When the regional clearing houses were linked in the mid-1970s, proponents were confident that efficiencies provided by paperless processing would lead to rapid reductions in the number of checks written. Those great expectations clearly have been dashed.

Steady Growth Still Seen

Nevertheless, backers of the network remain confident that steady growth lies ahead. The National Automated Clearing House Association, the umbrella organization that oversees the network, ambitiously predicts that by the turn of the century, half the payments in the nation will be made through the automated clearing house, better known as the ACH.

But to achieve that goal, volume will have to grow rapidly in the years ahead and reverse a downward trend. Automated clearing house payments increased by 27% in 1983, 22% in 1984, and 20% in 1985, according to the *American Banker* survey. With a sustained annual growth rate of 20%, the volume in 1999 would be seven and a half billion. A 25% rate would create a volume of 16.5 billion. Whether such growth rates are realistic is unclear.

The automated clearing house consists of 31 regional clearing houses, or processing facilities, linked by computer. Each automated clearing house routes electronic payments between banks. When transactions are sent between regions, the originating bank sends the items to its local clearing house, which routes them via the appropriate regional clearing house to the receiving institution.

The network was designed primarily as a low-cost mechanism for handling small-dollar-value consumer payments, such as the direct deposit of payroll and Social Security benefits. The automated clearing house also handles debit transactions, in which a company is authorized to withdraw funds from a customer's account as payment for insurance policies, purchases, leases, or other services.

In addition, corporations use the network for intracompany transactions. One particularly successful application is "cash concentration" debits, which enable a corporation to centralize funds from remote offices overnight, a valuable cash management tool. The national clearing house association is trying to encourage firms also to pay invoices via the network but has made little progress so far.

Many observers think the best prospects for increased volume involve purchases at cash registers in supermarkets, gas stations, and stores. Tests of these so-called point-of-sale transactions through the automated clearing house are now under way.

Part of the confusion about automated clearing house volume stems from the figures released by the National Automated Clearing House Association. The group overstates the volume processed by the network because it counts interregional items twice — once at the originating clearing house and once at the receiving facility.

For example, the association put the 1985 commercial volume at 480 million items, an increase of 41% over the group's 1984 figures. However, when the double counting is eliminated, according to the *American Banker* survey, the actual commercial volume was 288.5 million, a 32% increase over 1984.

Also, using double counting, the association reported that commercial volume processed through the network exceeded government volume in 1983.

Year	Government-Originated (in millions)	Share	Year	Commercial (in millions)	Share	Total (in millions)
1985	297.5	51%	1985	288.5	49%	586.0
1984	268.5	55%	1984	218.0	45%	486.5
1983	240.5	60%	1983	158.7	40%	399.2
1982	208.8	66%	1982	106.2	34%	315.0

Comparison of Government-Originated Items vs. Commercial Items

However, the survey showed that private-sector transactions still had not overtaken government-initiated payments in 1985.

The association has been criticized by some observers for publicizing overstated figures. William R. Moroney, the president of the group, said: "The intent was never to mislead." He said that for internal accounting reasons, figures on both incoming and outgoing volume are important to clearing houses, and that is how volume has been calculated traditionally.

"The National Automated Clearing House Association's going to relook at the way it counts its numbers [in order to present an] accurate statistical picture," he said. The group plans to conduct research on the number of payments by application and on the number of on-us items initiated, he added.

The survey counted the number of debits and credits originated in 1985. Prenotifications, or test messages sent before live transactions, were not included. The survey did count dishonored items returned to the originating institutions.

Fed Claims 97% of Processing

The Federal Reserve System said it had a role in processing 568.6 million payments in 1985, or 97% of the volume. Another 17.4 million in regional traffic was handled solely by the private sector: 11.8 million in New York, 4.7 million in Arizona, about 900,000 in Hawaii, and some 50,000 on the West Coast, where the San Francisco-based Calwestern Automated Clearing House Association started using a private processor last November.

Those sources also provided data for the three previous years. Volume totaled 315 million in 1982, 399.2 million in 1983, and 486.5 million in 1984.

The survey showed that the percentage of commercial transactions is rising steadily, from 34% in 1982 to 49% in 1985. If on-us items are included, the private-sector transactions did outnumber government payments last year.

However, George C. White, a consultant on electronic banking, says the industry should take little pride in that fact. Mr. White said studies have determined that the government writes only 5% of all checks. Therefore, he concluded, the private-sector automated clearing house volume also should be 20 times greater than that of the

Bankers Flock to Take Exam Certifying Corporate Cash Managers

By TOM FERRIS

LOS ANGELES — When corporate cash managers take their profession's first certification exam later this month at testing sites around the country, there's a good chance some of their bankers will be sitting next to them.

About one-third of the 1,380 registrants for the exam are bankers seeking to brush up on cash management fundamentals and impress corporate customers.

Many of these bankers think that being certified as knowledgeable in corporate financial practices will give them an edge in marketing operating services to companies.

"We see it as one more way to differentiate ourselves in the marketplace," said Joseph C. Webb, senior vice president of Citizens and Southern National Bank in Atlanta.

Banks like C&S, Mellon Bank, Chemical Bank, and the First National Bank of Chicago are sending large contingents to the exam. For example, 80 officers at Mellon and 55 at Citizens and Southern have registered for the test.

However, other institutions, including Citibank and Wells Fargo Bank, while offering to pay the $150 exam fee for their cash management specialists, do not think certification will carry much weight.

"We have a handful of people taking the test," said David Kurrasch, a vice president of Wells Fargo in San Francisco. "But daily performance is what's important to me."

CCM
CERTIFIED CASH MANAGER

"Certification's a noble cause, but I don't think it's going to be used to differentiate anybody in the short term," said Harry D. "Buddy" LeTourneau, senior vice president of NCNB National Bank of North Carolina, which has 10 employees seeking certification.

But Mr. LeTourneau and most other bankers interviewed at a cash management conference here last week welcomed the certification program as a stimulus for education and a reason for bankers to review the fundamentals of cash management.

"One of the major complaints of corporate people is, 'I'm tired of training bankers,'" said Mr. Webb of Citizens & Southern. "We see this exam as a way of correcting that."

The four-hour exam will be given at 55 sites in the U.S. and Canada on May 31 and will be administered by Educational Testing Service, the Princeton, N.J., company that supervises entrance tests for colleges and graduate schools.

The exam will consist of 200 multiple-choice questions on collection and disbursement systems, payment systems, cash flow management, short-term borrowing and investments, international cash management, and related areas.

The effort was spurred by the National Corporate Cash Management Association, a trade group of financial officers.

By having a certification procedure similar to that of accountants, auditors, and financial analysts, corporate cash managers are trying to add some distinction to their relatively young profession.

Of the 1,380 people who registered by the March deadline, 60% are corporate officers, 35% are bankers, and 5% are consultants and academics, according to Raymond Ruzek, executive director of the national association.

The test originally was to be given annually, but because of strong interest, might be given twice a year, Mr. Ruzek said in an interview here at the annual conference of the Cash Management Association of Southern California.

The national association has published a 140-page study guide for the test. In addition, some banks are holding training sessions for employees taking the exam.

Citizens & Southern is requiring its cash management specialists to attend review sessions totaling 14 hours, Mr. Webb said.

Mellon Bank is holding seminars on two Saturdays to prepare for the test, according to Edward J. Pierson, director of marketing for global cash management services.

Mr. Pierson said Mellon is sending 80 of its bankers to the exam, while its Philadelphia subsidiary, Mellon Bank (East), has registered an additional 15. ■

Fight . . .

➸ Continued from Page 1

may not be necessary since the popular press is full of IRA stories, lobbyists said.

Last week, the Investment Company Institute, the lobby for mutual funds, placed advertisements in 70 newspapers, warning that "Someone in Washington wants to kill your IRA."

Such ads may not be needed anymore, said Erick Kanter, vice president of the trade group. For example, *The Wall Street Journal* on Friday headlined an IRA story, "Proposed Changes to IRAs Would Hurt All Investors." Said Mr. Kanter, "I couldn't have written it better."

He said the Investment Company Institute has no plans for more advertisements. "The public has become aware and sensitized."

Some banks and thrifts may choose to mail circulars to IRA account holders recruiting political help, said the U.S. League's Mr. Clark. "I got a call this morning from a thrift asking me about this." But the U.S. League itself hasn't decided to mount a major campaign soliciting letters and calls to members of Congress.

Consumer lobbies may also sit out the fight. "We haven't looked into it," said Michael Caudell-Feagan, lobbyist for the U.S. Public Interest Research Group, "and I'm not aware of any consumer groups involved."

Exactly what financial institution trade groups will do to participate in the campaign is being decided in meetings that continue this week. "There's a coalition of industry groups developing," said James Butera, lobbyist for the National Council of Savings Institutions. "We've got to devise a broader strategy. The time frame is the key thing."

During the next few weeks, Senate Finance Committee staffers will draft the actual legislation approved in outline last week. In June, the bill is expected to face Senate debate, a labor that could take two to six weeks, according to observers.

The House passed its tax reform bill last December and made only one change regarding IRAs: a linkage that would prohibit IRA contributions for

Fight: Page 71 ➸

Clearing House . . .

➸ Continued from Page 67

government.

Referring to the roughly 1:1 ratio of government to commercial items, Mr. White said: "I think those figures are devastating for a system that has been in existence since the 1970s. The private sector's really not doing the job."

The Impact of Float

For a number of reasons, the automated clearing house has been a more attractive payment mechanism for the government than for private industry.

In the cost-benefit analysis of whether to use the automated clearing house, the potential loss of float is a key consideration for the company or consumer making the payment. By using electronic funds transfer instead of a check, the payer usually surrenders his money sooner. That is one factor that has slowed the use of electronic payments by the private sector.

However, the government has made a philosophical decision not to "play the float," according to Florence Young, an adviser to the Federal Reserve Board. Therefore, its decision to embrace the automated clearing house was easier, based primarily on the clear-cut savings in processing expenses, she said.

Thanks to an aggressive mail and television advertising campaign, the Treasury Department has persuaded more than one-third of Social Security recipients that the direct deposit of benefits into their accounts is better than receiving checks in the mail.

And while the growth in government payments has now dropped to about one- third the rate for commercial items, that gap could narrow. A recently enacted law that requires the federal government to pay its bills on time has led the Treasury Department to make plans to convert to electronic transactions some 77 million vendor payments it now makes by check. In addition, government agencies are pursuing other programs that will increase their number of electronic payments.

NEXT: The *American Banker* ranks the top 100 originators of automated clearing house items.

Random Thoughts

By SANFORD ROSE

With all the chatter about the problems of banks, and particularly small banks, one might have thought that the number of banks in the U.S. would be declining. It may very well be that the number of independent banking entities is contracting, but the number of bank charters continues to increase — and at a pretty good clip.

From 1983 through 1985, 765 new U.S. banks were born, says the firm of Lyons, Zomback & Ostrowski, which is preparing to release the latest edition of its Depository Institutions Performance Directory, published by Warren, Gorham & Lamont. There are now 14,356 insured banks in the U.S. In 1983 there were only 13,591 entities.

And where are the new additions to be found? At first blush, the answer seems paradoxical. The greatest number of new banks are to be found in those states with the gravest banking problems.

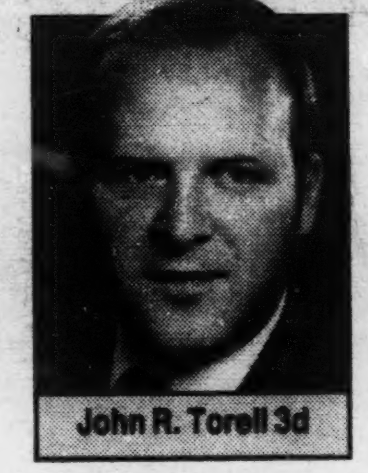
From 1983 to 1985, the median return on assets of Texas banks dropped 34 basis points, from 1.16% to 82 basis points. During the same period Texas added 233 banking charters.

Random Thoughts: Page 4 ➸

Manufacturers Hanover Plans Pursuit Of Middle Market Across the Nation

By DONALD SHOULTZ

NEW YORK — Manufacturers Hanover Corp. will go head-to-head with regional and local banks by aggressively pursuing a larger slice of the nationwide corporate middle market, the banking company's president said Monday.



John R. Torell 3d

"We will invest massive sums," John R. Torell 3d said in his keynote address to the Bank Marketing Association's annual corporate/-commercial marketing conference here.

Mr. Torell said that Manufacturers Hanover's 1984 acquisition of CIT Financial Corp., which has $9.5 billion in gross receivables from the corporate middle market, was only a beginning.

CIT's network of more than 100 offices in 44 states will allow Manufacturers Hanover to woo the middle market on a nationwide basis, he said. And he believes his bank has the expertise to do it.

"Despite the tall buildings and household names," Mr. Torell said, "New York is a series of middle-market communities."

Mr. Torell spoke before some 200 bankers gathered for the Bank Marketing Association conference, "Marketing to the Middle Market." At times, his address took on aspects of a sermon, complete with dire warnings and challenges laid on the congregation.

Although the corporate middle market has been around for centuries, "bankers have suddenly discovered it, like it was something new. And everyone wants the middle market," he said.

The reason for this hot pursuit of the middle market, in Mr. Torell's view, is simple: profits.

AN AMERICAN BANKER
SPECIAL REPORT

Chase Is No. 1 At Automated Clearing House

Its 41 Million Payments in 1985 Were 14% of Network's Volume

By TOM FERRIS

Second of two parts

NEW YORK — The Chase Manhattan Bank initiates four times as many electronic payments through the automated clearing house network as any other bank, according to a survey by the *American Banker.*

With a total of 41.2 million payments, Chase alone accounted for 14% of the network's commercial volume in 1985, the survey found.

In the first published ranking of originators of electronic payments through the automated clearing house, the Bank of America was second with 10.1 million payments, followed by the Norwest Bank Minneapolis with 8.6 million and the Northern Trust Co., Chicago, with 7.1 million.

The survey revealed an extraordinary concentration of payments among a relatively few banks. The top five institutions account for 26% of the 1985 commercial volume of 288.5 million transactions, while the top 25 originated half of the total. The 75 largest players dominated three-quarters of the volume.

Top ACH Originators

	Volume (in millions)
Chase Manhattan Bank	41.2
Bank of America	10.1
Norwest Bank Minneapolis	8.6
Northern Trust Co.	7.1
Marine Bank of Springfield, Ill.	6.7

The list also turned up some surprises, with a number of comparatively small but aggressive banks finding niches and placing near the top of the ranking, while some of the nation's largest banks — notably Citibank — ended lower down on the list.

Table of the Top 100 ACH Originators
Page 39
How Does a Little Bank Make It to No. 5?
Page 38

The Marine Bank of Springfield, which in terms of assets ranks 452d in the country, ended up in the No. 5 spot among originators. Three insurance companies use the Illinois bank to initiate debits against consumer bank accounts to collect premium payments through the automated clearing house, or ACH, as it is known.

Other banks with large volumes relative to their asset sizes were the United Bank of Denver, ranking 13th; Bank One, Columbus, 18th; the Society National Bank of Cleveland, 33d; and the M&I Marshall & Ilsley Bank, Milwaukee, 39th.

Especially large volumes were re-

ACH: Page 38 ➸

While Citibank Lags, Chase Builds Business in Electronic Payments

Continued from Page 1

corded by subsidiaries of the Norwest Corp., the 21st largest bank holding company. Along with its main affiliate in Minneapolis, which ranked third, its bank in Omaha placed ninth, its subsidiary in Des Moines finished 22d, and its institution in St. Paul, Minn., fell just outside the top 100. When originators are ranked by holding company, Norwest comes in second with 15.9 million items, following Chase's 43.3 million.

Giant Citibank Low on List

Citibank, the nation's largest bank and a recognized leader in technology, finished surprisingly low on the list, in 55th place, with a volume of just 1.3 million last year.

Citibank's uncharacteristically low profile has been interpreted in some circles as a reflection of a lukewarm attitude toward the ACH, a network conceived a decade ago as the backbone delivery mechanism for an impending movement away from checks and toward electronic funds transfer.

However, despite the high expectations of the mid-1970s, volume growth has been painfully slow for ACH boosters, who would welcome a more aggressive approach from a bank with the enormous marketplace clout of Citibank.

A Citibank official attributed the bank's relatively low volume to the absence of a bank-wide push to convert checks to the ACH, and to a concentration on only selected applications of the network.

He also noted that because of its huge consumer clientele, the bank has a large number of unrecorded "on-us" electronic payments, which are sent between customers using the same bank and therefore do not actually flow through the ACH.

"We're looking at ways to expand our use of the ACH," said the official, who asked not to be named. "I expect us [Citibank] to grow to the point that we have a bigger impact."

While its huge asset base and market prominence makes Citibank's low volume stand out, its performance is actually more or less typical of its peers. Some 42 banks had a volume between one million and two million items last year, and for most large institutions, the ACH clearly is not a high priority.

Overall, in 1985, there were 586 million payments on the network, about half of them originated by federal government agencies and half by the private sector. That total represents only about 1.5% of the estimated annual check volume of 40 billion to 42 billion, a firmly entrenched base that will not be supplanted easily.

One reason why many banks do not push ACH transactions is that there is usually no measurable short-term gain, observers said. They noted that few banks now make a profit on ACH processing. "You can count them on both hands, for sure," said James H. Hopes, a vice president of Chase.

Yet, he said, the market is extremely cost-competitive. Once a corporation starts using a particular bank for processing, he added, it is unlikely to switch except in unusual cases, so institutions offer extremely low prices to lock in new business.

"The ACH is a loss leader at this time for many banks," Mr. Hopes said.

Efficient, Paperless Collection

For Chase, the ACH was a natural extension for its business with large insurance companies. For years, the bank had issued preauthorized checks on behalf of insurers, simplifying the collection of premium payments from consumers. The ACH provided a more efficient, paperless method of doing the same thing.

Since then, Mr. Hopes said, "it has become a plank in the bank's philoso-

---

452d Largest Bank Is 5th in Electronic Payments

By TOM FERRIS

NEW YORK — When going down the list of the top originators of electronic payments, many readers are likely to stop at the No. 5 spot and say, "Who?"

Up there with the Chase Manhattan Bank and the Bank of America is the Marine Bank of Springfield, Ill., an institution with a relatively paltry $597 million in assets.

The fact that the 452d largest bank in the nation can rank among the top originators of automated clearing house payments demonstrates, on the one hand, that many institutions are not promoting paperless transactions.

But it also shows that aggressive, small banks can compete well in the maturing business of processing electronic payments.

Marine Bank has built its annual volume of 6.7 million transactions largely by attracting the business of some insurance companies in the area, said Paul L. Matheis, a vice president.

Insurers are among the biggest backers of the automated clearing house network, using it to collect premium payments automatically from the accounts of policyholders.

Marine Bank's customers include the State Farm Insurance Co. in Bloomington, Ill., and the Franklin Life Insurance Co. in Springfield.

In fact, until now, Marine Bank has focused its electronic payments strategy on a handful of firms. "We actually are just beginning a big marketing push on the automated clearing house," Mr. Matheis said.

Unlike most institutions, the Illinois bank does not regard this operating service as a loss leader, he said. "We definitely view it as a profitable business," he noted.

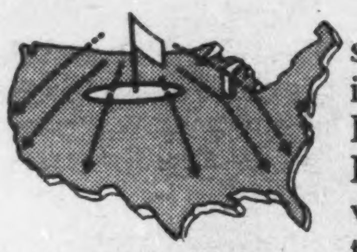
Can Marine Bank keep pace with the Chases and the Bank of Americas? "Realistically, probably not, if you look at total numbers," said Mr. Matheis.

However, he added, the total numbers will not stop Marine Bank from trying. He said it is expecting another boost in volume this summer, when some state government agencies begin paying their employees by direct deposit through the automated clearing house. ■

Marine Midland Planning Expansion Within Northeastern US Quadrant

By ANDREA BENNETT

CHICAGO — Marine Midland Banks Inc. plans to expand within the northeastern portion of the United States in advance of interstate banking there, its vice chairman said recently.



Interstate Banking

Speaking to security analysts in Chicago on Friday, Thomas F. Donovan, the vice chairman of the $24.7 billion-asset Marine Midland, said the company wants to strengthen its position in the "Northeast quadrant," which he described as running eastward from Illinois and northward from Virginia to Maine.

Marine will achieve this expansion both through acquisition and investment, he said. The company has a program under which it invests in banks in states outside New York. It currently has stakes in the Society Corp. of Cleveland, the Statewide Bancorp. in Toms River, N.J., and the Michigan National Corp. in Detroit.

"We'd like to have an investment of consequence, which is between 20% and 25%, in every state in the quadrant," Mr. Donovan said in a presentation to the Investment Analysts Society of Chicago.

"We're constantly looking at and talking to others [in that area]," he added.

Expanding within the Northeast is part of a new five-prong strategy Marine has set, Mr. Donovan said. The other parts of the strategy are:

- Building on its position in New York State, both through internal growth and acquisition.
- Expanding nationwide through the distribution of targeted products such as credit cards, auto leasing, student loans, real estate lending, and commercial finance.
- Expanding its role as the Hongkong and Shanghai Banking Corp.'s partner in the Western Hemisphere.
- Strengthening its role in capital markets and New York money markets.

As part of its capital markets strategy, Marine announced Monday, it is establishing a London investment banking subsidiary, the Marine Midland Capital Markets Ltd.

ACH . . .

➸ Continued from Page 38

phy to use the ACH as an electronic delivery mechanism." Chase aggressively sought additional business from insurance companies and its volume, unlike most other users of the network, is dominated by debit transactions, which outnumber credit items by a whopping 6:1 ratio.

At one time, Chase controlled 33% of the network's commercial volume, according to Mr. Hopes, but maintaining such a share is impossible in a growing system. The bank's current market share of 14% is still a dominating amount, however, and conceivably could grow next year. The bank now is initiating 4.6 million items a month, a rate 34% higher than last year, he said.

The *American Banker* survey measured the number of debits and credits originated in 1985. The survey counted dishonored items returned to the originating institutions.

Prenotifications, which are test messages sent before live transactions, were not included. Neither were transactions that do not actually flow through the ACH, such as on-us items and payments sent directly between banks.

Each regional clearing house was asked to list each member bank that had combined credit and debit volume exceeding 500,000 items. The following banks supplied their own data: the Mellon Bank, the Mellon Bank (East), the First National Bank of Louisville, and the Liberty National Bank & Trust Co., Louisville. ■

Marine Midland . . .

➸ Continued from Page 38

The new strategy comes nearly one year after Marine Midland announced a corporate restructuring that included plans to drop almost $3 billion in low-yielding assets and replace them with more lucrative lines of business.

At that time, a large percentage of the bank's asset base was tied up in such activities as international, shipping, and energy loans that had a return on allocated equity of less than 8%, Mr. Donovan said.

Since then, the bank turned its focus to emphasize domestic middle-market and asset-based lending, and expanded its lending to the utilities, securities, and communications industries. It also shifted much of its international exposure in Europe, the Middle East, and Asia to the Hongkong Bank.

Mr. Donovan said Marine had made substantial progress toward that restructuring. ■

Uninsured Deposits Fall $3 Billion in Southwest

Texas Bankers Claim Success at Replacing Them with Stable Funds as Major Firms Show Gains

By DAVID LaGESSE

DALLAS — Major banks in the Southwest have lost some $3 billion in uninsured deposits since the beginning of the year, according to a study made by McCarthy, Crisanti & Maffei Inc., a New York investment advisory firm.

The almost 15% decline in that important, if sometimes volatile, funding source is a barometer of market fears over the strength of the largest banks in the Federal Reserve District of Dallas, analysts say.

The statistics support concerns about potential funding problems at some Southwest banks. During the recent flurry of earnings announcements from Texas banks, Fed officials sometimes asked for hourly reports on deposit activities, according to published reports here. No serious funding problems apparently developed during the period.

However, several of the Texas and Oklahoma banks announced deposit withdrawals of hundreds of millions of dollars for the first quarter, as they set aside money to cover losses from the precipitious drop in the price of oil.

Texans Hear Chase on Interstate Bill
Page 28

Texas bankers, meanwhile, are emphasizing their success at replacing the large deposits with more stable funds. Average deposits actually rose for five of the seven largest bank holding companies in Texas during the first quarter of the year, according to figures provided by institutions that dominate the district's numbers.

"We don't want to depend on people who look at credit ratings and rates alone," said Jay Crager, chief financial officer at Allied Bancshares Inc., based in Houston.

Allied's incentives, including bonuses for employees who bring in new deposits, have been particularly successful in attracting money market deposits. Average money market accounts at Allied jumped 32%, to $1.6 billion, in the first quarter, compared with the same period in 1985.

Uninsured accounts, though shrinking, remain the company's largest funding source. Because the accounts each contain more than $100,000, the limit of federal deposit insurance, they are often the first to be withdrawn at signs of distress at a bank.

On average, the jumbo certificates accounted for $3.2 billion, or 42% of

Fuji Bank's New York Subsidiary Is No. 1 in US Productivity, Survey Finds

By L. MICHAEL CACACE

NEW YORK — Fuji Bank and Trust Co., New York, was the most productive of the nation's top 300 banks in deposits last year, according to an *American Banker* survey.

Productivity is becoming a more important gauge of a bank's ability to compete with its peers, as deregulation of the financial services industry continues. (See the box on page 26 for an explanation of bank productivity.)

Productivity Rankings of Top 300 Banks
Tables Begin on Page 19

The *American Banker* measured the 1985 productivity performance of the top 300 banks and identified the 25 banks with the best efficiency ratios and the 25 with the poorest ratios.

Most Productive Banks

	Efficiency Ratio For 1985*
Fuji Bank & Trust Co., New York	0.74
Valley Nat'l Bank, Passaic, N.J.	0.88
Norstar Bank, Rochester, N.Y.	0.94
Republic Nat'l Bank, New York	1.00
Allied Bank of Texas, Houston	1.16

*Efficiency ratio is noninterest expense divided by net income.

In addition, for two subgroups of banks — banks with assets over $10 billion and banks with assets between $5 billion and $10 billion — the 10 best and the 10 poorest banks within each subgroup are identified.

Productivity: Page 25 ➸

Thrift Mergers Are Threatened By Reform Plan

By BARTLETT NAYLOR

WASHINGTON — As thrifts struggle with record failures, rescue takeovers are considered crucial to protecting the federal insurance fund underpinning industry stability.

TAXES
Bracing for Reform

Now comes tax reform. Nestled in the sweeping legislative package many predict will become law this year are a number of provisions that dampen takeover incentives.

Take the case of Omaha's Commercial Federal Savings and Loan Associa-

The Top 300 Banks in Deposits on 12/31/85. The banks are listed in order of the "efficiency ratio" for banks reporting net income for 1985. The "efficiency ratio" is the ratio of noninterest expense to net income. This ratio measures the cost of bringing $1 to the bottom line. Total noninterest expense is the sum of the following expense items: salaries and employee benefits; expenses of premises and fixed assets; and all other operating expenses. "Limited service banks" are excluded here. They are listed sepoarately below.

The 10 Best Productivity Measures Among the Top 300 Commercial Banks With over $10 billion in Assets

For definitions see the first table on this page.

Productivity Measures for Limited Service Banks Ranked Among the Top 300 Banks

		Efficiency Ratio	Net Income Per Employee	Avgerage Assets Per Employee	Average Assets
1	**Manufacturers Hanover Bank (Delaware), Wilmington**	0.33	189,017	15,925,863	1,863,326,000
2	**Morgan Bank (Delaware), Wilmington**	0.46	198,430	15,776,017	2,713,475,000
3	**Chemical Bank (Delaware), Wilmington**	0.47	238,500	18,895,102	2,040,671,000
4	**Chase Manhattan Bank (USA) NA, Wilmington**	2.97	60,026	4,239,752	2,819,435,000
5	**Citibank (South Dakota) NA, Sioux Falls**	3.21	68,918	3,342,277	7,526,808,000

A limited-service bank, as defined for survey purposes, is one with a commercial bank charter, but which makes little or no commercial loans. In most cases they have been used by a bank holding company to handle a particular functiori, such as their credit card operations, and to take advantage of higher usury ceilings and tax advantages. For other definitions see the first table on this page.

American Banker has calculated three different measures of productivity: the "efficiency ratio"; net income per employee; and average assets per employee. The efficiency ratio is noninterest expense divided by net income. It measures the cost of bringing $1 to the bottom line. **Average assets** for 1985 are reported unless otherwise indicated. **Noninterest expense**: banks were asked to report noninterest expense as reported in the federal regulatory report of income. **Number of employees**: the average number of full-time employees for 1985 is shown unless otherwise indicated. **(a)**— Average assets for the quarter ending Dec. 31, 1985, as reported by the bank in the federal regulatory report of condition. **(b)**— The number of full-time equivalent employees on payroll at the end of December 1985, from the federal regulatory report of income. N.A.— Not available.

Measuring Productivity at Top 300 Banks

Commercial Banks Ranked by Deposits on December 31, 1985

Compiled by **American Banker** Copyright 1986

Deposit Rank		Deposits 12/31/85	Net Income 1985	Average Assets	Noninterest Expense	No. of Employees	No. of Branches	Efficiency Ratio	Net Income Per Empl.	Avg. Assets Per Empl.

American Banker has calculated three different measures of productivity: the "efficiency ratio"; net income per employee; and average assets per employee. The efficiency ratio is noninterest expense divided by net income. It measures the cost of bringing $1 to the bottom line. **Average assets** for 1985 are reported unless otherwise indicated. **Noninterest expense:** banks were asked to report noninterest expense as reported in the federal regulatory report of income. **Number of employees:** the average number of full-time employees for 1985 is shown unless otherwise indicated. **(a)**— Average assets for the quarter ending Dec. 31, 1985, as reported by the bank in the federal regulatory report of condition. **(b)**— The number of full-time equivalent employees on payroll at the end of December 1985, from the federal regulatory report of income. **(c)**—Formerly National Bank & Trust Co. Changed title on 3/31/86. **(d)**—Formerly Suburban Bank. Changed title in April, when its parent, Suburban Bancorp., was acquired by Sovran Financial Corp., Norfolk, Va. N.A.—Not available.

Measuring Productivity at Top 300 Banks

Commercial Banks Ranked by Deposits on December 31, 1985

Compiled by **American Banker** Copyright 1986

Deposit Rank		Deposits 12/31/85	Net Income 1985	Average Assets	Noninterest Expense	No. of Employees	No. of Branches	Efficiency Ratio	Net Income Per Empl.	Avg. Assets Per Empl.

American Banker has calculated three different measures of productivity: the "efficiency ratio"; net income per employee; and average assets per employee. The efficiency ratio is noninterest expense divided by net income. It measures the cost of bringing $1 to the bottom line. **Average assets** for 1985 are reported unless otherwise indicated. **Noninterest expense**: banks were asked to report noninterest expense as reported in the federal regulatory report of income. **Number of employees:** the average number of full-time employees for 1985 is shown unless otherwise indicated. **(a)**— Average assets for the quarter ending Dec. 31, 1985, as reported by the bank in the federal regulatory report of condition. **(b)**— The number of full-time equivalent employees on payroll at the end of December 1985, from the federal regulatory report of income. N.A.— Not available.

Measuring Productivity at Top 300 Banks

Commercial Banks Ranked by Deposits on December 31, 1985

Compiled by American Banker Copyright 1986

Deposit Rank		Deposits 12/31/85	Net Income 1985	Average Assets	Noninterest Expense	No. of Employees	No. of Branches	Efficiency Ratio	Net Income Per Empl.	Avg. Assets Per Empl.

American Banker has calculated three different measures of productivity: the "efficiency ratio"; net income per employee; and average assets per employee. The efficiency ratio is noninterest expense divided by net income. It measures the cost of bringing $1 to the bottom line. **Average assets** for 1985 are reported unless otherwise indicated. **Noninterest expense**: banks were asked to report noninterest expense as reported in the federal regulatory report of income. **Number of employees:** the average number of full-time employees for 1985 is shown unless otherwise indicated. **(a)**— Average assets for the quarter ending Dec. 31, 1985, as reported by the bank in the federal regulatory report of condition. **(b)**— The number of full-time equivalent employees on payroll at the end of December 1985, from the federal regulatory report of income. **(e)**— Includes net income from sale of mortgage company subsidiary. N.A.— Not available.

Republic National, Morgan Guaranty Most Productive Big Banks

Continued from Page 1

Excluded from these three groupings are limited-service banks that ranked among the top 300 and the banks among the top 300 that had net losses in 1985. Because of their special natures, these two groups of banks are listed separately.

Fuji Bank and Trust is a 100% owned subsidiary of Fuji Bank Ltd., Tokyo, the world's second largest bank. Fuji Bank and Trust, which ranked as the 114th largest commercial bank in deposits on Dec. 31, with $2.43 billion, was first in all three measures of productivity. Its efficiency ratio was 0.74, which means it cost the bank 74 cents in noninterest expense to generate $1 of net income. The bank also earned over $115,000 per employee and had over $20 million in average assets per employee.

According to Hiroaki Suzuki, executive vice president of the bank, "The concentration on wholesale business, a strong market base among Japanese firms doing business in the United States, and the strong support from the parent bank" were the major reasons for the bank's high productivity performance. In addition, Mr. Suzuki cited the ability of the bank to perform well in three areas — asset-liability management, human resource management, and customer relationship management — as reasons for achieving the top position in productivity performance.

Fuji Bank and Trust earned $14.7 million in net income last year. The bank has 127 employees, and its average assets totaled $2.58 billion in 1985. Its noninterest expenses totaled $10.9 million last year.

Passaic, N.J., Bank Is 2d

Valley National Bank, Passaic, N.J., a full-service bank that ranked 252d in deposits at yearend with $1.04 billion, had the second best measurement of productivity among the top 300 banks last year. Its efficiency ratio was 0.88. According to Samuel F. Riskin, chairman of the board and president of Valley National, the bank's high productivity performance is "the result of a very dedicated and cohesive group of officers."

Valley National earned $20.7 million in net income last year. It has 425 full-time employees and operates 17 branches.

The efficiency ratio for the top 25 banks ranged from 0.74 for Fuji Bank to 2.05 for Old Kent Bank & Trust Co., Grand Rapids, Mich. Among the top 25 in productivity, 21 had assets of less than $5 billion.

Two New York City banks — Republic National Bank and Morgan Guaranty Trust Co. — head the listing of banks in the $10-billion-or-more-in-assets group. Republic's efficiency ratio was 1.00, and Morgan's was 1.57. For the top 10 banks in this grouping, the efficiency ratio ranged from 1.00 at Republic to 3.53 at NCNB National Bank of North Carolina, Charlotte.

Republic and Morgan also ranked No. 1 and No. 2, respectively, in net income per employee and average assets per employee. Republic had net income per employee of $68,352 and average assets per employee of $5.9 million. Morgan had $51,339 in net income per employee and $5.3 million in average assets per employee.

Among the banks in the $5 billion-to-$10 billion group, Philadelphia National Bank was tops with a ratio of 1.73, based on net income, including revenue of $150.3 million from the sale of its mortgage subsidiary and noninterest expense of $260 million. First National Bank, Minneapolis, was second with an efficiency ratio of 1.90.

Among the limited-service banks, Manufacturers Hanover Bank (Delaware), Wilmington, had the best efficiency ratio of 0.33, and Morgan Bank (Delawrae), Wilmington, was second, with a 0.46 ratio.

Chemical Bank (Delaware), Wilmington, which had an efficiency ratio of 0.47, was tops among the limited-service banks in net income per employee, with $238,500 and average assets per employee of $18.9 million.

A limited-service bank, as defined for survey purposes, is one with a commercial bank charter that makes few or no commercial loans. In most cases, such banks have been used by a bank

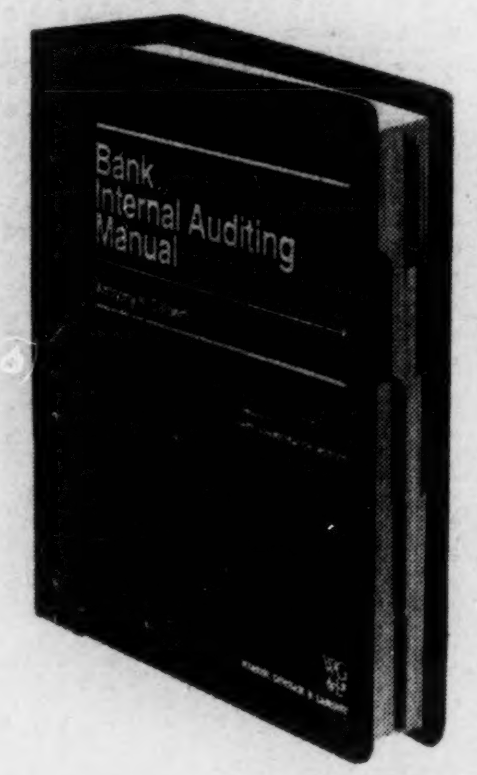
Bank Internal Auditing Manual
by Anthony N. Ciliberti, CBA
Sponsored by Bank Administration Institute

A complete "how-to" guide to all bank internal audit procedures!



If you're responsible for performing your bank's internal audits, you're well aware of the vital importance of carefully planned, tightly controlled audit programs for every banking function.

And you're also aware of the volume and complexity of the paperwork involved . . . the tough legal and regulatory requirements you must comply with . . . and the ever-present danger of costly oversights and accidental errors.

Now there's a unique, step-by-step manual you can consult for detailed, authoritative guidance. *Bank Internal Auditing Manual* presents you with practice-tested audit procedures for *every* type of function.

You'll see at a glance:
- How a specific function operates
- Your objectives in auditing that function
- How often and to what extent the audit should be performed.

Moreover, the *Manual* gives you all the forms and checklists you'll need—in the order you'll need them. It's an easy-to-use looseleaf "workbook" you'll use immediately. And because it's sponsored by Bank Administration Institute, you can be sure it sets a new industry standard for practicality, reliability, and broad scope of coverage. Plus, *free* updates guarantee you're always informed of the latest procedures and guidelines.

GE Credit Names Hale Head of Corporate Finance Services

By ROBERT M. GARSSON

NEW YORK — General Electric Credit Corp. has named Dan L. Hale senior vice president in charge of its corporate finance services division, succeeding Michael R. Dabney, who resigned earlier this week to join Bear, Stearns & Co.

Mr. Dabney's resignation comes only three months after his unit was elevated from a department to a division, a move that placed him in a position of reporting directly to GE Credit's chief executive officer, Robert C. Wright. Previously, he had reported to an executive two levels below Mr. Wright.

Corporate finance is responsible for mergers and acquisitions, divestitures, and leveraged buyouts — services that are also offered by Kidder, Peabody & Co. General Electric Co. has agreed to acquire an 80% stake in Kidder, which will become part of General Electric Financial Services Inc., the GE subsidiary that also owns GE Credit.

Although Mr. Dabney's promotion in February had been interpreted as signaling GE's intent to become more active in investment banking, a company spokesman said Thursday the restructuring was unrelated to the Kidder Peabody acquisition.

Mr. Hale had been a senior vice president in charge of GE Credit's commercial finance division, a unit that was in some ways similar to corporate finance.

For example, he had responsibility for leveraged buyouts and also held the title of managing director of Capital Markets Group Inc.

He will now assume the additional role of president of Acquisition Funding Corp. Both Acquisition Funding and Capital Markets are subsidiaries of GE Credit.

In a statement issued yesterday, Mr. Wright cited Mr. Hale's experience in leveraged buyouts and corporate finance as a reason for his promotion.

"Dan has played a major role in the strategy, organizational development, and growth of GE Credit's leasing business and corporate finance responsibilities," Mr. Wright added. ■

holding company to handle a particular function, such as credit card operations, and to escape usury ceilings and gain tax advantages.

Poorest Rating at a Denver Bank

For the banks with net income for 1985, the poorest efficiency ratio was 546.84 for Colorado National Bank, Denver. The bank, which ranked 236th in deposits, with $1.1 billion on Dec. 31, reported net income of $121,000 and noninterest expense of $66.2 million. Colorado National is a subsidiary of Colorado National Bankshares Inc. The holding company reported a 76% decline in earnings to $5.4 million last year and attributed the sharp drop to "the increase in the provision for loan losses, which reflects the severe economic problems being faced by the company's borrowers in the agriculture, energy, and real estate development industries."

Among the 25 banks with the poorest efficiency ratio, the ratio ranged from the already mentioned 546.84 at Colorado National to 8.84 at First National Bank of Maryland, Baltimore.

Among the banks in the top 300 that lost money in 1985, the poorest efficiency ratio was -71.43 for Mellon Bank (East), Philadelphia. It was followed by the First Bank of South Dakota, Sioux Falls, with a -22.66 efficiency ratio.

InterFirst Bank Houston had the highest losses per employee, losing $82,960 per employee. The First National Bank & Trust Company of Oklahoma City was second, losing $65,022 per employee. ■

How Productivity Was Measured

Productivity is a measure of output per unit of input, where output is either goods or services and input is labor, (capital) equipment, or both.

In banking, net income is the output, and noninterest expense — salaries and employee benefits, expenses of premises and fixed assets, and all other operating expenses — is the input.

The simple ratio of noninterest expense to net income, commonly called "the efficiency ratio," measures the cost of bringing $1 to the bottom line.

The efficiency ratio is one of three productivity measures used in today's study. In addition to the efficiency ratio, two measures of labor productivity are used in the study. They are net income per employee and average assets per employee.

Consumer Group Seeks Law to Limit Check-Holds

WASHINGTON (UPI) — A national consumer group has urged Congress to pass legislation to stop banks and thrifts from making customers wait days, and sometimes weeks, before getting access to money deposited by check.

The U.S. Public Interest Research Group released a study, titled "Still Held Up At the Bank," that found 53% of the 458 banks and savings and loans in 11 geographically diverse states hold local checks for three to five business days.

According to the study, out-of-state checks are held for more than a week at 76% of the institutions and for more than two weeks by 20% of the banks. Half of the banks hold out-of-state cashier's checks more than three business days.

Out-of-state cashier's checks are held more than one week at 37% of the banks, while 17% hold government checks more than three business days.

Consumers writing checks on these held funds are subjected to bounced check fees averaging $14.97 per check and sometimes as high as $27.50, the study said.

The consumer group said Congress should pass legislation placing strict ceilings on check-hold periods paralleling the one to two days required for banks to collect their funds. ■

Random Thoughts

By SANFORD ROSE

See what a drop in interest rates can do! In 1982 the nation's federally insured thrifts — savings and loans and savings banks — lost a net of nearly $5 billion. Last year they made a net of almost $4.5 billion.

As soon as rates plunged in 1982, thrift fortunes began to revive. The year 1983 witnessed a nearly $7 billion turnaround in the bottom line, as thrifts pushed earnings to $2 billion. Then rates rose in 1984, and net income dipped to $1.7 billion. Last year's interest rate retreat once again hoisted the bottom line, which soared to 258% of the 1984 level.

These figures, derived from regulatory sources, are soon to be released by the firm of Lyons, Zomback & Ostrowski, the bank and thrift analysts who put out a Depository Institutions Performance Directory, published by Warren, Gorham & Lamont. According to these data, the nation's federally insured thrifts earned a median return of 65 basis points on assets last year, compared with 35 basis points in 1984.

2 Morgan Bankers Top '85 Pay Parade

Combined Compensation for NY Bank's Chairman and President Is $2.19 Million

By L. MICHAEL CACACE

NEW YORK — J.P. Morgan & Co. became the first banking firm to pay its top two executives more than $2 million in combined compensation last year. Lewis T. Preston, Morgan's chairman of the board, and Robert V. Lindsay, the firm's president, had combined pay for 1985 services of $2.19 million, up 21.8% from $1.79 million paid for their 1984 services.

Executive Pay at Top 50 Banking Firms
Listing Starts on Page 27

The previous record high was $1.94 million paid to Citicorp's top two executives in 1983. In 1978, Citicorp was the first banking firm to break the $1 million barrier in combined pay of its top two executives.

Also, Mr. Preston retained his ranking as the highest-paid banker for the second consecutive year, earning $1.25 million for his 1985 services, up 22.5% from the $1.02 million he earned for his 1984 services. Mr. Lindsay ranked seventh in remuneration, earning $938,750 last year, up 21%

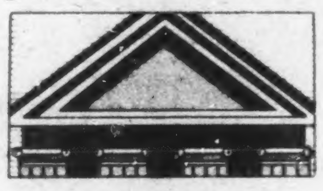
High Court Says Standby Letters Aren't Deposits

Ruling Averts Liability Crisis for FDIC, Assessment for Banks

By BARTLETT NAYLOR

WASHINGTON — The Supreme Court decided on Tuesday that the estimated $105 billion in outstanding standby letters of credit, a form of guarantee issued by banks, are not deposits.



Litigation

Ruling 6-3 in a case known as FDIC v. the Philadelphia Gear Corp. (85-1972), the high court overturned a federal appeals court's order that such letters are equivalent to deposits insured by the Federal Deposit Insurance Corp.

The decision steered the FDIC clear of a liability crisis and the banking industry clear of potential new insurance premiums and reserve requirements. If it had lost the Supreme Court case, the FDIC said it could have been required to insure as much as $120 billion of standby letters of credit for banks nationwide, and banks might have had to pay as much as $100 million more in FDIC assessments.

The FDIC has never fortified its insurance reserves to back the burgeoning business in standby letters of credit. Nor has the Federal Reserve required banks to keep any cash reserves on letters of credit. The Fed requires that at least 3% of traditional deposits be held in reserve.

A standby letter of credit is a form of commercial guarantee issued by a bank to back up a contract between two companies. In this case, Orion Manufacturing Corp. purchased oil pumps from the Philadelphia Gear Corp. for oil drilling in Oklahoma and Texas. To back up its promise of payment, Orion

FOOTNOTES

Executive remuneration, as defined by American Banker, is total compensation — whether current or deferred — paid or credited for services during 1985 to the two highest paid officers of the organization.

Included are the following: salary, bonus and incentive payments, profit sharing, and all other remuneration such as insurance premiums, club membership fees, and tax service fees paid by the corporation for the executive.

Excluded are the following: pension plan payments; retirement plan payments or accruals; stock options exercised; stock appreciation rights; and contingent long-term bonus payments which are based on the company's performance for a period greater than one year.

The American Banker ranking is based on total remuneration paid to the top two executives of the company. The corporation's rankings for both 1985 and 1984 are shown to the right of the corporation's name. Total remuneration for the top two executives, for both 1985 and 1984, is reported to the nearest dollar in the column entitled "Compensation". The compensation paid for executives number one and number two for both 1985 and 1984 appear beneath their respective pictures.

The column labeled "Earnings" represents the net income of the corporation for 1985 and for 1984. Earnings are reported in millions of dollars. The 1984 net income figure is the figure reported by the corporation in 1985 and has not been revised for mergers or changes in accounting principles.

The column labed "Assets" are the total year end assets of the corporation in billions of dollars. Again, the 1984 data are as reported in 1985.

The row labeled "Change" shows the respective percentage changes in compensation, earnings, and assets.

Footnotes that are relevant to the compensation figures reported for each executive appear in the row labeled "Notes". Footnotes which refer to 1985 data are capitalized and footnotes referring to 1984 data are lower case.

The titles shown for the executives are those for which they received compensation, excluding directorships. Title abbreviations are listed below.

No 1984 data are shown for an executive, if he was not one of the two highest paid in his company in 1984.

	Title abbreviations
CAO	Chief Accounting Officer
CEO	Chief Executive Officer
CEx	Chairman of the Executive Committee
Ch	Chairman of the Board
CM	Chairman of the Management Committee
COO	Chief Operating Officer
DCh	Deputy Chairman of the Board
EVP	Executive Vice President
HC	Holding Company
Pr	President
Sec	Secretary
SE	Sector Executive
SEVP	Senior Executive Vice President
SrCh	Senior Vice Chairman of the Board
Tr	Treasurer
VC	Vice Chairman
VP	Vice President

NOTES: Footnotes pertaining to 1985 remuneration are capitalized, and footnotes pertaining to 1984 remuneration are shown in lower case. These footnotes are listed below.

G,g	Includes latest salary during the year, at an annual rate, for an officer hired or promoted during the year.
H,h	Also received a bonus in stock.
P,p	Includes salary at an annual rate for an officer who left the firm, retired, or died during the year.
N,n	Also credited with contingent, deferred compensation, based on the long-term performance of the company. This compensation is not included in the figures above.
R,r	Also granted stock options.
S	Exercised stock appreciation rights.
T,t	Stock options exercised during the year.
u	Includes amounts earned on deferred compensation attributable to prior years' performance, as reported in the corporation's proxy.
V,v	Includes cash value of award in stock.
x	1984 data revised by the corporation. 1984 rank is based on the revised data.
Y,y	Also received dividends on restricted stock shares, which are not included.
Z	Also received dividends on restricted stock shares. Data from proxy did not identify the amount, therefore dividends are included.
★	Data and rank for 1984 are pro forma.

* — Includes total dollar amount of salary, bonus or incentive payments, profit sharing, and all other remuneration (such as insurance premiums, club membership fees, and tax service fees paid by the corporation for the executive), whether current or deferred, attributable to services in 1985. Excluded are pension plan payments or accruals; stock options exercised; contingent, long-term performance awards; and amounts expensed as compensation arising from stock appreciation rights.

➻ **Continued from Page 1**

from the $775,750 he earned in 1984 when he ranked ninth.

These are some of the findings of the *American Banker's* annual survey of remuneration of the two highest-paid officers at each of the top 50 bank holding companies, ranked in terms of executive compensation.

Morgan — the nation's fifth largest banking firm in assets, with $69.4 billion on Dec. 31, and the second largest in earnings, with net income of $705.4 million in 1985 — was the top firm in executive compensation for the second year in a row. Its gain in executive remuneration was attributable to the 31.2% growth in Morgan's net income last year.

The *American Banker* also finds deregulation is helping to raise the compensation paid to bank executives. Deregulation has allowed banks to compete more effectively in the financial services arena, giving banks greater opportunities to increase earnings. And since more than 80% of the growth in executive compensation at the top 50 firms is explained by the growth in bank earnings, higher bank earnings mean higher salaries to the executives who generate those earnings.

For example, since deregulation — or the period 1981 to 1985 — compensation paid to the top two executives at the nation's top 50 banking firms has risen 40%, while net income at the top 100 firms has jumped up 55%.

The Hay Group, a worldwide human resources consulting firm based in Philadelphia, finds that both the growth and the level of compensation paid to bank executives at midsize banking firms have surpassed the growth and level of salaries at midsize insurance firms and industrial firms over the period 1981 to 1985. Average pay of an executive at a midsize bank, as shown in the Hay Group study, rose 30.3% over the period from $166,100 in 1981 to $216,400 in 1985.

Over the same period, pay to insurance executives rose 20.1% from $159,400 to $191,400, and pay to industrial executives at midsize companies rose only 4.4% — from $192,600 to $201,000.

According to Daniel Glasner, a vice president at the Hay Group, the difference in growth "is due, in part, to the difficult period for industrials." But, he adds, it seems clear that deregulation in the financial services industry also played an important role.

Executive remuneration, as defined by the *American Banker*, is total compensation — whether current or deferred — paid or credited for services during 1985 to the two highest-paid officers of the company. Included are salary, bonus incentive payments, profit sharing, and all other remuneration related to 1985 services. Excluded are pension plan payments, retirement plan payments or accruals, stock options exercised, stock appreciation rights, and contingent, long-term bonus payments.

For example, the *American Banker* did not include in its 1985 remuneration totals for Mr. Preston and Mr. Lindsay the value of their stock options exercised. For Mr. Preston, stock options exercised totaled $94,699 in 1985, and for Mr. Lindsay the amount was $686,353.

Among the 100 executives in the survey, 61 were granted stock options in 1985, and 36 exercised their options. The value of these exercised options totaled $5.6 million last year for 33 of the 36 executives for which data were available, up 12% from $5 million reported by 26 executives in 1984.

The 10 Highest Paid Bankers

Among the 10 highest-paid bankers, three earned more than $1 million last year, compared with one in 1984. In addition to Mr. Preston, Willard C. Butcher, the chairman of the Chase Manhattan Corp., earned $1.13 million in 1985, up 27.3% from the $889,351 he earned in 1984. And Alfred Brittain 3d, the chairman of Bankers Trust New York Corp., earned $1 million, up 19% from the $842,400 he earned in 1984.

New York banks were the home of eight of the 10 highest-paid bankers in the nation last year, while California was the home for the other two bankers in the top 10.

R.J. Flamson 3d, chairman of Security Pacific Corp., was the highest-paid non-New York banker and the fourth highest paid overall, earning $970,634 for 1985 services. This was up 5.6% from the $919,500 he earned in 1984, when he ranked as the third-highest-paid banker in the nation.

Of the 10 highest-paid bankers, the three youngest ranked fifth, ninth, and 10th. In fifth place, John S. Reed, the 47-year-old chairman of the nation's largest banking firm, Citicorp, earned $969,500 in 1985, up 37.5% from $704,867 earned in 1984. Charles S. Sanford Jr., the 49-year-old president of Bankers Trust, ranked ninth with $836,600. Thomas C. Theobald, the 48-year-old vice chairman and sector executive of Citicorp was 10th with $827,833 in executive compensation.

Among the 50 highest-paid executives in the survey, the youngest were Alan S. Fellheimer, the 42-year-old chairman, chief executive officer, and president of Equimark Corp., Pittsburgh, and John B. McCoy, the 42-year-old president of Banc One Corp., Columbus, Ohio.

Mr. Fellheimer replaced James D. Lowry as chairman in July of 1985, when Mr. Lowry resigned. Mr. Fellheimer was paid $635,113 last year, and Mr. Lowry received $522,933. Their combined compensation of $1.16 million ranked Equimark 23d among the top banking firms in compensation last year, up 63 places from 1984, when the company's top two executives — Mr. Lowry and William E. Bierer — had combined compensation of only $532,247.

Mr. McCoy earned $492,267 last year, an increase of 18.8% from 1984. Banc One ranked 38th in executive remuneration of its top two officers, with $970,878 last year, up from $817,944 in 1984, when it ranked 40th.

Among the 50 second-highest-paid executives, the youngest was 41-year-old Zuheir Sofia, president of Huntington Bancshares Inc., Columbus, Ohio. Mr. Sofia earned $333,200 last year, up 20.9% from $275,650 in 1984. Huntington Bancshares, with $902,200 paid to its top two officers, ranked 50th among banking firms in executive pay last year.

Among the top 50 firms, the average age of the highest-paid executive was 56.7 years. And the average age of second-highest-paid executive was 52.6 years.

Top Firms in Executive Compensation

Following J.P. Morgan in remuneration of its two top executives were three other New York City-based firms: the Chase Manhattan Corp., Bankers Trust New York Corp., and Citicorp.

Chase had a 27.1% gain in remuneration paid its top two executives, moving it into second place in executive remuneration, with $1.94 million paid to its top two executives in 1985. This compares with $1.53 million paid a

The Bond Buyer Municipal Bond Index

	May 27, 1986	May 23, 1986	May 20, 1986
Index	N.A.	N.A.	N.A.
Yield	N.A.	N.A.	N.A.

The Bond Buyer Municipal Bond Index was designed by the Chicago Board of Trade to serve as the basis for trading Long-Term Municipal Bond futures contracts when approved by the Commodity Futures Trading Commission. The Index represents an average of the figures obtained when the price of each of 40 select term bonds is divided by a figure derived from the amount at which the bond would be priced to yield 8%. In all computations, the maturity of a bond is represented by its first call at par. The Index is computed daily and is quoted in points and 32nds.

trend output indicating the percentage of "yes" answers to each question for every employee, branch, and region in the system.

3. Employee surveys. Complaint analysis and customer surveys offer the customer's perspective of the bank's quality of service. Equally important — and frequently overlooked — is the service provider's perspective. The service provider's views can provide rich insight into the causes of service quality problems. Whereas customers may report that contact personnel appear unmotivated to please customers, only the contact personnel know *why* they are unwilling to work hard to please customers. Maximizing the benefits of quality measurement requires investigation of the "why" issues, not just the "what" issues.

Surveying employees is important for another reason as well. Since contact employees are the "customers" of various internal support services, they are in the best position to assess the quality of these "intermediate" services. Two sets of service quality customers must be satisfied in banking: external customers and internal customers. The internal customers are the customer contact employees who depend on operational support services to serve external customers. Monitoring the quality of intermediate service is imperative for any bank management serious about improving quality of service.

I recommend a periodic employee tracking survey that would include such questions as the following:

- If you could make one change at the bank to improve the overall level of employee motivation, what change would you make?
- What is the biggest problem you face day in and day out trying to deliver a high quality of service?
- If you were president of the bank and could make only one change to improve service quality, what change would you make?

Actions speak louder than words in the development of an organization's culture. There is much talk in banking today about quality of service. But talk alone will not produce the service-minded culture many senior bank executives have in mind. People in organizations learn what is important by what managers do more so than by what managers say.

One way for bank executives to encourage quality of service is to measure it. Employees get the message that management is serious about quality if management keeps score. The scorecard is *real*. When management links the measurement system back to service standards, and forward to service rewards, then it is all the more clear that quality counts! ■

Dear Reader, How Are We Doing?

The American Banker wants very much to make sure its coverage of the financial services industry meets your information needs. So would you spend a moment to give us some feedback on the **Executive Remuneration at the Top 50 Banking Firms** survey that appears in today's edition? Over the past year we have incorporated many of your suggestions to provide more meaningful information. Please return this questionnaire to L. Michael Cacace, Statistical Chief, American Banker, One State Street Plaza, New York, N.Y. 10004 (212) 943-4836.

Company Act, to dictate the activities that a bank holding company may engage in directly or through a nonbank subsidiary, which are limited to activities determined to be "closely related to banking." But it can be argued that the Fed's authority under the holding company act does not reach activities conducted by a bank subsidiary. Those activities, some contend, are regulated solely by the Comptroller (if a federally chartered bank) or the state regulatory authority (if state-chartered).

FDIC May Impose Own Limitations

Since all District banks must be insured, the FDIC may impose limitations of its own. The FDIC has in the past imposed conditions upon the affiliations of insured state non-Fed member banks with companies engaged in securities activities, for the purpose of protecting the safety and soundness of the banks. Under a rule adopted in November 1984, the FDIC limited investments by insured nonmember banks in securities subsidiaries to "bona fide" subsidiaries and restricted the underwriting activities of those subsidiaries to investment-quality debt and equity issues and certain investment companies and money market funds. Restrictions also were placed upon affiliations with securities companies, transactions with securities subsidiaries or affiliates, and certain tying arrangements with securities subsidiaries or affiliates. These restrictions will somewhat limit the leeway otherwise allowed District banks.

The new banking law offers a clear route for the entry of money center banks into the District financial market if they are willing to invest substantial resources in the local community. In return, the money center banks are offered the freedom to greatly expand their financial products and services in a market that presents tremendous opportunities for profit. Whether the Fed and other regulatory agencies will permit acquired District banks to engage in the full scope of nonbanking activities permitted by District law, however, remains to be seen. ■

year earlier when it ranked fourth. The gain was attributable to the 39.2% increase in net income last year.

Bankers Trust also moved up two notches to rank third, with $1.84 million in compensation paid its top two executives. This was a jump of 25.9% from the $1.46 million figure in 1984. Bankers Trust had an 21% gain in net income last year.

Citicorp, which had ranked second in 1984, fell to fourth place, with $1.8 million in remuneration of its top two executives. This figure was up 10% from the $1.63 million paid in 1984. In 1984, its former chairman and second highest paid banker in the nation, Walter B. Wriston, retired.

Among the top 50 firms in the listing, 12 are from New York; six are from California; five are located in Pennsylvania; four are in Ohio; three each are in Illinois, Massachusetts, North Carolina, and Texas; two each are in Minnesota and New Jersey; and one each in Arizona, Connecticut, Florida, Georgia, Hawaii, Michigan, and Rhode Island.

The emergence of the superregional banking institutions had very little im-

had Penn Square Bank, an Oklahoma energy lender, issue a standby letter of credit.

But Penn Square failed on July 5, 1982, and when Orion failed to make good on its payment, Philadelphia Gear filed a claim against the FDIC.

The 10th U.S. Circuit Court of Appeals ordered the FDIC to pay $145,200 to Philadelphia Gear based on its ruling that a letter of credit amounts to a deposit under federal law.

Justice Sandra Day O'Connor's majority opinion overturning the appeals court's order was rooted in an analysis of the FDIC's history. Congress' focus was in "safeguarding the assets and 'hard earnings' that businesses and individuals have entrusted to banks," Ms. O'Connor wrote. "This purpose is not furthered by extending deposit insurance to cover a standby letter of credit which involves no such surrender of assets or hard earnings."

Dissenting, Justice Thurgood Marshall wrote that the court's "common sense" conclusion relies on reading "qualifications into the statute that do not appear there." Joining Mr. Marshall in the split decision were Harry Blackmun and William Rehnquist.

Bank lobbyists have been pressing Congress to clarify that standby letters are not deposits.

"We may fortify the Supreme Court's decision anyway," said M. Danny Wall, staff director on the Senate Banking Committee. The Senate panel is expected to take up an omnibus banking bill in June, Mr. Wall said.

Money center banks and other firms that have entered the standby-letter-of-credit business can "stop worrying about reserve requirements," said John Gill, the American Bankers Association's general counsel. The ABA filed an argument before the Supreme Court on behalf of the FDIC, as did the California Bankers Clearing House Association and the New York Clearing House Association.

"The fact that you won't have to hold reserves will help make them [standby letters] part of a complete array of financial services," said Richard Whiting, regulatory counsel at the Association of Bank Holding Companies. "The banking industry should be pleased."

"This removes a significant cloud from our heads," said C.G. Hagen, treasurer of United Virginia Bankshares, Richmond, which has issued about $125 million worth of standby letters.

The business of issuing standby letters of credit has doubled in the last five years, from about $49 billion to $105 billion in 1985, according to figures from the FDIC. Exactly how large the market is, however, is subject to estimate because standby letters are off-balance-sheet activities that don't figure into a bank's normal financial accounting.

At multinational bank holding companies, this one off-balance-sheet activity accounts for as much as 15% of total assets, according to the FDIC.

The decision is likely to help the FDIC in its case against shareholders disgruntled after the failure of the Jake Butcher banking empire in Tenessee. In that case, known as Allen v. the FDIC, William H. Allen and other shareholders of the Farmers Deposit Bank of Brandenburg, Ky., sold their shares to C.H. Butcher Jr. for a combination of cash and notes. Mr. Butcher's notes were backed by standby letters of credit issued by the United American Bank in Knoxville, run by C.H. Butcher's brother, Jake. Following the failure of United American, the FDIC rejected Mr. Allen's claim that the letters were insured deposits.

The Supreme Court decision "obviously helps us," said an FDIC attorney.

Tuesday's decision by the Supreme Court also removes a threat of taxation on municipal bond holders. Standby letters back up a sizable portion of the $500 billion in outstanding municipal bonds, especially industrial revenue bonds and variable-rate municipal bonds.

The 1984 tax act eliminated the tax-exempt status of municipal bonds that are guaranteed in some way by the federal government. The new tax rule was delayed pending the Supreme Court decision. ■

Salaries . . .

➸ Continued from Page 35

pact on the rankings of the top 50 firms in executive compensation. The only superregional to make the list for the first time was the Bank of New England Corp., Boston. Executive pay of its top two officers rose 93.4% last year to move it 52 places to rank 37th, with $987,737. Of that total, $564,354 was received by Walter J. Connolly Jr., chairman of the corporation and of Connecticut Bank & Trust Co., Hartford. Peter H. McCormick, the vice chairman and president of the company and chairman of the Bank of New England, received $421,383.

First Wachovia Corp. — a new company formed on Dec. 5, 1985, when Wachovia Corp., Winston-Salem, N.C., and First Atlanta Corp. merged — is also a new superregional in the listing. But Wachovia Corp. ranked 47th among the top 50 firms in executive pay in 1984. First Atlanta ranked 56th in executive pay that year.

In 1985, First Wachovia ranked 27th, with $1.07 million paid to its two top officers. John G. Medlin, First Wachovia's president and chief executive officer, received $540,000; and Thomas R. Williams, the company's chairman, received $527,867. On a pro forma basis, First Wachovia would have ranked 26th in executive pay in 1984. ■

US Trust Co. of New York Names a New President

NEW YORK — H. Marshall Schwarz, 49, has been named president of the U.S. Trust Company of New York.

He succeeds Daniel P. Davison, 61, who will continue as chairman and chief executive officer.

Mr. Schwarz was group operating officer of the company's asset management business. Before that, he ran the trust banking group.

Mr. Schwarz joined the bank in 1967 from Morgan Stanley & Co.'s underwriting department. He was promoted to vice president of U.S. Trust in 1970, to senior vice president in 1972, and executive vice president in 1977. He was also elected to the board of trustees in 1977.

In other executive moves, U.S. Trust said James C. Bacon, Donald M. Roberts, and Frederick S. Wonham, currently executive vice presidents, were elected to the the board of trustees, and Jeffrey S. Maurer was elected an executive vice president and group operating officer of the asset management group. ■

HATS OFF TO AMERICA'S BANKERS.

Thanks to your support, sales of U.S. Savings Bonds reached $4 billion last year —the highest level since 1980. That's good news for *all* Americans.

By issuing U.S. Savings Bonds, you're helping the Treasury manage the national debt more effectively—while saving taxpayers' dollars. You're also offering your customers one more way to increase their savings. And remember, Bonds also help your customers save for larger investments that in turn enhance *your* assets.

The year ahead should be an even better one for U.S. Savings Bonds. As the re-designed Series EE Bond is introduced throughout the country, it will make it easier to process Bonds—improving service to you and your customers.

We are grateful for your continued support of our program and your commitment to our nation's prosperity. As shareholders in America's future, each of us benefits from the role U.S. Savings Bonds play in building a strong, secure economy.

Along with Pain, Tax Plan Offers Opportunities

By BARTLETT NAYLOR

TAXES
Bracing for Reform

WASHINGTON — What opportunities does the tax reform bill that's steaming through Congress hold for the financial services industry?

On Thursday, Senate Finance Committee chairman Sen. Bob Packwood, R-Ore., forecast at a press conference that his bill could fuel the economy.

Although banks and thrifts can expect to pay new taxes, executives and industry analysts contacted cite several areas promising new profits:

- Banks will focus on high-yielding investments, including direct loans to take advantage of lower tax rates.
- Municipal bond portfolios will be retained, but new securities investments will be made in private issues.
- Mortgage and home equity lending will surge, as interest deductions for other consumer loans are restricted.

Next week, the full Senate is slated to debate a bill approved May 8 by the tax-writing Senate Finance Committee. For all corporations, the measure reduces the tax rate from 46% to 33% of income. It also mandates accrual accounting, imposes a strict new minimum tax, and limits foreign tax credits.

The Senate bill does retain the current deduction for loan loss reserves for banks, but reduces the deduction for thrifts. The bill eliminates many important tax incentives for real estate investment, jeopardizing existing and new loans to commercial construction.

52% of Nation's 300 Largest Thrifts Now Stock Companies, Survey Shows

Growing Need to Raise New Capital Cited in Shift from Mutual Ownership

By IRENE APPELBAUM

NEW YORK — More than half of the nation's largest thrifts are now stock-owned, according to the *American Banker's* survey of the top 300 U.S. thrifts. The survey ranks savings and loan institutions and savings banks by their deposits and assets on Dec. 31, 1985.

Ranking the Top 300 Thrifts
Section starts on Page 23

The 52%, or 155, of the top 300 thrifts that were stock companies at yearend 1985 compares with 32% that were stock companies two years earlier. Those 155 thrifts include 120 savings and loan institutions and 35 savings banks.

This pattern reflects a continuing and rapid trend of conversion to stock companies in the thrift industry over the past decade. In 1975, according to data published by Keefe, Bruyette & Woods Inc., less than 15% of the total number of thrifts in the nation were in stock form.

Increased capitalization seems to be the primary reason for this steady conversion from mutual to stock owner-

Hibernia Refuses Compromise with Community Group

By DAVID LaGESSE

DALLAS — Hibernia National Bank of New Orleans has refused to compromise with a community group that has objected to a pending acquisition by Hibernia.

The fight has delayed Hibernia's acquisition of Southwest National Bank of Lafayette, La., and forced Federal Reserve officials to wrestle with a complaint against Hibernia filed by Acorn, or the Association of Community Organizations for Reform Now.

Observers say this is the first time a bank has not struck a deal with Acorn. The group previously has been successful in gaining commitments from banks to invest in poor neighborhoods after filing Community Reinvestment Act complaints against institutions seeking merger approvals from the Fed. Acorn has alleged that Hibernia violated the act.

It is typical of Hibernia's management to refuse to back down from a legal fight, said Marion Smith, vice president of research for the investment

"I hear that the fastest growing credit card, EFT, and plastic card processing and embossing provider around is in Columbus, Ohio. A company called Frinkleton, I believe."

Franklinton Financial Services is only four years old, but we're already a force in the electronic transactions processing industry. Many clients have discovered the depth of Franklinton expertise, quality, efficiency and "extra-mile" commitment. And the word is getting around. It's Franklinton for: ☐ FULL SERVICE CREDIT CARD PROGRAMS ☐ ATM SERVICES ☐ CREDIT/DEBIT CARD PROCESSING ☐ PLASTIC PREPARATION.

We're here to serve. And here to stay.

Call Joette K. Kuharic at 614/863-8434 today to see how we can help you.
Franklinton Financial Services, a division of BancOhio National Bank, 4661 East Main Street, Columbus, Ohio 43251.

It's "Franklinton." And the word is getting around.

FOOTNOTES: Unless otherwise indicated by a footnote, all data are from American Banker questionnaire sent to the 500 largest thrifts in the nation. **(a)**—Also known as PSFS, the bank is in the process of changing its name to Meritor Savings Bank. **(b)**—Part of Empire of America FSB's financial service network. Empire of America FSB had consolidated assets of $8.61 billion on 12/31/85. Had the consolidated asset figure been used, Empire of America FSB would have ranked 13th in assets. Last year, consolidated assets for Empire of America FSB were used. **(c)**— On 12/31/85, First Federal Savings and Loan Assn., Minneapolis, and Minnesota Federal Savings and Loan Assn., St. Paul, merged to form a new institution. **(d)**— In Jan. 1985, Trinity Banc Savings Association acquired the $1.14 billion-deposit Texas Federal Savings and Loan Association and changed its title to Bright Banc Savings. **(e)**— On Feb. 1, 1985, Peoples Savings Bank of Portland, and Heritage Savings Bank of Waterville, merged under the charter of the latter and with the new title of Peoples Heritage Savings Bank. **(f)**— Data are from the Federal Home Loan Bank Board. Thrift was not in American Banker's data base of top 500 thrifts, therefore, 12/31/84 data are not available. **N.A.**— Not available.

Opportunities Abound Under Senate Panel's Tax Reform Plan

➼ Continued from Page 1

Consumer interest payments, except for homes, could no longer be deducted, and contributions to individual retirement accounts, or IRAs, could not be deducted except for those without a private pension.

Awaiting passage of the Senate measure, key House leaders are preparing for the compromise discussions in the conference committee, which could take place as early as July. The House's tax bill, approved last December, reduces corporate rates to 38%. For large banks, it eliminates the loan loss reserve deduction, and sharply reduces the deduction for thrifts. It also limits foreign tax credits. The measure leaves real estate relatively unscathed and leaves IRAs untouched.

The American Bankers Association, the industry's largest lobby, made fighting the House tax bill its top legislative priority. Following passage of the Senate Finance Committee bill, though, it has joined the bandwagon of support. The Washington-based group signed on with the "15-27-33 Coalition," a corporate group committed to fighting any amendments to the Senate Finance Committee bill, even those restoring IRA deductions. The coalition is named for the two individual and one corporate tax rates.

"It's not so much that we endorse the bill," says ABA representative Kirk Willison. "But tax reform is imminent and it wouldn't do us any good to fight changes."

Focusing on the Problems

Indeed, few bankers express unbridled enthusiasm for tax reform in general.

"We haven't found any really good opportunities," says Robert Schonk, chief financial officer with Sovran Financial Corp., Norfolk, Va. "We've just been focusing on the problems."

Added Kyle Legg, an analyst in Richmond, Va., with Alex. Brown & Sons, "I certainly haven't heard anybody expecting a burst in earnings."

In fact, figures Ms. Legg, the banking community is likely to lose as much as 5% of earnings following enactment of tax reform.

"It'll be higher for us," says Mr. Schonk.

One regional bank said it expected to pay an additional $12 million in tax on projected income of about $150 million.

This is another in a series of articles examining the impact of tax reform on financial institutions.

At the same time, bankers are expected to take advantage of lower corporate rate — and the elimination of traditional tax shelters — by concentrating on high yielding investments, says Douglas Stone, an analyst with Prudential-Bache Securities Inc.

"That's the bottom line: We'll see a move into higher-yielding assets," says Mr. Stone.

"We'll have to look to other sources to generate loans," says Ralph Hutchins, chief financial officer of Bank South Corp. Atlanta. "Most banks will try to expand areas where they have expertise. For Bank South, that's the small-to-medium-size corporation."

Higher Yields

Generally, banks will redirect investments to higher-yielding taxable securities. "We'll obviously not be buying any municipal securities," says Mr. Hutchins. These instruments brought banks relatively uncompetitive returns, but sheltered the firms from income taxes.

"Many banks have 30% to 50% of their securities in tax free munis. That will change," says Mr. Hutchins. Exactly how these funds will be diverted he says is to early to tell.

If consumer interest deductions are limited to home mortgages, banks and thrifts will enjoy expansion in this area, predicts Jeff Cohn, an analyst with Drexel Burnham Lambert Inc. "This is the only tax shelter available to home owners."

Concurring, Lewis Bolan, managing director of Leggat McCall Advisors Inc. in Washington, predicts home prices will rise, supporting a higher base for home equity loans.

Sidney Fox, president of Southwest Bancorp., Vista, Calif., has already steered $200 million of his bank's $325 million in assets into single-family home development loans. He's not ready to declare the tax bill a boon to this sector of lending, "but I don't think we're going to get hurt by it either."

The bank also has a mortgage subsidiary that originated $175 million in loans last year, selling most into the secondary market. Mr. Fox holds similar views for its prospects under the tax bill.

Emphasis on Mortgages

"We will see more emphasis on mortgages and home equity loans," says Mr. Hutchins of Bank South.

The burgeoning market for second mortgages, which are loans against the appreciated value of a home, will be joined by a new market in third mortgages, predicts Prudential-Bache's Mr. Stone.

Second home mortgages, whose interest would remain deductible under the Senate bill, represent another opportunity, says Mr. Schonk of Sovran. "We have a considerable amount of vacation properties in Virginia that we finance. I think we'll continue to have that business."

Greater competition in home equity loans may also force banks to reduce credit and title search requirements, an American Bankers Association representative said.

Likewise, because car loan interest couldn't be deducted by individuals under the Senate bill, banks may find an expanded market for automobile leasing deals.

Car loans might also be financed through home equity loans, says Bank of America economist Daniel Van Dyke.

Tax reform may also undermine rivals of some bank services. For example, under the Senate bill, the preferential capital gains rate would be eliminated. ABA tax expert Charles Wheeler suggested this may make certificates of deposit, or CDs, newly competitive with stocks.

"There might be a little more interest because of this," says Mr. Hutchins. "But there are so many factors involved."

Adds Mr. Schonk, "The equity investor is different from the CD investor. But we may get some of that money."

From a broader perspective, how will the tax bill affect savings? Economists are divided on whether or not lower tax rates will mean fatter deposits. Harvard University economist N. Gregory Mankiw argues that lower rates can foster savings.

Mr. Van Dyke of the Bank of America, however, says recent history holds little evidence of any changes encouraging savings. "You might have thought savings would have increased with the new money market accounts in the late 1970s, or interest rate deregulation in 1982, or the tax cut in 1981," says Mr. Van Dyke. "But it just didn't happen. I'm not sure we will see greater savings."

"Arguably, there was no additional savings after the '81 tax cut," says Mr. Wheeler. "But there was after the 1964 tax cut."

At the same time, Mr. Van Dyke predicts IRA accounts will actually surge because of the tax bill. While contributions won't be deductible, he points out that inside buildup is protected from tax. "There'll be all this money coming out of tax shelters looking for somewhere to go," he says.

The ABA's Mr. Wheeler agrees. "That's all the insurance industry is offering anyway with whole-life insurance — tax-free buildup," he says.

Wise to the quickly shifting winds of Washington, many bankers have yet to contemplate new business strategies. "We haven't taken too much notice," says Mr. Fox of Southwest. "We feel we've protected ourselves from just about anything they can do with taxes." ■

Hibernia . . .

➼ Continued from Page 1

banking firm of Howard, Weil, Labouisse, Friedrichs Inc., New Orleans.

"It's a no-nonsense, purely bottom-line oriented management," said Ms. Smith.

Hibernia did propose several steps, including check-cashing services and advertising in minority newspapers, said Charles Petrey, Hibernia's comptroller. "But we were unwilling to commit ourselves to giving any contributions to Acorn, or agreeing to let them participate in some sort of credit-granting committees," he said.

Hibernia made its proposals only after the urging of officials from the Federal Reserve Bank of Atlanta, said Michael Shea, an Acorn officer in New Orleans. "Hibernia also was unwilling to make any specific commitments in terms of money or a time line," Mr. Shea said.

Previous Acorn success stories include a contract struck with Boatmen's Bancshares Inc., St. Louis, when it sought last year to acquire General Bancshares, St. Louis. Boatmen's agreed to lend some $50 million in low-income areas.

General Bancshares had an excellent record as a lender in low-income areas, unmatched by Boatmen's, said Mr. Shea, and his group sought to preserve a source of funds for low-income loans and housing rehabilitation.

Acorn also will participate in the spending of an extra $100,000 that Boatmen's provided to community groups to help bring applicants to the low-income loans.

In turn, Acorn dropped its community-reinvestment complaint against Boatmen's, helping clear the merger with General Bancshares.

Fidelcor, the Philadelphia-based holding company, also compromised earlier this year with community groups when it sought to acquire the holding company for Independent Valley Bank & Trust Co. Acorn's Mr. Shea applauded the Fidelcor agreement as particularly useful because of commitments to more flexible loan standards.

The Hibernia dispute came to a head in a public hearing on May 3, at which Acorn coordinated testimony about alleged redlining on the part of Hibernia. Acorn provided witnesses who said they were denied loans at Hibernia, only to be granted loans by other institutions, Mr. Shea said.

Hibernia's Mr. Petrey said the group could not substantiate its claims of community reinvestment violations. "We have a clear record and feel it will stand by itself."

A delay in merger applications because of the allegations is not itself unique, said Anthony Kummerl, an assistant examiner at the Atlanta Fed. He said that the Altanta Fed's recommendation is nearly complete for forwarding to the Federal Reserve Board of Governors in Washington.

It is unusual for the Fed itself to investigate Community Reinvestment Act complaints on national banks; usually it depends instead on the periodic reviews conducted by the U.S. Comptroller of the Currency. When deemed necessary, "it's our right under the Bank Holding Company Act," said Mr. Kummerl.

Both sides say they expect the merger to win eventual approval, though Mr. Shea expects the Fed to add conditions, as it has to some other mergers that carried unresolved community reinvestment disputes.

But Hibernia's resistance to the coordinated tactics of Acorn has clearly cost the bank time, money, and bad publicity, said Acorn's Mr. Shea.

Nonetheless, said Hibernia's Mr. Petrey, "We were unwilling to give in to a group like Acorn just to expedite a merger application." ■

Thrifts . . .

➼ Continued from Page 1

ship. Though there are risks associated with stock conversion, such as vulnerability to stock market volatility as well as the potential for loss of control by management, "the ability to access additional capital tilts the scale overwhelmingly in favor of conversion," according to Henry Peltz, vice-president of Keefe, Bruyette, & Woods.

Deposits in the thrift industry continue to concentrate in the larger institutions. Though the survey's 300 thrifts make up only 8% of the total 3,614 thrift institutions in the nation, deposits at these 300 thrifts account for over 64% of the nation's deposits held in thrifts.

Of the total $938 billion held in deposits in all thrifts nationwide, deposits held in the top 300 thrifts total $600 billion. Of that $938 billion, more than $750 billion is in savings and loans and $186 billion is held in savings banks.

The $600 billion total deposits at the top 300 thrifts support about three-quarters of the total $792.5 billion asset base at these institutions. According to data provided by the U.S. League of Savings Institutions, over 90% of these deposits are retail, with balances of $100,000 or less.

The league's data also show $3.3 billion in after-tax net income in 1985 at the top 300 savings institutions in deposits, with a return on average assets of 0.48%. "With the current level of interest rates," predicts William B. O'Connell, president of the league, "these figures will continue to improve." ■

Strategic Dates
Sept. 1, 1986

FED FLOAT POLICY: One of the Federal Reserve's options used to charge banks for accrued float is dropped on this date. The option, known as "fractional availability," was devised by the Fed for calculating the cost of float caused by some checks that travel between two Federal Reserve districts resulting in a short-term, interest-free loan to the bank where the check was originally deposited. Fractional availability had come under some criticism because of inequities among the banks using the option and banks using the Fed's other check collection services. The Fed had originally planned to drop the option in January of 1985 but pressure from the American Bankers Association and 85 banks who had adopted the system forced them to delay.

Salomon's Chairman Is Highest Paid Among Financial Services Executives

By L. MICHAEL CACACE

NEW YORK — John H. Gutfreund, the 56-year-old chairman of the board, president, and chief executive officer of Salomon Inc., New York, was the highest paid executive in the financial services industry last year. He earned $3.11 million, up 32.9% from the $2.34 million he was paid in 1984.

Mr. Gutfreund's 1985 compensation was almost two and a half times greater than the 1985 remuneration received by the nation's highest paid banker, Lewis T. Preston, chairman of the board of J.P. Morgan & Co. Mr. Preston earned $1.25 million in 1985.

Florida Insurance Ruling May Aid Banks

By LYNN BRENNER

NEW YORK — Wednesday's Florida Supreme Court decision permitting insurance agents to discount their commissions is expected to have nationwide implications. According to bank regulators, one result will be to help banks compete in insurance — especially in offering life insurance.

INSURANCE
BANKS AND INSURANCE

The court ruled that the state's antirebating insurance law — which has counterparts in every other state — violates the Florida constitution.

The decision allows agents to compete for business by reducing commissions, and hence the overall cost of insurance to buyers.

It is expected to have the greatest impact on life insurance, where the agent collects much higher commissions than on other consumer coverages.

"This is a very encouraging development, because it may undermine antirebate laws and prohibitions on insurance commission splitting in other states," Ford Barrett, an executive at the Office of the Comptroller of the Currency, said in a telephone interview on Thursday.

State insurance regulators have used antirebate and anticommission split-

Bid Conference Planned to Sell California S&Ls

Thrifts in Management Program To Be Offered, Executives Say

By ROBERT LUKE

LOS ANGELES — California thrift executives said federal regulators planned to hold a bidding conference this month for several institutions in the management consignment program.

MANAGEMENT CONSIGNMENT

Federal regulators recently sold two institutions in the program: Flushing Federal Savings and Loan Association, Flushing, N.Y., which was acquired April 29 by the Long Island Savings Bank, Syosset, N.Y.; and Mariner Federal Savings and Loan Association, Seattle, which was acquired May 9 by Prudential Bank, a federal savings bank, also of Seattle.

"We were asked if we were interested in attending [the bidding conference], and I said yes," said George Rutland, president and chief executive officer of California Federal Savings and Loan Association, Los Angeles.

California Thrifts in Consignment
Listing appears on Page 16

Mr. Rutland said California Federal was approached about the conference several weeks ago by a representative of the Federal Home Loan Bank of San Francisco. Mr. Rutland said no specific date has been set for the meeting, which he said would be held in San Francisco.

SIDENOTES

Executive remuneration, as defined by American Banker, is total compensation — whether current or deferred — paid or credited for services during 1985 to the two highest paid officers of the organization.

Included are the following: salary, bonus and incentive payments, profit sharing, and all other remuneration such as insurance premiums, club membership fees, and tax service fees paid by the corporation for the executive.

Excluded are the following: pension plan payments; retirement plan payments or accruals; stock options exercised; stock appreciation rights; and contingent long-term bonus payments which are based on the company's performance for a period greater than one year.

The American Banker ranking is based on total remuneration paid to the top two executives of the company. The corporation's rankings for 1985 is shown to the right of the corporation's name. Total remuneration for the top two executives, for both 1985 and 1984, is reported to the nearest dollar in the column entitled "Compensation". The compensation paid for executives number one and number two for both 1985 and 1984 appear beneath their respective pictures.

The row labeled "Change" shows the respective percentage changes in compensation to executive number one and executive number two.

Footnotes that are relevant to the compensation figures reported for each executive appear in the row labeled "Notes". Footnotes which refer to 1985 data are capitalized and footnotes referring to 1984 data are lower case.

The titles shown for the executives are those for which they received compensation, excluding directorships. Title abbreviations are listed below.

No 1984 data are shown for an executive, if he was not one of the two highest paid in his company in 1984.

	Title abbreviations
CEO	Chief Executive Officer
CFO	Chief Financial Officer
CIO	Chief Investment Officer
CEx	Chairman of the Executive Committee
Ch	Chairman of the Board
COO	Chief Operating Officer
EVP	Executive Vice President
HC	Holding Company
Pr	President
VC	Vice Chairman

NOTES: Footnotes pertaining to 1985 remuneration are capitalized, and footnotes pertaining to 1984 remuneration are shown in lower case. These footnotes are listed below.

B	Includes bonus to join the bank.
R,r	Also granted stock options.
T,t	Stock options exercised during the year.
W	Includes contingent deferred compensation.
X	Does not include 1985 bonus.
Y	The 1984 bonus, paid in 1985, is included in the reported compensation figure for 1985.

Remuneration . . .

Continued from Page 1

of remuneration of the two highest-paid officers at each of the top 20 non-commercial-bank financial service companies. Included in this survey are brokerage firms, diversified financial service firms, insurance companies, investment banks, and thrift holding companies. On May 28, the *American Banker* published its annual survey of the top 50 commercial banking firms ranked by executive remuneration.

There appear to be two principal reasons for the differences in pay between nonbank and bank executives. First, the many years of highly regulated banking caused bankers' salaries historically to lag behind those of executives in other industries. Since deregulation, bankers are beginning to catch up, but their salaries continue to fall short of the salaries in other areas of the financial services industry.

Second is the basic difference in the nature of the businesses and their traditions. Nonbank securities firms, brokerage firms, and investment banking firms traditionally reward their executives for performance through bonuses and commissions, while banks have traditionally depended upon salary.

Studies conducted by the Conference Board — a New York-based business information service specializing in management issues, economics, and public policy — show that executive compensation in banking is a function of the size of the bank and its earnings. When banking was heavily regulated, banks had more constraints on growth in income and assets than other financial services firms.

"Since deregulation, banks have been catching up, but bankers still lag behind other financial services firms," a spokesman for the Conference Board said.

Whatever the reasons, the disparity between the two worlds becomes apparent with a look at the difference in remuneration of executives at the top nonbank firm, Salomon Inc., and the No. 1 banking firm, J.P.Morgan & Co.

Salomon and Morgan are comparable in terms of assets and earnings. Salomon, a diversified financial services company, had $88.6 billion in assets at yearend 1985 and earned $557 million last year. J.P. Morgan & Co. had $69.4 billion in assets on Dec. 31 and earned $705.4 million in 1985. But the top two executives at Salomon were paid $5.8 million in 1985, while J.P. Morgan's two top executives received $2.2 million in remuneration. (What's more, five executive vice presidents at Salomon were tied for the position of second-highest paid officers at the firm.)

Executive remuneration, as defined by the *American Banker*, is total compensation — whether current or deferred — paid or credited for services during 1985 to the two highest paid officers of the company. Included are salary, bonus and incentive payments, profit sharing, and all other remuneration related to 1985 services. Excluded are pension plan payments, retirement plan payments or accruals, stock options exercised, stock appreciation rights, and contingent, long-term bonus payments.

Other Survey Findings

- Among the 10 highest paid officers, all received compensation in excess of $1 million. Only four of the 10 highest paid bankers received more than $1 million last year. In fact, 16 of the 40 nonbank financial service executives in the listing, or 40%, earned more than $1 million in 1985, while only four of the 100 bank executives in last week's survey, or 4%, earned more than $1 million.
- Great Western Financial Corp., Beverly Hills, Calif., which ranked 11th among the top 20 firms, with $1.64 million going to its two highest paid officers, was the largest thrift holding company to make the listing. Great Western is the parent of Great Western Savings, the third largest thrift in the nation, with assets of $25 billion on Dec. 31, 1985.
- Compensation of the two highest paid executives at the top 20 nonbank financial services firms rose by almost 20% last year and totaled $41.49 million. In comparison, the two highest

ting laws to prevent national banks from sharing the commissions of agents who lease space in banks.

In many instances, banks have chosen to lease space to agents for a flat rental, rather than face legal challenges from insurance regulators and agents.

"To the extent that this kind of decision fosters competition, it will give banks getting into the insurance business more room to operate," said Richard Shaffner, product development manager at NCNB Corp.

The Florida case, Dade County Consumer Advocates versus the Department of Insurance, was brought by attorneys at Public Citizen Litigation Group, a Washington-based organization founded by Ralph Nader.

Antirebating laws have historically been a pillar of insurance marketing, and they are as entrenched an industry tradition as were fixed stockbrokers' commissions before 1975.

In an article written two years ago, a spokesman for the Florida Association of Life Underwriters described a lower Florida court decision, also declaring antirebate laws unconstitutional, as "the second biggest jolt" of his life — the first being the bombing of Pearl Harbor.

Life insurers have traditionally sought business by offering agents the highest commissions, rather than by offering policyholders the lowest rates.

Consumer advocates say antirebate laws prohibit genuine competition, forcing agents to charge the same commission to all customers. They contend the laws allow inefficient insurance agents to survive at the expense of customers.

At congressional hearings in 1981, Congressman John J. LaFalce, D-N.Y., estimated that the nationwide cost to consumers of these laws is $5 billion to $6 billion.

The Comptroller's office has closely followed the Florida case since August 1984, when the First District Court of Appeal in Tallahassee found the antirebate law unconstitutional.

The Florida ruling is the first of its kind, although a similar case is pending against California's antirebate law.

The 4-to-3 Florida decision found that antirebate laws "unnecessarily limit the bargaining power of the consuming public."

"This decision will throw into question similar laws in other states," said Mr. Barrett of the Comptroller's office, and could help banks offer insurance more competitively.

National banks in towns with populations of not more than 5,000 people and bank holding companies with $50 million or less in total assets are already allowed to sell all types of insurance, Mr. Barrett pointed out.

But in some states, this federal authorization may be contradicted by state laws, he added. "It has not been tested whether a national bank in a town of 5,000 could overcome a state law prohibiting banks to sell insurance."

A spokesman for the Florida Association of Insurance Agents said the group will appeal for a rehearing on the antirebate law decision.

"This is a very very emotional issue for agents," said Robert MacDonald, president and chief executive officer of ITT Life Insurance Corp. "They fear they'll be eliminated by institutions that can offer insurance at lower commissions."

Mr. MacDonald said he doubted this will happen. "We'll see a lot of discussion and gnashing of teeth, but I think the ultimate impact on agents will be less than feared."

He pointed out that the securities industry survived deregulation of stockbrokers' commissions, in May 1975, despite dire predictions to the contrary from many brokers.

Deregulation "created the discount brokers," he said. "I think if the Florida decision spreads nationwide, it will help more efficient small operations."

Commission competition also clearly offers advantages to any marketer able to sell in volume.

But Mr. MacDonald added that long-term deregulation of agent commissions could have a serious impact on life insurers.

"Insurance is really a commodity like a stock or a car, because it's long term," he said. "If people shop and move their policies every year, it will have a negative impact on insurers."

Because the first-year life insurance commission to the agent is often 100% of first year premium, a policy must stay with the insurer for several years before generating a profit.

The answer for life insurers, Mr. MacDonald said, is to level commissions — paying the agent a small percentage of premium for each year a policy is in force, rather than a very large commission the first year.

This is done for group life insurance policies, but not on retail sales, he said. "But our [retail] distribution system isn't efficient enough for that, because the sales are one-on-one," he added. "That's where banks could help — by making the distribution system more efficient." ■

day declined to comment, adding that supervisory matters are confidential.

However, the law firm of Stroock & Stroock & Lavan, which has offices here, said in its monthly newsletter to clients that it "has been informed that at least five of the major California MCP [management consignment program] institutions (and perhaps others) will be the subject of a bidders conference in San Francisco during the third week in June."

One thrift executive, who asked not to be identified, said he believed the institutions that would be put up for bid include Beverly Hills Savings and Loan Association, Mission Viejo, Calif.; Central Savings and Loan Association, San Diego; Southern California Savings and Loan Association, Beverly Hills; Eureka Federal Savings and Loan Association, San Carlos, Calif., and Bell Savings and Loan Association, San Mateo, Calif.

It isn't certain if the institutions will be offered as a package, or if they will be sold in parts.

"There is a lot of confusion on that point," said Anthony M. Frank, chairman and chief executive officer of First Nationwide Savings and Loan Association, San Francisco, which manages Beverly Hills Savings and Loan Association under contract with federal thrift regulators.

Asked if Beverly Hills Savings will be among the institutions to be put up for bid, Mr. Frank said: "We think so, but we're not sure. We have not been told that it will be."

Mr. Frank said it was logical that such institutions as Central and Southern California, would be put up for bid.

"When you're selling fish, you sell the oldest one first," he observed.

Beverly Hills Savings was the first to be placed under the management consignment program, under which another thrift is hired to run an insolvent institution until its problems can be worked out or a rescue merger arranged.

The program was called into service in April 1985 after what regulators described as the "rather precipitous" decline of Beverly Hills Savings. Shortly after, Central, Southern California, Eureka, and Bell were placed in the program.

There currently are 17 "MCPs," as the institutions are called, in California and 25 others across the country. The 17 California institutions reported total assets of $13.4 billion at Dec. 31, according to the Federal Home Loan Bank of San Francisco.

Peter H. Pickslay, senior vice president of Home Federal Savings and Loan Association, San Diego, which manages Eureka Federal, said a bid package was prepared for Eureka "at the request of the [Federal Home Loan] Bank Board.

"I have not received details of a bidders conference, but they usually follow preparation of a bid package," said Mr. Pickslay, adding that Eureka's package, including current financial information, was presented last week to the Federal Home Loan Bank of San Francisco.

Mr. Rutland of California Federal,

Bids: Page 17 ➸

California MCPs

The following is a listing of California thrifts in consignment and their total assets as of Dec. 31. They are listed in order of placement in program.

- Beverly Hills Savings, Beverly Hills, $2.48 billion.
- Central Savings, San Diego, 2.2 billion.
- Southern California Savings, Beverly Hills, $1.4 billion.
- Eureka Federal Savings, San Carlos, 1.68 billion.
- Bell Savings, San Mateo, $1.49 billion.
- Butterfield Savings, Santa Ana, $795 million.
- Centennial Savings, Santa Rosa, $358 million
- Presidio Savings, Porterville, $201 million.
- Golden Pacific Savings, Windsor, $43 million.
- Farmers Savings Bank, Davis, $584 million.
- Manhattan Beach Savings, Manhattan Beach, $53 million.
- Mt. Whitney Savings, Exeter, $82 million.
- American Diversified, Costa Mesa, $978 million.
- Westwood Savings, Los Angeles, $583 million.
- Gateway Savings Bank, San Francisco, $170 million.
- Columbus Savings, San Rafael, $271 million.
- Consolidated Savings, Irvine, $88 million.

Mentor . . .

➸ Continued from Back Page

Since then, Ms. Blaker says, she has discovered that she is filling a much bigger need. Ms. Gordon listed her mentor's name on an application in answer to a question of which individuals have had the greatest influence on her life.

Developing their relationship took time, says Ms. Blaker. Today, they telephone and write each other regularly, and she has visited Ms. Gordon about five or six times this year on her frequent business trips to Dallas.

"I took her to some business meetings last summer — tough meetings, but realistic ones in terms of what was accomplished and the usual frustrations that go with the turf," Ms. Blaker explains. Ms. Gordon later was able to discuss with her what went on at the meetings.

Ms. Blaker has arranged for Ms. Gordon to work this summer as a computer programming intern with Citicorp Real Estate Inc., Dallas.

"The mentor program is great," Ms. Blaker says. "Moreover, the students have much to offer each other. We should create a buddy system through which the upper-class students help the first-year students. I know Sharon would love to help."

Paul Alexander, assistant vice president for personnel in corporate financial services at Citibank, New York, says that as a mentor he has developed a good relationship with his student, Sharon Brooks. Ms. Brooks is a sophomore majoring in business with a computer science minor at Talladega College, Talladega, Ala. The two usually meet at least two or three times a year.

Offers 'Ideas, Direction, Confidence'

"Since she is a good student, I feel my role is to offer career counsel — to give her ideas, direction, and confidence," Mr. Alexander says. "The program is terrific, even from a distance."

A newcomer to the Citicorp Fellows Program is F. Karl Zavitkovsky of Citicorp Real Estate Inc., Dallas, who has been involved in the program for about three months. His student is Yolanda Thompson, a freshman majoring in computer science at Jarvis Christian College, Hawkins, Tex.

Mr. Zavitkovsky, who was in charge of 60 volunteers in the Peace Corps as regional director for Bolivia in 1969-71, says both programs have a similar approach.

"The Citicorp Fellowship program is a two-way street," he says. "I enjoy what I'm doing as a mentor, and it's rewarding to see someone grow. The program has a lot of advantages and it gives the student the opportunity to interchange ideas and get some exposure to things taking place in a large corporate company."

He adds, "Also, it gives them some new perspectives on life."

In Washington last month at a two-day gathering of the old and new mentors and students, counseling and workshop sessions were conducted. There was a session for mentors to discuss ways to improve the program. The students also held a session to discuss new ideas or problems.

"It's one way where we all met, with parents included, to help motivate the students and interchange ideas," Mr. Zavitkovsky says.

Mr. Zavitkovsky also has arranged for Ms. Thompson to work this summer at Citicorp Real Estate, learning computer-related activities in all areas of the company. ■

Beneficial Leads Finance Companies In Second Mortgage Loans, Survey Finds

By L. MICHAEL CACACE

NEW YORK — Beneficial Corp. has taken a decisive lead in the finance company market for second mortgage loans. Beneficial had $3.09 billion in second mortgage loans outstanding on Dec. 31, 1985. This was 77% more than the second largest finance company in the field, Household Financial Services, with $1.74 billion in second mortgage loans at yearend.

These are some of the findings from the *American Banker's* 36th annual survey of the top 100 finance companies in total capital funds on Dec. 31, 1985, published today. For the first time this year, the survey has been expanded to identify the top 10 firms in second mortgage lending.

Recently, the Federal Reserve Board has begun to track second mortgage loans issued by the finance companies.

Top Five Finance Companies in Second Mortgage Loans
(In billions of dollars)

Grassroots Support for IRAs Continues

Lobbyists Stand on Sidelines as Efforts to Keep Deduction Are Defeated in Senate

By PHILIP T. SUDO
and BARTLETT NAYLOR

Grassroots support continues to fuel an uphill fight for individual retirement accounts, or IRAs, as Washington's army of professional lobbyists, including consumer groups, have moved to the sidelines.

IRA WATCH

At issue is the proposed elimination of the $2,000 deduction for annual contributions to IRAs by people covered by a private pension plan, a provision in the Senate tax bill on which floor debate continues.

Three separate initiatives to retain tax incentives for IRAs were rebuffed Wednesday on the Senate floor, and observers said Thursday the fate of the popular account has substantially darkened.

Congressional offices are receiving considerable mail from constituents, most of which is independent of the organized campaigns that generally produce the most mail.

Sen. Alfonse D'Amato, R-N.Y., has received 50,000 letters, with the "overwhelming" majority favoring the full IRA deduction.

Sen. Max Baucus, D-Mont., has re-

Panel: Should Freddie Mac Sever US Ties?

Advisory Committee Will Ask Agency to Study Independence

By NINA EASTON

WASHINGTON — A 45-member advisory committee next week will ask the board of directors of the Federal Home Loan Mortgage Corp. to form a task force to study the issue of whether Freddie Mac should cut its ties to the federal government.

The move by Freddie Mac's outside advisory committee reflects a growing sentiment in the thrift industry that the $17.8 billion-asset Freddie Mac has become too large and is competing now against many of the thrifts that it was intended to serve, said advisory committee chairman Maurice Mann, who is also vice chairman of Merrill-Lynch Capital Markets.

The advisory committee, consisting of officials from various housing industries who are appointed by the Freddie Mac board, voted to make the recommendation after meeting in Washington this week.

Gray Warns Thrifts on Fixed-Rate Loans
Page 3

The committee's recommendation, which is expected to be approved, could be the first concrete step towards severing Freddie Mac's government ties. Freddie Mac's board is chaired by Edwin J. Gray, who is also chairman of the Federal Home Loan Bank Board. President Reagan's Council on Economic Advisers also has supported moves to send the 16-year-old Freddie Mac out on its own.

Freddie Mac's principal job is to inject money into the housing market by purchasing mortgages from lenders, and packaging those mortgages into se-

(b) — Year ending on date other than Dec. 31. **(c)** — Current year's figures are for a date different from preceding year.

Descriptions and Definitions

By L. MICHAEL CACACE

The *American Banker's* 36th annual survey of the finance industry is presented in seven tables.

- The main listing consists of the 100 largest firms in order of their total capital funds as of Dec. 31, 1985. Total capital funds for 1984 are also shown, along with the 1984 capital funds rank and gain in rank. The other yearend 1985 data shown in this table are capital and surplus; net receivables; total assets; net income; deferred income; gross receivables acquired; and bank credit lines available plus those in use. This year, for the first time, finance companies primarily engaged in leasing activities are included in the main listing. Eight leasing firms rank among the top 100.
- For the first time, *American Banker* lists the top 50 finance companies in total assets. The companies are listed in order of their yearend 1985 assets. Also shown is the Dec. 31, 1984, total asset figure and the percentage change in assets from 1984 to 1985.
- For the third consecutive year, *American Banker* lists the top 50 finance companies in net income. The companies are listed in order of their 1985 net income. Also shown is the 1984 net income and the percentage change in net income from 1984 to 1985.
- Another table lists the captive finance companies in the survey in order of total capital funds. **Captive companies** are those whose main function consists of financing sales of their parent firm's product or services. This year there are 36 such companies in the listing.
- A separate table lists the top 100 independent or affiliated finance companies in the survey in order of their capital funds. **Independent companies** are not owned by other companies. **Affiliated companies** are subsidiaries of other companies but are not captives.
- There is a listing of domestic commercial and savings bank-related finance companies and of foreign bank-related finance companies with capital funds of $5 million or more. Included in this table is the name of the parent banking company. By definition, bank-related companies are affiliated companies and appear on the listing of independent and affiliated companies.
- Another table breaks down the net receivables outstanding at a finance company. This year, the "types of business" categories have been increased from four to five. For the first time, *American Banker* identifies the 10 largest finance companies in personal loans secured by second mortgages. This new category is a component of the much broader category called "consumer-retail and real estate." In addition to the two consumer categories, the other three categories are: commercial-industrial; industrial and equipment leasing; and factoring. The 10 largest companies in each category are given. In this case of leasing companies there are two lists: the 10 largest nonbank-related companies and the 10 largest bank-related companies. The latter listing was constructed from data supplied to *American Banker* by Manufacturers Hanover Leasing Corp.

Receivables are reported net of loan losses and earned income, wherever possible. Some companies, however, are unable to apportion loan losses and unearned income among the various categories, and these companies report gross receivables.

For factoring companies, gross receivables — which measure the volume of business — are used. To make the top 10 listing complete, *American Banker* uses factoring data gathered by the *Daily News Record* for those companies for which *American Banker* has no data. The *Daily News Record* is a textile trade newspaper located in New York City.

Definitions

The definitions used by *American Banker* for the listings described above are listed below.

Total capital funds is the sum of stockholders' equity and noncurrent subordinated debt. Stockholders' equity is the sum of capital plus surplus. Noncurrent subordinated debt is subordinated debt with a remaining maturity of more than one year.

Receivables include direct loans and paper purchased from manufacturers, wholesalers, and retailers. **Gross receivables** include unearned income and reserves for loan losses, while **net receivables** exclude unearned income and loan-loss reserves.

Net income is income for the entire year after taxes but before extraordinary items.

Deferred income is another term for **unearned discounts.** It is the sum of prepaid interest on loans outstanding.

Bank credit lines are the sum of bank credit available plus in use. For bank-related finance companies, the bank credit line is often reported to *American Banker* as zero or not applicable, since these companies are usually funded by their parent. We report zero in this category for all bank-related companies reporting "not applicable".

Consumer-retail and real estate receivables are those obtained through the financing of the consumer through direct cash loans or through the purchase of installment sales paper from dealers and retailers. Included are **personal loans secured by second mortgages** (real estate loans) and open end (revolving) credit.

Commercial-industrial receivables are those obtained through the financing of small and medium-size businesses, including agribusinesses, through secured short-term loans. In most cases, a firm offers its accounts receivables as security, and the lending arrangement is called "accounts-receivable financing." Inventories or plant equipment also may be used as collateral.

In addition to the short-term accounts-receivable financing, businesses also receive funds on longer-term installment receivables by selling them to finance companies. These are industrial-sales finance transactions.

Industrial/equipment leasing is a type of asset-based lending where the lender owns the physical asset to be financed. Generally, longer term fixed assets are financed by finance companies via leasing.

Factoring is a type of asset-based lending where the lender buys the borrower's receivables and extends funds before their collection. The factor usually collects the receivables on a nonrecourse basis.

Finance Company Receivables

A breakdown of net receivables into four operational types: consumer-retail and real estate; personal loans secured by second mortgages, which is a component of the "consumer-retail and real estate" category;commercial-industrial; and industrial and equipment leasing. Industrial and equipment leasing are broken down into two groups — nonbank and bank-related. Factoring receivables or "volume" are reported gross. For some companies it is not possible to net out unearned discount and loan loss reserves by type. For these companies, therefore, the sum of the net receivables shown above may exceed total net receivables reported in the "Top 100 Finance Companies" listing. Complete definitions of these four operational categories appear in a story accompanying the tables.

(a)—Retail/lease financing and leasing. **(b)**—Total retail receivables, gross. **(c)** — A new category, personal loans secured by second mortgages is a component of the "Consumer-Retail and Real Estate" category. **(d)**—Commercial and industrial receivables for C.I.T. Financial Corp. were not avialable. C.I.T. ranked third among finance companies in 1984 with C&I receivables of $3.3 billion. **(e)**—Wholesale/term loans. **(f)**—Total wholesale receivables, gross. **(g)** —A subsidiary of a domestic banking organization. **(h)**—Based on response to American Banker questionnaire. This listing is incomplete, because of poor response from leasing companies. **(i)**—Source of net lease financing receivables data for bank-related lessors was Manufacturers Hanover Leasing Corpation, New York, a subsidiary of Manufacturers Hanover Corp. The data are "as reported in quarterly statements or as reported by the respective banks directly to Manufacturers Hanover Leasing Corpation." However, to make the list complete, factoring data from the Daily News Record, New York, were also used. A special footnote "j" appears after the name of the company for which Daily News Record data were used. The Daily News Record is a textile trade newspaper. **(k)** — Factoring data were taken from the Daily News Record listing of top factors published on page 22 of the edition of Feb. 4, 1986. **(l)** — A division of Bankers Trust Co., New York. **(m)** — Owned by a foreign commercial banking organization.

Beneficial Leads Finance Companies in Second Mortgage Loans

➸ Continued from Page 1

of which are second mortgage loans — totaled $30.4 billion on Dec. 31, up 15.6% from $26.3 billion a year earlier. And over the first quarter of this year, these loans are continuing to grow at an annual rate of almost 15%, totaling $31.5 billion on March 31.

The *American Banker* survey found that the top 10 finance companies in second mortgage loans accounted for more than 40% of the industry total at yearend 1985. The top 10 firms had $12.8 billion in these loans, or 42% of the industry total.

Transamerica Financial Corp., Los Angeles, with $1.5 billion in second mortgage loans, ranks third behind Beneficial, Wilmington, Del., and Household Financial, Prospect Heights, Ill. Following Transamerica is Associates Corporation of North America, Dallas, with $1.4 billion, and Commercial Credit Co., Baltimore, with $973.6 million.

Second mortgage loans have grown substantially over the past several years. They are popular with consumers because of the large sums that can be borrowed and because interest rates are lower than those on unsecured loans.

From the finance company's point of view, second mortgage loans are preferable to unsecured loans because the former have lower rates of delinquency and lower up-front costs than unsecured loans.

According to data from the American Financial Services Association, Washington, D.C., unsecured loans as a percentage of total finance company receivables have declined from 20% in 1977 to 5% in 1985. Over the 1977-1985 period, second mortgage loans have more than doubled, going from less than 4% of total receivables in '77 to approximately 9% of total finance company receivables in '85. The peak year for second mortgage loans was 1982, when they accounted for 12% of receivables. The relative decline in second mortgage receivables as a percentage of total receivables has been the surge in auto financing by finance companies over the past three years.

Other Survey Findings

- For the second year in a row, Heller Financial Inc., Chicago, the 18th largest finance company in capital funds, sustained the highest losses in the industry. It lost $32.1 million last year, after losing $181.9 million in 1984. Heller, which was acquired by Fuji Bank Ltd., Tokyo, in January 1984 for $425 million, has had substantial problems with its commercial loan portfolio. According to *The Wall Street Journal*, Fuji, the world's second largest bank, has infused an additional $725 million in capital and loans over the past two years to keep the company afloat. This additional investment by Fuji raises its total investment in Heller to $1.15 billion.

- In addition to Heller, four other firms that ranked among the top 100 lost money last year. The nation's 13th largest finance company, Commercial Credit Co., Baltimore, lost $4.8 million in 1985, compared with net income of $49.6 million in 1984. The company is a subsidiary of Control Data Corp., Minneapolis.

In April, Irving Trust Co. agreed to purchase the assets of Commercial Credit Co.'s factoring subsidiary, Commercial Credit Financial Services Inc. Irving Commercial Corp., Irving Trust's factoring subsidiary, will assume the assets. Last year, Irving Commercial Corp. ranked sixth in factoring, with $1.8 billion in gross receivables, and Commercial Credit Co. ranked eighth with $1.71 billion. If the acquisition had been made at yearend 1985, Irving Commercial would have ranked ahead of Heller Financial as the nation's second largest factoring company.

Greyhound Leasing & Financial Corp. lost $3 million last year. In 1984, the company earned $13.3 million. The Foothill Group Inc., Los Angeles, lost $5.8 million in 1985, after earning $3.2 million in 1984. And Budd Financial Corp., Troy, Mich., a subsidiary of the Budd Co., lost $4.9 million over the fiscal year ending Sept. 30, 1985. The company did not participate in last year's survey. Therefore the 1984 income data are not available.

- For the first time, finance companies that were primarily engaged in leasing were included in the listing of the top 100 firms. Eight leasing companies rank among the top 100. The largest is the 26th-ranked Chase Manhattan Leasing Co., Englewood Cliffs, N.J., with $462 million in capital funds. The company is a subsidiary of Chase Manhattan Corp.

The other six companies are: 37th-ranked Greyhound Leasing & Financial Corp., Phoenix, Ariz., a subsidiary of the Greyhound Corp.; 40th-ranked McDonnell Douglas Finance Corp., Long Beach, Calif., a subsidiary of McDonnell Douglas Corp.; 42d-ranked Philip Morris Credit Corp., New York, a subsidiary of Philip Morris Companies Inc.; 49th-ranked Equitable Life Leasing Corp., a subsidiary of Equitable Life Assurance Society of the United States, New York; 53d-ranked Bankers Leasing & Financial Corp., San Mateo, Calif., an independently owned company; 85th-ranked New England Merchants Leasing Corp., Boston, a subsidiary of the Bank of New England Corp.; and 98th-ranked John Hancock Leasing Corp., Boston, a subsidiary of John Hancock Subsidiaries Inc.

- According to data from the American Financial Services Association, 1985 marked the third consecutive

Finance Companies: Page 31 ➸

Automakers Carve Out Bigger Pieces of Financial Services Pie

By L. MICHAEL CACACE

NEW YORK — The nation's Big Three automakers — General Motors Corp., Ford Motor Co., and Chrysler Corp. — substantially increased their presence in the financial services industry last year, according to an *American Banker* survey of finance companies.

Chrysler Financial Corp., the Troy, Mich.-based financing arm of the car company, made two major acquisitions last year. On Aug. 1, the company acquired E.F. Hutton Credit Corp., Greenwich, Conn., and on Nov. 22, it acquired FinanceAmerica Corp., Allentown, Pa., from BankAmerica Corp. E.F. Hutton Credit was the nation's 47th largest finance company in 1984 with capital funds of $118 million. FinanceAmerica ranked 25th in capital funds with $400 million on Dec. 31, 1984.

E.F. Hutton Credit is now known as Chrysler Capital Corp., and FinanceAmerica is now called Chrysler First Inc. Both finance companies are subsidiaries of Chrysler Financial Corp., and are included in the consolidated data reported by Chrysler Financial.

These two acquisitions helped boost Chrysler Financial three places in rank to third position in capital funds with $2.79 billion on Dec. 31, 1985, up 98.7% from $1.4 billion a year earlier. Chrysler Financial was also helped by an infusion in capital from its parent Chrysler Corp. According to Chrysler Financial's annual report, the parent added $622.3 million to the company's paid-in capital in 1985.

The acquisitons also helped Chrysler Financial's assets to grow by more than 123% last year. Chrysler Financial now ranks fourth in assets with $15.9 billion at yearend 1985, compared with $7.15 billion a year earlier, when it ranked eighth in assets.

General Motors' finance arm — General Motors Acceptance Corp., or GMAC — expanded its financial services power by entering the mortgage servicing field. In April and May of 1985, GMAC acquired Colonial Mortgage Co., Philadelphia, and Norwest Mortgage Inc., Minneapolis, and also formed a new company called GMAC Mortgage Co., Philadelphia. By yearend 1985, GMAC Mortgage Co. ranked No. 1 in servicing with a portfolio of $20.4 billion.

GMAC is the nation's largest finance company in total capital funds, assets, and net income. Last year, GMAC had $6.56 billion in capital funds, up 10.4% from $5.94 billion a year earlier. GMAC's assets totaled $75.4 billion, up 38.6% from $54.4 billion a year earlier; and net income rose 30.1% to $1.02 billion, compared with $785 million in 1984.

Top Lender to Consumers

In addition, GMAC is the top finance company lender to consumers. It had $56.3 billion in retail and lease financing receivables at yearend 1985. GMAC also ranks No. 1 in commercial lending with $18.3 billion in wholesale loans. If GMAC were a bank it would rank fifth in commercial loans ahead of Chemical Bank, New York, which had $16 billion in business loans outstanding on Dec. 31.

According to GMAC's annual report, the company's continued "implementation of an aggressive market-oriented approach to conducting business" produced "historic operating results."

Robert F. Murphy, chairman of GMAC, states in the annual report that "the expansion of GMAC's financial services and increased commitment of resources to the marketing process will change the future of the company."

Ford Motor Co. expanded its presence in the financial services field by acquiring the nation's ninth largest thrift institution, First Nationwide Savings, San Francisco, in 1985. Ford believes that synergies exist between the auto and thrift industries. In an interview with *American Banker* last December, James W. Ford, chairman of Ford Motor Credit, said: "We saw an affinity between auto financing and the finance of housing. It was a natural extension because of the larger balances. You qualify people on almost the same basis. We think consumer finance in general is something we can do."

Ford Motor Credit is the nation's second largest finance company in total capital funds, total assets, net income, consumer receivables, and commercial receivables. Its capital funds totaled $3.3 billion on Dec. 31, 1985, up 13.1% from a year earlier. Its assets jumped up 30.3% to $31.3 billion, and net income was up 41.9% to $440.5 million in 1985. Ford Motor Credit's gross retail receivables totaled $27.2 billion on Dec. 31, and its gross wholesale receivables totaled $5.6 billion.

The automakers were not the only firms active in 1985, a year of numerous and significant mergers, acquisitions, name changes, and consolidations. Several important mergers also have taken place in the first half of 1986.

Listed below are the results reported by more than 150 surveyed companies about major acquisition activity and other changes. The results are listed chronologically.

Glenfed Financial Corp., Dallas, which ranked 52d in capital funds with $106.5 million, was formed on Jan. 1, 1985. The company is a result of the acquisition by Glendale Federal Savings and Loan Association, Calif., of Armco Financial Corp. from Armco Inc., Middletown, Ohio. Armco Financial ranked as the 46th largest finance company in 1984 with $124 million in capital funds.

In February 1985, Avco Corp., the parent of 10th-ranked Avco Financial Services Inc., Irvine, Calif., was acquired by Textron Inc.

First Nationwide Savings, San Francisco, prior to its acquisition by Ford Motor Co., acquired TranSouth Financial Corp., Florence, S.C, on May 5, 1985. The consumer finance company had been owned by NCNB Corp., Charlotte, N.C. TranSouth ranked 90th in capital funds with $33.6 million on Dec. 31.

In September, Pacificorp, Portland, Ore., a diversified holding company, acquired Norwest Acceptance Corp. from Orbanco Financial Services Corp., Portland, a commercial bank holding company.

During 1985, Gulf Oil Financial Corp., Houston, which ranked 32d in capital funds with $276.8 million on Dec. 31, 1984, was dissolved by its

Freddie . . .

➸ Continued from Page 1

curities, which then are sold to investors.

The nation's largest thrifts now have the capability to securitize their own mortgages, and many of them view Freddie Mac as competition. Freddie Mac has some $110 billion in outstanding participation certificates, the agency's primary security.

However, any move to "privatize" Freddie Mac is expected to draw strong opposition from smaller thrifts, which rely heavily on the agency.

Other elements of the housing industry also may oppose such a move.

William North, executive vice president of the National Association of Realtors, warned that cutting Freddie Mac's ties to the government could mean that less credit would be available to home buyers because fewer investors would be attracted to the market.

"You create an additional element of risk that doesn't exist [now] when you withdraw a government guarantee," Mr. North said.

Freddie Mac now exists in a gray area between a government agency and a private corporation. Its stock is owned by thrifts and by the Federal Home Loan Banks. However, the members of its board of directors are government officials, and Freddie Mac enjoys many of the benefits of government affiliation.

A key advantage over other players, said Mr. Mann, is Freddie Mac's ability to obtain more attractive financing because of an "implicit" government guarantee that it will not be allowed to fail.

"With that imprimatur, you can always borrow more cheaply," Mr. Mann said in an interview this week. Freddie Mac also has a backup line of credit with the Treasury Department.

Preston Martin, the former vice chairman of the Federal Reserve Board and the first chairman of Freddie Mac, told the advisory committee this week that he supports privatizing the agency by loosening its ties with the government and broadening the ownership of its stock. Mr. Martin said in an interview that such a move would "encourage private conduits to come into the market" to compete with Freddie Mac.

Mr. Martin said there is less of a need for Freddie Mac today because "there is a market acceptance" of mortgage-backed securities that did not exist when Freddie Mac was launched in 1970.

"Many people in the market are concerned that Freddie Mac and Fannie Mae [the Federal National Mortgage Association] are expanding so rapidly with government advantages and crowding others out of the market," said Norman Raiden, former general counsel of the Federal Home Loan Bank Board and a member of Freddie Mac's advisory committee.

"Freddie Mac is rapidly becoming a primary, not a secondary market," Mr. Raiden said. "As it takes more and more shares of mortgages, there is less and less room for portfolio lenders."

Mr. Mann added that the growth of Freddie Mac has created "an excessive amount of credit" in the home loan industry. ■

strong year for growth in consumer finance. The growth in 1985 was sparked by lower interest rates.

- The association also found that between 1977-1985, the major growth in consumer finance has been in the auto finance sector. Auto credit represents 44% of members' gross receivables, up from under 30% in 1977, according to Dr. Thomas A. Durkin, the association's chief economist and director of research.

Federal Reserve data support the association's findings. The Fed data show finance companies increasing their share of the auto financing market to 34.9% in 1985 from 31.6% in 1984. ■

Homestead . . .

➸ Continued from Back Page

early 1980s, when high interest shot down many high-flying thrifts.

In 1985, Homestead earned $15.1 million, up 6.78% from 1984 profits of $14.14 million. Earnings per share increased 7.2%, from $3.05 to $3.27. Nevertheless, 1985 earnings were below the 1983 record of $15.7 million, or $3.71 a share.

For the first quarter of 1986, earnings were $5.3 million, or 90 cents a share adjusted for a 5-to-4 stock split. That was a 410% jump from the same period in 1985, when earnings were $1.2 million, or 22 cents a share. Homestead's rapid expansion and earnings growth depended largely on brokered deposits, which have been blamed for the demise of many savings and loans.

But Mr. Weissberg believes in brokered deposits. He said that it is a more profitable way of raising money than relying on branches to attract new money in a competitive market. With staggered deposits there is no danger assets will evaporate overnight, said Mr. Weissberg.

"I can understand the controversy" about brokered deposits, he continued. "It broke a lot of savings and loans that were not experienced in handling funds or were not that experienced in real estate. But I have 41 years of experience in real estate.

"The blame is not on the broker's money. It's a question of what you do with the money. Brokered deposits are like any other loan. If you take the money and go out and buy restaurants, office buildings, race tracks, and shopping centers, you are going to lose it. You have to know what you are doing."

Accounts of $2.4 Billion

At the end of last year, Homestead had customer accounts of $2.4 billion, an increase of $1.6 billion, or 209%, over 1983, the year that the company began accepting brokered deposits. Brokered deposits declined by $33.4 million last year. In 1986, Homestead expects to replace $236 million in maturing deposits with medium-term brokered funds.

Homestead also reported a surge in growth with its real estate development subsidiary, Homestead Land Development Corp., which builds single-family homes and apartment buildings.

Mr. Weissberg said that he prefers to build his own homes, because he likes to have control over real estate development projects in which he invests. So his company buys raw land, builds the structures with its own crews, and sells them.

Homestead Savings finances the construction of single-family homes and makes loans to the buyers. Originating the loans generates fee income. The loans are then sold in the secondary market, adding to Homestead's loan servicing portfolio.

Last year, Homestead built 415 houses, nearly double the number it constructed in 1984. The company closed 273 houses last year, up from 155 in 1984, and ended 1985 with a sales backlog of 125 houses for which buyers were waiting to close escrow. It sold 275 homes in the first quarter of this year and has a backlog of 300 waiting to close escrow.

"We sell them as fast as we can build them," said Mr. Weissberg. "We offer a real fine home at a reasonable price. It is an excellent business. We will continue to buy land and build homes. It is our business as much as if we were a development company." ■

Ex-Officer of Dallas Bank Gets Probation for Fraud

DALLAS (AP) — A former assistant vice president of the Dallas Bank & Trust Co. has been sentenced to five years of probation after pleading guilty to a fraud charge.

In a pre-sentence report to U.S. District Judge A. Joe Fish, Chris Elson Jr., 35, of Arlington, Tex., admitted that a loan he improperly authorized resulted in a bank loss of $50,000.

Eight other people have been indicted as the result of a three-year Federal Bureau of Investigation probe of more than $20 million in losses by the bank during the early 1980s, federal officials said.

Five other defendants have pleaded guilty to misapplication of bank funds and kickback charges during the past two years. ■

Got a Story to Tell?

We at the *American Banker* are working on a very special project this year. To celebrate the beginnings of this newspaper, we are putting together our 150th anniversary edition to be mailed to our readers in December.

You can help. Do you know any elderly bankers or former bankers who might have anecdotes to tell our writers about how this industry, and perhaps your own institution, developed? Does your company have its own museum, staff historian, or archivist? Does anyone at your firm have a story to tell about the *American Banker* itself? (One Oklahoma banker during the Depression is reported to have paid for his subscription with a 50-pound ham!)

American Banker's 150TH 1836 1986 Anniversary

If you or someone you know has information or ideas to contribute, please call or drop us a line. We would like to hear from you by June 23 so that we will have time to follow up on your suggestions. The more input we get from our readers, the more the resulting edition will mean to you and to us.

Random Thoughts

By SANFORD ROSE

Bill Seidman, head of the Federal Deposit Insurance Corp., says flatly that he won't change agency policy on disclosure of bank CAMEL ratings. (CAMEL, an acronym standing for capital adequacy, asset quality, management, earnings, and liquidity, is a bank rating system employed by examiners, with CAMEL 1 implying excellent health and CAMEL 5 signifying an in extremis situation.)

The FDIC began a few years ago disclosing these ratings to bank directors — a rather obvious imperative that is, however, still ignored by the other regulatory agencies. That's right! Hard as it is to believe, directors of, say, national banks still have no access to their own banks' ratings.

But Mr. Seidman won't go any further. He won't publish the FDIC ratings or even allow the banks to publish them on their own.

That seems bad policy. The Shadow Financial Regulatory Committee, a group of ex-regulators, lawyers, and economists organized to second-guess regulatory doings, agrees that it's bad policy and has

Random Thoughts: Page 4 ➸

Citicorp Faces Difficult Task in Attempt To Profit from In-Store Teller Machines

CitiExchange, a Subsidiary, Will Run Network Purchased from a Texas Partnership

By MICHAEL WEINSTEIN

NEW YORK — Citicorp says it plans to develop a network of in-store automated teller machines into a money-making operation, but it will be no easy task, according to industry experts.

Last week, the Federal Reserve Board approved Citicorp's application to acquire Northeast Exchange Ltd., a Texas limited partnership that operates about 40 ATMs in Pathmark supermarkets around New York.

Citicorp has set up a subsidiary, CitiExchange Inc., to run the network, which is now losing money.

The ATMs in the Northeast Exchange are available to some 30 financial institutions, mainly in New Jersey, and Citicorp hopes to bring in more institutions and make money by charging them transaction fees.

"There's no other reason to be in the business," said a banker at Citicorp. "There's no grand strategy other than that, in the end."

"History says that's a very difficult way to make a profit," said Richard N. Speer, president of Speer & Associates Inc., an Atlanta consulting firm.

The sole source of revenue — transaction fees paid by participating institutions each time their customers use the machines — must cover the expenses of running the network.

"You have to have extremely high volumes," Mr. Speer observed. While some experts say off-premises ATMs — those located away from bank-owned property — must generate

Other Banks Seen Following NatWest's Lead

Fed Permits Offer of Advice, Brokerage Service in 1 Affiliate

By NINA EASTON

WASHINGTON — The Federal Reserve Board's approval of an application by National Westminster Bank, London, to offer both investment advice and securities brokerage services to institutional customers here is widely expected to prompt other bank holding companies to follow suit.

"We'll also see bank holding companies apply to take this into the retail side," predicted Michael Helfer, a Washington attorney who represents the Dealer Bank Association, a trade group of bankers heavily involved in the securities business.

The Fed vote was 5-to-0, with Chairman Paul A. Volcker abstaining and Governor Henry C. Wallich absent and not voting. A Fed spokesman said on Monday that Mr. Volcker abstained because his son is employed by NatWest.

The Fed's decision, issued late Friday, moves banks one step further toward offering full brokerage services. Previously, bank holding companies could offer these services in separate subsidiaries. Now, for the first time, the Fed has allowed investment advice and brokerage services to be offered in the same subsidiary by a bank company.

In approving the NatWest application, the Fed rejected legal arguments, forwarded by the securities industry, that the combination of these services violates the Glass-Steagall Act, which separates commercial banking from the

Madison Financial Corporation

American Banker, Bond Buyer Announce Executive Changes

NEW YORK — A series of executive appointments and promotions has been announced by Richard H. Tierney, president, American Banker Inc. and The Bond Buyer Inc. The changes are effective immediately.

Edmund C. Burke was promoted to executive vice president of the publishing group. He was previously senior vice president, marketing and advertising. In his new post, Mr. Burke is responsible for advertising and editorial functions of the *American Banker* and *The Bond Buyer,* as well as printing, circulation, and fulfillment. He also has responsibility for the Trans Data Corp. subsidiary.

Before joining the companies in 1980, Mr. Burke worked as corporate marketing director for Conde Nast Publications. Prior to that, he spent 21 years at Time Inc. in various capacities.

Also promoted was Robert S. November, to executive vice president, information products. Mr. November now has responsibility for the financial services, Munifacts, and customer services divisions. Prior to joining American Banker Inc. and The Bond Buyer Inc. last year, Mr. November worked for the ITT Communications and Information Services Group as director of business development, and for the New York Times Co. as vice president and group officer for news, education, and information Services.

Mr. Tierney announced that Con A. Rusling, currently vice president and chief financial officer of the International Thomson Organisation Inc., will join the companies as executive vice president on July 1. He will have responsibility for finance, administration, strategic planning, mergers and acquisitions, and human resources.

Mr. Rusling previously was chief financial officer and treasurer of Thomson Monteith, an oil and gas partnership of which International Thomson Organisation Ltd. is the major partner. International Thomson Organisation Ltd., Toronto, owns International Thomson Organisation Inc., New York, which in turn owns the American Banker Inc. and The Bond Buyer Inc.

Three new senior vice presidencies also were announced. William E. Zimmerman, editor, *American Banker;* John H. Allan, editor, *The Bond Buyer* and *Credit Markets;* and Carl A. Vella, vice president, financial services, all were promoted from vice president to senior vice president.

Also promoted were Fred J. Ballerino, to vice president and director of publications distribution; Joseph Champey, to vice president and director of printing services; Neil Fitzgerald, to vice president and director of production services; and Debra G. Heffernan to vice president and director of customer services for the Municipal Information Services group.

Steven J. Isaacs was promoted to controller and Michelle B. Sorensen to treasurer, Mr. Tierney said. ■

High Court Lets Stand Ruling Rejecting Teller Machine-as-Branch Argument

By DAVID GOUREVITCH

States News Service

WASHINGTON — The Supreme Court on Monday let stand a lower court ruling that allows national banks to use automated teller machines owned by other companies without violating state branching restrictions.

The Second Circuit Court of Appeals ruling permits the banks to use the machines to offer services to depositors in cities where the banks are barred from opening branches.

The justices' refusal to hear the case leaves the lower court ruling untouched.

Justice Byron R. White voted to review the case, but four votes are required for an appeal to be heard.

The appeals court ruling could lead to a "drastically increased concentration of ownership in the banking industry and the demise of community-based independent banks through erosion of their deposit-base," contended the Independent Bankers Association of New York.

In 1983, the association sued in federal district court to block Marine Midland Bank, Buffalo, N.Y., from using an automated teller machine owned by Wegmans Food Markets in Canandaigua, N.Y. Other banks, savings and loan associations, and credits unions also used the machine.

Marine Midland paid the Rochester-based grocery chain a fee each time a customer used the machine to make a deposit or withdrawal, transfer money from one account to another, obtain cash advances from credit cards, or get account balance information. Marine Midland is owned by Marine Midland Banks Inc., 51% of which is owned by Hongkong & Shanghai Banking Corp., Hong Kong.

The Independent Bankers Association of New York argued that Marine Midland's use of the machine created a branch office in violation of a state law barring banks from opening branches in towns with fewer than 50,000 people in which another bank is based. Canandaigua has a population of 11,000 and is home of the Canandaigua National Bank.

The district court agreed with the association and ruled that the teller machine constituted an illegal branch under a McFadden Act definition of a branch as an office "at which deposits are received, or checks paid, or money lent."

The Second Circuit Court of Appeals reversed the decision, however, citing a 1976 Comptroller of the Currency definition of a branch as a place "owned and operated" by a bank. The appeals court ruled that Wegmans owned the teller machine and that the fee paid by Marine Midland did not constitute rent.

Without the owned-and-operated test, "the definition of branch would be broad enough to include almost any means of communicating instructions to a bank and in theory could bar such accepted conveniences as banking by mail and banking by telephone," the appeals court said, according to court

Correction

An item in the In the News column (page 3) on June 9 quoted sources as saying they believed Century National Bank & Trust Co., Rochester, Pa., was involved in merger negotiations with Equimark Corp., Pittsburgh. According to A. Dean Heasley, president and chief executive officer of Century, the bank has never talked to Equimark in connection with a merger. ■

INTERNATIONAL BRIEFING

Creditors Consider Alternatives As Mexican Restructuring Lags

LONDON — Lower lending margins, or negative lending margins from providing funds at below-market cost, or even interest payments denominated in pesos are among the possibilities being mentioned as elements of a creditors' package to ease the current financial crisis in Mexico, which has a foreign debt totaling $97.3 billion.

Stressing the uncertainty surrounding the situation, a source here said, "We still do not know exactly what the Mexican government will want. We believe it will be about $2.5 billion to $2.7 billion of new money from commercial banks, but they could also ask for a refinancing of the $950 million of 1983 money restructured last year — and perhaps a further rescheduling of funds already restructured before. They may also want to negotiate lower lending margins."

Over the past weekend, there was still no confirmation that substantive negotiations had been resumed with the International Monetary Fund on an economic program for Mexico that would allow negotiations to start with the nation's 550 commercial bank creditors.

It is estimated here that formal approval of a new credit agreement with the IMF may take at least a month and that negotiations with commercial banks might take another three months thereafter. On that timetable, new financing might not become available until about October, and it is believed here that Mexico might request bridging finance to maintain its interest service until fresh money is released.

There is concern that if negotiations drag out unduly, Mexico may run out of foreign exchange to continue meeting its interest service on its total foreign debt of more than $97 billion. The assumption in London, rightly or otherwise, is that any such bridging finance would have to come from the U.S. government, as after the first "crisis" in August 1982.

Bankers here seem hopeful that Mexico will be able to maintain interest payments at least for as long as an agreement with the IMF remains in prospect, as well as in the interim period after an IMF pact is reached and before a new agreement with the banks.

To ease the current crisis, sparked largely by lower oil prices, the Mexican government is expected to seek net new external financing of at least $6 billion for 1986 and, possibly, as much as $7.5 billion, according to an official source here.

This is well above the 1986 financing requirements of $4 billion that the Mexican authorities spoke of last September, before the collapse of world oil prices. Since then, the Mexican government has said its financing need for this year would be higher than last September's projection and also that it would seek to keep its debt service payments within its capacity to pay.

The net new 1986 financing requirement indicated by the Mexican government last September included a request for $2.5 billion from commercial banking creditors. The revised 1986 "shopping list," as understood here, is thought to include the following requirements:

- About $1 billion from the International Monetary Fund.
- About $1.2 billion from the World Bank and the Inter-American Development bank.
- Between $1 billion and $1.2 billion from Western official creditors in the Paris Club.
- About $600 million from the U.S. government's Commodity Credit Corp.
- About $2.5 billion to $2.7 billion from commercial banks plus, possibly, a further restructuring of debt previously restructured and a reduction of lending margins.
- A residual of trade and other credits from Japan.

As shown in the accompanying table, Mexico's total external debt outstanding at the end of 1985 was $97.3 billion, including more than $76 billion to the international banking system. The latter, in turn, included almost $58 billion owed to foreign banks by the Mexican government and its agencies.

Briefing . . .

Continued from Page 2

Under an unprecedented multiyear agreement signed last year, $48.6 billion of Mexican public sector debt to foreign banks was restructured, on terms allowing that principal to be amortized over the 12 years from 1986 to 1998, instead of the years 1985 to 1990, during which it was originally due to be repaid.

That restructuring package incorporated $20 billion of Mexican public sector debt not previously rescheduled plus about $23.5 billion of public sector debt that had already been rescheduled once before, plus the restructuring of $4.7 billion of new money provided by commercial banks in 1983.

Prior to that agreement, lending margins on Mexico's debt were set at either the London interbank rate plus 0.75% or the U.S. banks' prime rate plus 1.09% on debt not previously restructured; at prime plus 1.75% on the portion of debt that had been restructured before; and at prime plus 2.125% on the new money provided in 1983.

But last year those lending margins were renegotiated to give Mexico more favorable terms. A uniform lending margin was set for both those principal payments being restructured for the first time and those being restructured again. This uniform margin, applying about $43.5 billion of Mexico's public-sector debt, is 0.875% above the London rate or a comparable reference rate applying to the banks' cost of funds. Under present arrangements, that will rise to a margin of 1.125% from 1987 through 1991 and 1.25% from 1992 through 1998.

A reduction also was agreed to on the margin applying to the $4.7 billion of new money provided in 1983 from prime plus 2.125%. And the repayment of the principal of the 1983 money, originally scheduled from 1986-89, was stretched out to 1989-94.

An interesting aspect of the present Mexican financial situation is that Mexico may approach the Paris Club at the prompting of its commercial banking creditors. The Paris Club is the forum in which debt is renegotiated between the governments of debtor countries and Western creditor governments. Government debt renegotiated in this forum includes officially supported and insured export credits.

Total foreign debt	**$97.3**

Source: Mexican Ministry of Finance.
Data as of February 1986.

A number of bankers are keen that Mexico should renegotiate within the Paris Club because they would hope to benefit from the club's rule that all creditors be treated on a comparable basis.

The attached amortization schedule is a summary of the projections supplied to creditors earlier this year by the Mexican ministry of finance on the basis of the agreements presently in place. They show repayments of principal due to banks rising very sharply from 1989 on top of an earlier bunching of principal payments due to other creditors, including multinationals, Western governments, and international agencies like the World Bank and the IMF.

Those projections, however, are well below the World Bank's estimate published in March, which projected principal repayments falling due at an average of $10 billion a year through this year, rising to $13.4 billion in 1987, and then remaining at about $11.5 billion a year through 1989.

The amortization schedules would, of course, change to the extent that debt is restructured. Moreover, it must be emphasized that amortization schedules convey only one part of the picture. They cannot provide any indication of net flows, which will depend either on the restructuring of existing debt, or new spontaneous lending if a return to full debt service and credit standing is achieved, or even some combination of restructured and new voluntary lending.

Amortization schedules also exclude interest service. In its world debt tables 1985-86, published in March, the World Bank estimated interest service on Mexico's public and private sector external debt at $7.3 billion for 1985 and projected interest services of $6.3 billion for this year and $5.2 billion for 1987. The World Bank projected a fall in interest service thereafter, but that will not take place to the extent that principal repayments are stretched out beyond the maturities on which the World Bank was basing its projections.

On present projections, amortization will average about $7 billion through the remainder of the 1980s and interest payments an average of another $4.5 billion. That total of about $11.5 billion a year is equal to about 52% of Mexico's total export earnings in 1985, before the collapse of oil prices. It is not obvious how such a level of debt service can be kept up following the fall in the price of oil which, until last year, provided about two-thirds of Mexico's foreign exchange income.

Likewise unclear at this stage is the definition of Mexico's proposal that debt service be kept within its ability to pay. At least two precedents exist for an initiative of this kind by a debtor country. In August 1985, Peru set a limit of 10% of export earnings on interest service of its foreign debt. In January of this year Nigeria's government announced that it would try to keep total debt service in 1986, meaning both amortization and interest, to within 20% of export earnings.

In all the uncertainty surrounding the Mexican position at present, one factor stands out: If the Mexican government succeeds in limiting debt service to some proportion of its export earnings, then the maturities of its public-sector external debt would need to be stretched out on a similarly floating basis, which takes account of changes in the volume of prices of Mexico's exports.

— M.S. Mendelsohn

This is all the technical equipment your customers will need to keep in touch with your bank 24 hours a day 7 days a week.

Through the use of a Touch Tone® telephone your customers can access the all new telephone inquiry and data entry system for routine inquiries and transactions. Seven days a week. 365 days a year.

This new system is called INFOBOT.™

It can easily handle, by human voice, over 75% of your routine customer service calls automatically.

INFOBOT improves customer service, frees trained customer service representatives for the more involved calls and improves the operational efficiency of your financial institution.

All you do is plug it in.

INFOBOT simply plugs into your present computer and telephone systems, replacing the operator and the IBM® CRT. It connects directly to your IBM® controller.

But best of all, INFOBOT requires no mainframe modification. Improved customer service and operational efficiency are obtained while preserving the integrity of your computer operation.

The best person to handle account inquiries isn't necessarily a person.

INFOBOT courteously handles those millions of calls, consistently and accurately, freeing your trained customer service representatives to concentrate on those special inquiries and requests so important to maintaining good customer relations. And INFOBOT lets your own voice be heard, not the synthesized voice of a computer. An extensive vocabulary is easily recorded using the voice of your friendliest customer service representative.

INFOBOT will work for you 24 hours a day, 365 days a year, for 25 cents an hour.

INFOBOT is the first telephone inquiry and data entry system that will pay for itself in just six months. Over a five year period, INFOBOT works for just 25 cents an hour. That's just pennies for the improved flow of customer service calls.

Talk it over with INFOBOT.

Takeover Bill Wins Approval Of House Panel

But It Is Watered-Down Version Of What Regulators Requested

By BARTLETT NAYLOR

WASHINGTON — A House banking panel on Thursday approved a measure giving regulators greater authority in emergency interstate takeovers of financial institutions, but the bill would not give the regulators as much leeway as they sought.

Under the bill that moved through the House Banking subcommittee on financial institutions, regulators could invite out-of-state buyers to bid for a failing bank or thrift if it is among the 10 largest in the state, or has at least $500 million in assets.

Federal bank regulators had sought to reduce the current limit of $500 million to $250 million.

"This arrangement is minimally acceptable," said Michael Bradfield, general counsel of the Federal Reserve Board.

Community bankers, represented by the Independent Bankers Association of America, fought the regulators' original initiative, fearing invasion across state lines by New York and California banks eager to acquire smaller banks.

There are nearly 500 banks with $500 million in assets. By adding the 10 largest banks in each state, that only adds a few dozen more to the pool that could be saved through interstate sales.

Community banking interests have not prevailed on all fronts. Among a long list of amendments under consideration Thursday, one amendment giving in-state banks priority in bidding for failing institutions was defeated.

Also, out-of-state buyers would enjoy in-state parity. This means that once an out-of-state bank enters a new state through the acquisition of a failing institution, it can branch throughout the state as widely as can banks

Banks' Market-to-Book Ratios Rise as Interest Rates Decline

By L. MICHAEL CACACE

NEW YORK — Investors' perceptions of the nation's top banking companies, as measured by the market-to-book ratio of the value of bank stocks, improved substantially in 1985, according to an *American Banker* survey.

The improvement was aided no doubt by strong bank earnings in a climate of low interest rates, but perhaps the most important factor was reduced inflationary expectations.

Top Banks' Performance Ratings
Tables on Pages 22, 24

Based on the market-to-book ratio, the market voted J.P. Morgan & Co. the best money center company; Banc One Corp., Columbus, Ohio, the best large regional company; and State Street Boston Corp., the best smaller regional company.

Top Five Banks In Market-to-Book Ratio

	Name of Firm	Market-to-Book Ratio 1985
1	State Street Boston Corp.	236.0%
2	Banc One Corp.	215.4%
3	First Wachovia Corp.	189.6%
4	Barnett Banks of Fla	177.0%
5	Third National Corp.	176.5%

Top five come from all three peer groups: money centers, large regionals, and smaller regionals.

The annual survey, based on data supplied by Cates Consulting Analysts, New York, reviewed the performance of the nation's largest bank holding companies — the 83 commercial bank holding companies with assets of $5 billion or more on Dec. 31, 1985.

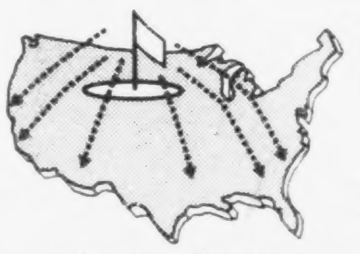
US Sued in Interstate Banking Dispute

By A. JOSEPH NEWMAN JR.



Interstate Banking

PHILADELPHIA — Pennsylvania Banking Secretary Ben McEnteer Thursday sued Comptroller of the Currency Robert L. Clarke for approving the relocation of a New Jersey national bank to downtown Philadelphia.

The suit, filed in U.S. District Court here, asked the court to set aside the approval and to enjoin the bank from doing business here.

Also named as defendants were Bank of New Jersey NA, which relocated its only office on May 27, and the $3.1 billion-asset Horizon Bancorp., Morristown, N.J., parent of the bank.

The bank received permission on May 16 to move from Moorestown, N.J., to Philadelphia under a section of National Banking Code that permits a national bank to relocate up to 30 miles, regardless of state boundaries.

Moorestown is 11 miles as the crow flies from the downtown location that Horizon chose. The bank has since been given a new name — Horizon Bank of Pennsylvania NA.

Regulator Sues Thrift's Former Officers
Page 2
California Regional Bill Advances
Page 17

In the suit, Mr. McEnteer said that Pennsylvania law forbids the ownership and control of a national bank located in Pennsylvania by an out-of-state holding company.

A Driving Force Behind Nashville's Growth

THIRD NATIONAL BANK

Affiliate of Third National Corporation
Nashville, Tennessee

Comment . . .

Continued from Page 20

in 1970, you can see where producers of building materials, home furnishings, etc., have seen their markets stagnate. Add to this the fact that the size of the average home has declined by 127 square feet, or 7½%, in the last four years alone, and you can see a further diminution in the need for building materials. Not only are single-family houses getting smaller, but multiunit housing, whose living spaces tend to be smaller than single-family units, have grown as a proportion of total starts. In 1975, multiple family dwellings accounted for less than one out of every four housing units constructed; last year they reached 40%.

. . . Has Depressed Manufacturing

The commercial end of the real estate market has its problems, too, which impact on manufacturing. The office building boom is apparently over, as demand for office space has fallen precipitously. This comes at a time when commercial builders have put up office buildings at a rapid pace, encouraged by generous tax benefits. Office vacancy rates in most major cities have climbed dramatically in the past few years in response to overbuilding in general, as well as to depressed conditions in the oil patch. Needless to say, this has taken its toll.

Spending on business structures accounts for 4¼% of the gross national product, up from 3.6% in 1978. Construction of factories and office buildings, warehouses, and shopping centers uses up a major chunk of the output of stone, clay and glass, and fabricated metals, not to mention a host of other materials, a lot of which is produced in the United States. Outlays for nonresidential structures flattened in the first quarter of 1986 compared with the fourth quarter of 1985. If they do no more than hold steady (and they seem more likely to decline), business spending on structures will rise only 2% this year, following a jump of over 15% in 1985.

Last on the list is agriculture. Depressed conditions down on the farm have caused considerable cutbacks in farmers' purchases of farm machinery, much of which is produced in the United States. Needless to say, they are also buying fewer consumer goods, especially those that are postponable, such as automobiles, furniture, and home appliances — again the bulk of which is made in the United States.

Some Bright Spots

As you can see, the nation's manufacturing sector has many problems. Some should diminish in the near future. For example, as foreigners use up their profit cushions and raise selling prices in the U.S., domestic manufacturers will have an opportunity to reclaim their share of market. Oil prices look like they've seen their lows, and if they go up further, some capital spending projects by the important petroleum sector may be restored. And once tax reform is either killed or becomes law, there could be some pickup in capital goods spending since the uncertainties surrounding the exact tax treatment of such outlays will no doubt have been clarified. As for agriculture, farm commodity prices have already bounced up in the wake of the Soviet nuclear disaster and, if they rise further, will boost farm incomes and, thus, farmers' buying power.

These are about the brightest spots one can find and they are none too bright. The dark clouds are still present. There doesn't seem to be any letup in the inroads made by foreign automakers in our domestic automobile market. At the same time, U.S. cars will continue to remain small and use less steel than their predecessors. The newly industrializing countries will continue to produce more and more of the goods that used to come mainly from

Comment: Page 29

Lower Interest Rates Drive Up Banks' Market-to-Book Value

Continued from Page 1

The survey broke down the 83 companies into three peer groups: 14 money center banks, 30 regional banks with assets of $10 billion or more, and 39 regional companies with total assets between $5 billion and $10 billion.

The market-to-book ratio of the value of a bank's stock essentially measures the ability of a bank to create or diminish wealth for its shareholders. Mathematically, the ratio is a function of the bank's return on equity capital adjusted for inflationary expectations. The return on equity capital, or ROE, is net income as a percentage of average equity capital.

When a bank's ROE exceeds market requirements — that is, when the return on investors' dollars is above the gain that could be realized from alternative investments — the market price of a stock generally rises above its book value. In that instance, the market-to-book ratio exceeds 100%, creating shareholder wealth. A ratio of 200%, for example, means that a bank has a formula for taking one dollar from its shareholders and turning it into two dollars.

Conversely, when a bank's ROE falls below the level required by the marketplace, the market value of a bank's stock generally will be less than its book value; and the ratio falls below 100%, diminishing shareholder wealth. A ratio of 50%, for example, means that a firm is taking $1 from its shareholders and converting it into a half dollar.

Just a few years ago, the marketplace required a bank to earn a return on equity capital of about 17% to push up the market-to-book ratio to 100%. But the decline in interest rates has reduced inflationary expectations and has lowered the required return on equity capital to about 14%. The calculations are based on a formula using the long-term Aa-rated corporate bond rate as a measure of inflationary expectations.

Cates defines market-to-book value as the stock price divided by the book value per share. To calculate the 1985 ratio, Cates uses the bid price on common stock as of Feb. 3, 1986, and divides this by book value per share on Dec. 31, 1985. To calculate the 1984 ratio, Cates uses the stock's price on Feb. 1, 1985, and divides it by book value per share on Dec. 31, 1984. From Feb. 1, 1985, to Feb. 3, 1986, the long-term Aa-rated corporate bond rate fell 194 basis points, from 12.29% to 10.35%.

Other things being equal, a decline in interest rates is sufficient to cause the market-to-book ratio to rise, because a decline in rates lowers the required ROE. That same decline in rates also helped boost actual ROE. In other words, the effect of falling interest rates was to raise the numerator — actual ROE — and lower the denominator — required ROE — of the key ratio influencing the relationship of market-

A XEROX Financial Services Company

When Rumors Are Sweeping the Marketplace, You'll Know the Facts With:

BANKALERT℠

The first bank video service that delivers up-to-the-minute credit analysis and market sensitive information. BANKALERT provides the data you want when you need it. If you trade . . . invest in . . . borrow from . . . lend to . . . or correspond with banks, BANKALERT serves as an early warning on which to base your banking decisions.

BANKALERT delivers the most comprehensive and reliable electronic analysis available. Its banking analysts monitor the activities of almost 500 U.S. and foreign banks. With a keystroke, you are updated with up-to-the-minute information. Accordingly, you function faster. . . more efficiently. . . and with increased profitability.

BANKALERT is unique. No other service offers the extensive real-time coverage of banking credit markets. Discover how you can benefit from BANKALERT. For a FREE TRIAL or more information, complete the coupon. Mail it today.

The return on assets is based on net income, after taxes but before extraordinary items. Dashes (--) in the 1984 rank columns for banking companies in the $10 billion asset category indicate that the firm was in the $5-to-$10 billion asset category in 1984. Dashes (--) in the 1984 rank columns for banking companies in the $5-to-$10 billion asset category indicate that these companies were not in this panel last year, their 1984 assets were less than $5 billion. (†)— Includes gain on sale of mortgage subsidiaries. Without this gain, R.O.A. would have been 1.19% and R.O.E. 16.45%. N.A.- Not Applicable.

Data provided by Cates Consulting Analysts, New York.

Morgan, Banc One, State Street Tops in Market-to-Book Ratios

➸ Continued from Page 21

to-book values.

The Cates data show that the average ROE for the money center banks rose 154 basis points to 13.13%.

At the large regional banks, average ROE rose 56 basis points to 13.46%. However, if six of the firms with earnings problems are excluded — BankAmerica Corp., Crocker National Corp., and four Texas-based companies: MCorp; Texas Commerce Bancshares Inc.; InterFirst Corp., and First City Bancorporation of Texas Inc. — this group's ROE rose 237 basis points to 16.19%. At the smaller regionals, average ROE rose 206 basis points to 13.83%.

J.P. Morgan & Co. led the money center bank group with a market-to-book ratio of 138.71% in 1985, up from 103.72% in 1984. Manufacturers Hanover Corp. had the lowest market-to-book ratio among the money center banks, 63.50%, up from 58.72% in 1984. Among the 14 money center banks, five had ratios greater than 100% last year, compared with three in 1984.

Over the past four years, J.P. Morgan & Co. has been the nation's second largest banking firm in earnings. Only Citicorp earned more than Morgan. However, Morgan's earnings growth has been much more impressive than Citicorp's over the period. From 1982 to 1985, Morgan's net income has more than doubled, while Citicorp's rose a respectable 38%.

Morgan, the nation's premier wholesale banking firm, has perennially ranked among the top money center banks in both return on assets and return on equity. And for the first time last year, it ranked first in both categories among the money center banks, with a return on assets of 1.06% and a return on equity of 18.06%.

Among the large regional banks with assets of $10 billion or more, Banc One Corp., Columbus, Ohio, was tops with a ratio of 215.42%, up from 168.33% a year earlier. And the newly formed First Wachovia Corp.of Winston-Salem, N.C., and Atlanta, was second with a ratio of 189.63%.

At the bottom of the rankings were BankAmerica Corp., San Francisco, and First City Bancorporation of Texas Inc., Houston, with ratios of 50.60% and 46.77%, respectively.

Twenty of the 29 regionals for which market-to-book data were available had ratios that exceeded 100%. In 1984, 13 of the 27 banks in this peer group had ratios exceeding 100%.

Banc One Corp. has been one of the nation's most profitable banks in the nation over the past four years. Over that period, earnings more than doubled from $62 million in 1982, when it ranked 34th nationwide, to $130 million last year, when it ranked 23d. Its return on assets of 1.37% last year was the best in the large regional group, after adjusting CoreStates Financial Corp.'s return on assets for subsidiary sales. And Banc One's return on equity of 17.95% ranked it seventh among the large regionals. Banc One is considered a merger specialist with a remarkable ability to assimilate acquired institutions.

Among the smaller regionals with assets in the $5 billion-to-$10 billion range, State Street Boston Corp. was No. 1 with a ratio of 236.02%, up from 151.96% in 1984. Third National Corp., Nashville, was second with a ratio of 176.61%.

At the bottom of the rankings were First Security Corp., Salt Lake City, and Texas American Bankshares Inc., Fort Worth, with ratios of 79.11% and 68.97%, respectively. Last year, 31 of the 35 banks in this peer group had ra-

Bank Performance Measures Explained

NEW YORK — The statistical tables for the *American Banker's* annual performance study were compiled by the newspaper from data provided by Cates Consulting Analysts, New York.

In the first table, "1985 Performance of Top U.S. Banking Companies," the banking concerns are ranked by three measures of performance: return on average assets, return on average equity, and percentage change in earnings per share.

Cates defines return on average assets as net income before extraordinary items for the entire year 1985 divided by a daily average of total assets. If daily average assets is not available, Cates uses the mean of assets at Dec. 31, 1984, and Dec. 31, 1985.

Return on average equity is net income minus preferred stock dividends divided by average common shareholders' equity. Here, average equity is computed by taking the mean of common equity at Dec. 31, 1984 and Dec. 31, 1985.

The percentage change in earnings per share is the difference between earnings per share in 1985 and 1984 divided by earnings per share in 1984. Earnings per share is primary, based on net income before extraordinary items, and for the 12-month period.

In the second table entitled "How the Market Looks at Banks," the banks are ranked in order of market-to-book value of their stock. In addition, the price earnings multiple and dividend yield are shown.

Market-to-book value is the stock price divided by the book value per share. Cates uses the bid price on common stock as of Feb. 3, 1986, (or the closest trade date) and divides this by book value per share on Dec. 31, 1985.

The price earnings multiple is the stock price as defined above divided by earnings per share.

The dividend yield is the indicated annual dividend divided by the stock price as defined above.

The third table is entitled "Performance Study Peer Groups." This table identifies all banking firms with assets of $5 billion or more, on Dec. 31, 1985. The banks are listed in asset-size order within their respective peer grouping. This table was prepared by the *American Banker* statistics department. Banks that are not owned by holding companies are excluded.

Corporate Investors:

Announcing another first in corporate asset management

Pilgrim Corporate Cash Fund

Designed to maximize short term corporate cash management with income 93% tax-free!

Now corporations have an opportunity to invest easily in auction rate preferred stocks which provide 93% tax-free income from qualifying dividends eligible for the 85% dividends-received deduction. The Pilgrim Corporate Cash Fund provides professional investment management, *plus* essential diversification, *plus* daily liquidity. It's another important investment opportunity in corporate asset management.

The new Pilgrim Corporate Cash Fund requires as little as $25,000 to invest and is ideal for short term cash management needs. It's particularly recommended when preservation of capital is the primary objective. Highlights of the Fund are:

- Income 93% Tax-Free to Corporations
- High After-Tax Yield
- Preservation of Capital
- No Load
- Daily Liquidity at Current Net Asset Value
- Diversification
- Daily Dividend Income

Pilgrim Corporate Cash Fund completes the spectrum of total corporate asset management

based there.

Independent Bankers Association lobbyist Steve Verdier said the change was buffered by protection of state laws regarding the privileges of out-of-state bank operators.

Defeated on Thursday were two amendments to place caps on banking assets and deposit concentration.

Rep. Mary Rose Oakar, D-Ohio, promised to introduce an amendment enhancing the Community Reinvestment Act when the bill is considered by the full House Banking Committee.

Next Tuesday, the same financial institutions subcommittee will vote on a bill to recapitalize the Federal Savings and Loan Insurance Corp. fund.

On a related issue, Rep. Bill McCollum, R-Fla., intensified efforts to push a ban on limited-service, or nonbank, banks. These institutions escape the ban on interstate banking and can be owned by nonbanking parents. Mr. McCollum fears they will be exploited by outside institutions to gather deposits in his state.

Mr. McCollum has drafted a petition that would force the House Rules Committee, which controls what measures are considered on the House floor, to release legislation banning most nonbank banks. The House Banking Committee approved the ban in bill HR 20 more than a year ago, but the House Rules Committee has refused to pass it on. Mr. McCollum must win the signatures of a majority of House members.

Rep. Fernand J. St Germain, D-R.I., chairman of the House Banking Committee, said his name was on Mr. McCollum's petition, but he asked that it be removed. He would not comment other than to say, "There had been a misunderstanding."

In an interview Wednesday, House Rules Committee Chairman Claude Pepper, D-Fla., said he favored the ban on nonbank banks. "But we're trying to work out a compromise so there won't be so much of a fight."

According to lobbyists, Mr. St Germain will ask the Rules Committee to pass on a limited version of the ban when it considers the interstate acquisitions measure now moving through the House Banking Committee.

House Speaker Thomas "Tip" O'Neill, D-Mass., said in an interview Wednesday that he would not interfere on the issue of debating the nonbank-bank ban. "Chairman St Germain came to me and said he did not need my help. I let the House work its course. I don't interfere."

Any emergency interstate acquisition legislation passed by the House also faces consideration in the Senate, where it is expected to be part of an omnibus banking bill to be introduced shortly. ■

rizon Bancorp.'s senior vice president and general counsel, said the bank "has the legal right to relocate and to continue to operate."

He said that the Pennsylvania law was "unconstitutional because it unreasonably discriminates" between out-of-state and in-state businesses in interstate commerce.

Mr. Little said that Horizon has applied to move the bank from its present location on Rittenhouse Square to another location in downtown Philadelphia.

Horizon has agreed to be acquired by Chemical New York Corp. when a national trigger in the New Jersey interstate banking law becomes effective in 1988, at the earliest.

Mr. Little said that Horizon also disagreed with a 1985 Federal Reserve Board decision involving Mark Twain Bancshares Inc., St. Louis. In that decision, the Fed argued that under the Bank Holding Company Act it must approve interstate relocations. He said that "it is very clear" that relocating the headquarters of a national bank is not covered by the act. In the Mark Twain case, the Fed said that a holding company that controlled a bank outside its home state while controlling a bank within its home state violates the Douglas Amendment's ban on interstate banking.

Mark Twain subsequently closed a bank in Overland, Kan., which had been relocated from Independence, Mo., about 15 miles away.

Separately, Wayne Angell, a member of the Fed, commented generally on the Horizon and Mark Twain cases, saying that he "would not favor subterfuges that would take away the authority of state legislators."

He said that multistate bank holding companies were subject to the Bank Holding Company Act.

Mr. Angell spoke at a press conference at the Federal Reserve Bank of Philadelphia. ■

tios exceeding 100%, compared with 20 of the 35 banks in 1984.

State Street, which surpassed the $5 billion-asset mark last year, joins the performance survey for the first time. The bank was restructured several years ago and invested heavily in the securities processing business. Today, it is one of the largest transfer agents and record keepers for mutual funds. This processing business generates an above-average amount of fee income for a bank of State Street's size.

The size of earnings improved substantially in 1985, compared with 1984, adding to the marketplace's improved perception of banking companies.

Net interest margins rose to offset the effects of stagnant commercial loan growth.

In addition, earnings were helped by the strength in noninterest income — especially bond trading and foreign exchange trading — in the second and third quarters of 1985. Also last year, there was a lessening in concern about the debt of lesser-developed nations, especially Argentina. The 1984 earnings were hurt by Argentine loan worries.

Net income at the top 10 banks jumped up 19.7% in 1985, while the top 100 companies in net income posted a 17.9% gain, their largest gain since 1979.

Improved earnings helped boost the return on assets, or ROA, which is net income as a percentage of average assets, for all three peer groups. In 1985, the ROA of money center banks rose 10 basis points to 0.68%.

Among the large regional banks, the average ROA rose only four basis points to 0.79%. However, if the six banks listed above are again excluded, ROA improved by eight basis points from 0.86% in 1984 to 0.94% in 1985.

Among the smaller regional banks, ROA was up 10 basis points to 0.86%. ■

Comment

The Balanced Bank

By SANFORD ROSE

Bankers, afflicted with a pardonable weakness for taxonomy, are becoming exceedingly fond of the concept of the "balanced bank." This concept, popularized by the First Manhattan Consulting Group, the "hottest" pundit in the business, anatomizes bank earnings into five parts: asset yield, liability yield, contingent-liability return, mismatch return, and return from nonbalance-sheet-intensive businesses.

Smart banks make use of all or nearly all these tributaries to the earnings stream. In effect, they make a given dollar of equity work a lot harder than do those banks that focus primarily on asset-intensive activities.

Asset-intensive businesses in turn are broken down into wholesale and consumer lending. Generic wholesale lending to big borrowers fetches poor returns because it has become mature and commodified, although some lenders have managed to transcend these limitations with such value enhancements as investment banking advice — e.g.,

First Interstate Said to Be Interested In Buying Troubled First Oklahoma

By RICHARD RINGER

CHICAGO — A large West Coast bank holding company has indicated an interest in acquiring First Oklahoma Bancorporation Inc., Oklahoma City, as the chances of finding an in-state buyer for First Oklahoma have waned.

Interstate Banking

First Interstate Bancorp, Los Angeles, may be willing to acquire First Oklahoma, several sources said. At the same time, Banks of Mid-America Inc., the only Oklahoma-based bank holding company thought to have a chance of buying First Oklahoma, has apparently lost interest in any merger with its crosstown rival.

With the waning interest of Banks of Mid-America, it becomes increasingly likely that a solution for pumping much-needed capital into First Oklahoma's principal banking subsidiary involves a purchase by an out-of-state bank or bank holding company.

An Oklahoma law took effect earlier this year that allows out-of-state banks and bank holding companies to acquire failed or failing banks in the state.

In published reports last week and again Monday, Joseph J. Pinola, First Interstate's chairman and chief executive officer, said that the company is studying several potential purchases, including some of failing banks or thrifts for which regulators are believed to be trying to arrange merger partners.

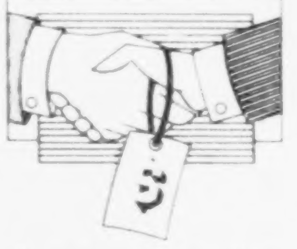
Top 10 Banks' Business Loans Decline Again

Smaller Banks in Top 300 Continue to Show Gains

By L. MICHAEL CACACE

NEW YORK — For the second consecutive year, the growth in business lending at the nation's top 300 banks in the field was sharply skewed in 1985. The top 10 banks continued to show a decline in commercial and industrial loans, while the smaller banks in the top 300 posted sizable gains.



Commercial Lending

There are several reasons for the disparity in growth rates. First, many large banks have been selling participations in business loans to foreign banks' U.S. branches, agencies, and commercial bank subsidiaries; to other domestically owned banks ranked among the top 300; and to thrift institutions. These sales have reduced the amount of loans remaining on their books.

Second, the large corporate clients of the nation's top banks have access to the national money markets, and many have turned to the commercial paper market for financing. Third, the corporate clients of the lower-tier banks in the top 300 are from the middle-market sector of the U.S. economy, which has had strong demand for loans in the past two years.

Top 300 Bank Lenders to Business
Tables Begin on Page 25

Commercial and industrial loans, or business loans, declined 6.1% at the top 10 banks in 1985, after falling 1.2% in 1984. Business loans at banks ranked under the top 50 rose 20.5%, after rising 23.8% in 1984.

These are some of the findings of the *American Banker*'s sixth annual survey of the top 300 commercial bank lenders to business, published today.

The survey is based on the federal regulatory reports of condition for Dec. 31, 1985, and Dec. 31, 1984, and the reports of income for 1985 and 1984. The report-of-condition data include outstanding business loans to U.S. and foreign businesses and are consolidated to include loans booked in a bank's domestic and foreign offices. Lease financing receivables are excluded. For more detailed definitions, see the side notes that accompany the listing of the top 300 banks.

There are several reasons for the sale of business loans by the nation's top banks. Within the last two years, federal regulators have imposed new capital adequacy requirements on commercial banks. In July 1984 the Federal Reserve Board proposed that both regional and multinational state member banks and all bank holding companies raise their minimum primary-capital-to-assets and their total-capital-to-assets ratios 0.5% each, to 5.5% and 6%, respectively. And in February 1985, the Federal Deposit Insurance Corp. approved a final rule requiring all banks to increase the minimum prima-

Sidenotes

Data Source: All data were provided to American Banker by **ADP Data Services Division, New York,** from their computerized data base of the Federal regulatory Report of Condition and the Report of Income for all insured commercial banks.

ADP's data for Dec. 31, 1985, are from the preliminary Federal Reserve computer tape which did not contain data for Puerto Rican-based banks. Therefore, Puerto Rican banks have not been included in this year's survey. Also, ADP restates its 1984 data on a pro forma basis for mergers in 1985. For that reason, some banks may not have ranks for 1984, although their 1984 business loans appear sufficiently large to have a rank. Also, all 1984 ranks are based on the actual business loans outstanding on Dec. 31, 1984, and have not been adjusted to reflect 1985 mergers. For this reason, the 1984 ranks for some banks may appear to be lower than the listed business loan figure for 1984 would appear to indicate.

Business Loans: Data are from Schedule RC-C of the Federal regulatory Report of Condition (RC) and are consolidated to include both domestic and foreign offices. Loans to both domestic and foreign businesses are included. The appropriate line reference numbers on the RC are: Column A item 4.a. (commercial and industrial loans to U.S. addressees) and item 4.b. (commercial and industrial loans to non-U.S. addressees).

As defined by the Federal Reserve Board, commercial and industrial loans, or business loans, are "Loans for commercial and industrial purposes to sole proprietorships, partnerships, corporations, and other business enterprises, whether secured (other than by real estate) or unsecured, single payment or installment. These loans may take the form of direct or purchased loans." The bank's "own acceptances discounted and held in its portfolio when the account party is commercial and industrial enterprise" are included also, as are "Loans to individuals for commercial, industrial and professional purposes." Excluded are loans to individuals for investment or personal expenditure purposes and "all commercial and industrial loans held in trading accounts." Also excluded are the bank's lease financing receivables which are reported on line 10 of Schedule RC-C.

The Federal Reserve Board uses the term "domicile" to determine the foreign (non-U.S. addressee) or domestic (U.S. addressee) status of a customer reporting to the bank. "Domicile is determined by the principal business address of a corporation, partnership, or sole proprietorship." U.S. addressees include the 50 states of the U.S., the District of Columbia, Puerto Rico, and the U.S. territories and possessions.

Sidenotes

Total Loans: Data are from RC-Balance Sheet, line 4.a. ("Loans and leases, net of unearned income").

Total Assets: Data are from RC-Balance Sheet, line 12.

Domestic Business Lending: Seven items appear under this heading.

(1) Total 12/31/85: This is total business loans to both domestic and foreign customers that were booked in the domestic offices of the bank. These data were taken from RC-Schedule C, Column B (Domestic offices), items 4.a. plus 4.b.

(2) % of Total Business Loans: This is the ratio of domestically-booked business loans to total business loans. For banks without foreign offices this ratio will be 100%.

(3) Interest income 1985: Data are from the Report of Income (RI). It is gross interest and fee income on commercial and industrial loans booked in domestic offices. It is taken from Schedule RI, item 1.a.(1).(d).

(4) Gross Int. Inc. 1985: This is total gross interest income for the bank. It is taken from Schedule RI, item 1.g.

(5) Dom. Inc. as % of Int. Inc.: This is the ratio of gross domestic business loan interest income (item 3 in this block) to total gross interest income (item 4 in this block).

(6) Gross return 1985: This is the gross return on domestic business lending. It is calculated by dividing gross interest and fee income on commercial and industrial loans booked in domestic offices in 1985 (item 3 in this block) by average business loans booked in the domestic offices during the fourth quarter of 1985. The average business loan figure is not shown in the table. It was taken from Schedule RC-K-Quarterly Averages, line item 6.a.(4).

According to Federal Reserve Board instructions for the Report of Income, interest and fee income on loans are "all interest, fees, and similar charges levied against or associated with all assets reportable as loans in Schedule RC-C, items 1 through 9."

(7) Gross return 1984: This is the gross return on domestic business lending for 1984, calculated in the same manner as the gross return for 1985 above.

(a)— Changed title to Sovran Bank-/Maryland 4/86. **(b)**— Changed title to Bank IV Wichita NA 3/31/86. **(x)**— Rank bank would have had, if it were included in the survey.

Top 300 Commercial Banks in Loans to Business

Dec. 31, 1985, Compared with Dec. 31, 1984

Sidenotes

Data Source: All data were provided to American Banker by **ADP Data Services Division, New York,** from their computerized data base of the Federal regulatory Report of Condition and the Report of Income for all insured commercial banks.

ADP's data for Dec. 31, 1985, are from the preliminary Federal Reserve computer tape which did not contain data for Puerto Rican-based banks. Therefore, Puerto Rican banks have not been included in this year's survey. Also, ADP restates its 1984 data on a pro forma basis for mergers in 1985. For that reason, some banks may not have ranks for 1984, although their 1984 business loans appear sufficiently large to have a rank. Also, all 1984 ranks are based on the actual business loans outstanding on Dec. 31, 1984, and have not been adjusted to reflect 1985 mergers. For this reason, the 1984 ranks for some banks may appear to be lower than the listed business loan figure for 1984 would appear to indicate.

Business Loans: Data are from Schedule RC-C of the Federal regulatory Report of Condition (RC) and are consolidated to include both domestic and foreign offices. Loans to both domestic and foreign businesses are included. The appropriate line reference numbers on the RC are: Column A item 4.a. (commercial and industrial loans to U.S. addressees) and item 4.b. (commercial and industrial loans to non-U.S. addressees).

As defined by the Federal Reserve Board, commercial and industrial loans, or business loans, are "Loans for commercial and industrial purposes to sole proprietorships, partnerships, corporations, and other business enterprises, whether secured (other than by real estate) or unsecured, single payment or installment. These loans may take the form of direct or purchased loans." The bank's "own acceptances discounted and held in its portfolio when the account party is commercial and industrial enterprise" are included also, as are "Loans to individuals for commercial, industrial and professional purposes." Excluded are loans to individuals for investment or personal expenditure purposes and "all commercial and industrial loans held in trading accounts." Also excluded are the bank's lease financing receivables which are reported on line 10 of Schedule RC-C.

The Federal Reserve Board uses the term "domicile" to determine the foreign (non-U.S. addressee) or domestic (U.S. addressee) status of a customer reporting to the bank. "Domicile is determined by the principal business address of a corporation, partnership, or sole proprietorship." U.S. addressees include the 50 states of the U.S., the District of Columbia, Puerto Rico, and the U.S. territories and possessions.

Sidenotes

Total Loans: Data are from RC-Balance Sheet, line 4.a. ("Loans and leases, net of unearned income").

Total Assets: Data are from RC-Balance Sheet, line 12.

Domestic Business Lending: Seven items appear under this heading.

(1) Total 12/31/85: This is total business loans to both domestic and foreign customers that were booked in the domestic offices of the bank. These data were taken from RC-Schedule C, Column B (Domestic offices), items 4.a. plus 4.b.

(2) % of Total Business Loans: This is the ratio of domestically-booked business loans to total business loans. For banks without foreign offices this ratio will be 100%.

(3) Interest income 1985: Data are from the Report of Income (RI). It is gross interest and fee income on commercial and industrial loans booked in domestic offices. It is taken from Schedule RI, item 1.a.(1).(d).

(4) Gross Int. Inc. 1985: This is total gross interest income for the bank. It is taken from Schedule RI, item 1.g.

(5) Dom. Inc. as % of Int. Inc.: This is the ratio of gross domestic business loan interest income (item 3 in this block) to total gross interest income (item 4 in this block).

(6) Gross return 1985: This is the gross return on domestic business lending. It is calculated by dividing gross interest and fee income on commercial and industrial loans booked in domestic offices in 1985 (item 3 in this block) by average business loans booked in the domestic offices during the fourth quarter of 1985. The average business loan figure is not shown in the table. It was taken from Schedule RC-K-Quarterly Averages, line item 6.a.(4).

According to Federal Reserve Board instructions for the Report of Income, interest and fee income on loans are "all interest, fees, and similar charges levied against or associated with all assets reportable as loans in Schedule RC-C, items 1 through 9."

(7) Gross return 1984: This is the gross return on domestic business lending for 1984, calculated in the same manner as the gross return for 1985 above.

(a)— Changed title to Sovran Bank/Maryland 4/86. **(b)**— Changed title to Bank IV Wichita NA 3/31/86. **(x)**— Rank bank would have had, if it were included in the survey.

Sidenotes

Data Source: All data were provided to American Banker by **ADP Data Services Division, New York,** from their computerized data base of the Federal regulatory Report of Condition and the Report of Income for all insured commercial banks.

ADP's data for Dec. 31, 1985, are from the preliminary Federal Reserve computer tape which did not contain data for Puerto Rican-based banks. Therefore, Puerto Rican banks have not been included in this year's survey. Also, ADP restates its 1984 data on a pro forma basis for mergers in 1985. For that reason, some banks may not have ranks for 1984, although their 1984 business loans appear sufficiently large to have a rank. Also, all 1984 ranks are based on the actual business loans outstanding on Dec. 31, 1984, and have not been adjusted to reflect 1985 mergers. For this reason, the 1984 ranks for some banks may appear to be lower than the listed business loan figure for 1984 would appear to indicate.

Business Loans: Data are from Schedule RC-C of the Federal regulatory Report of Condition (RC) and are consolidated to include both domestic and foreign offices. Loans to both domestic and foreign businesses are included. The appropriate line reference numbers on the RC are: Column A item 4.a. (commercial and industrial loans to U.S. addressees) and item 4.b. (commercial and industrial loans to non-U.S. addressees).

As defined by the Federal Reserve Board, commercial and industrial loans, or business loans, are "Loans for commercial and industrial purposes to sole proprietorships, partnerships, corporations, and other business enterprises, whether secured (other than by real estate) or unsecured, single payment or installment. These loans may take the form of direct or purchased loans." The bank's "own acceptances discounted and held in its portfolio when the account party is commercial and industrial enterprise" are included also, as are "Loans to individuals for commercial, industrial and professional purposes." Excluded are loans to individuals for investment or personal expenditure purposes and "all commercial and industrial loans held in trading accounts." Also excluded are the bank's lease financing receivables which are reported on line 10 of Schedule RC-C.

The Federal Reserve Board uses the term "domicile" to determine the foreign (non-U.S. addressee) or domestic (U.S. addressee) status of a customer reporting to the bank. "Domicile is determined by the principal business address of a corporation, partnership, or sole proprietorship." U.S. addressees include the 50 states of the U.S., the District of Columbia, Puerto Rico, and the U.S. territories and possessions.

Sidenotes

Total Loans: Data are from RC-Balance Sheet, line 4.a. ("Loans and leases, net of unearned income").

Total Assets: Data are from RC-Balance Sheet, line 12.

Domestic Business Lending: Seven items appear under this heading.

(1) Total 12/31/85: This is total business loans to both domestic and foreign customers that were booked in the domestic offices of the bank. These data were taken from RC-Schedule C, Column B (Domestic offices), items 4.a. plus 4.b.

(2) % of Total Business Loans: This is the ratio of domestically-booked business loans to total business loans. For banks without foreign offices this ratio will be 100%.

(3) Interest income 1985: Data are from the Report of Income (RI). It is gross interest and fee income on commercial and industrial loans booked in domestic offices. It is taken from Schedule RI, item 1.a.(1).(d).

(4) Gross Int. Inc. 1985: This is total gross interest income for the bank. It is taken from Schedule RI, item 1.g.

(5) Dom. Inc. as % of Int. Inc.: This is the ratio of gross domestic business loan interest income (item 3 in this block) to total gross interest income (item 4 in this block).

(6) Gross return 1985: This is the gross return on domestic business lending. It is calculated by dividing gross interest and fee income on commercial and industrial loans booked in domestic offices in 1985 (item 3 in this block) by average business loans booked in the domestic offices during the fourth quarter of 1985. The average business loan figure is not shown in the table. It was taken from Schedule RC-K-Quarterly Averages, line item 6.a.(4).

According to Federal Reserve Board instructions for the Report of Income, interest and fee income on loans are "all interest, fees, and similar charges levied against or associated with all assets reportable as loans in Schedule RC-C, items 1 through 9."

(7) Gross return 1984: This is the gross return on domestic business lending for 1984, calculated in the same manner as the gross return for 1985 above.

Top 10 Decline in Business Loans as Smaller Banks Gain

➽ Continued from Page 1

ry-capital and total-capital ratios to the 5.5% and 6% levels, respectively. As a result of these changes, capital has become a constraint on asset expansion.

Also, these loan participation sales produce revenues for the bank without increasing loan risk. This is especially important to the large banks who have experienced problems with their foreign loan and energy-related loan portfolios.

Why Foreign Banks in US Are Buying

Foreign banks in the United States are buying for a number of reasons. First, they have been more willing to accept the thinner spreads available through loan participation sales than domestically owned banks, because the alternative lending opportunities for most foreign banks here are limited. Most domestically owned banks have established customer relationships that foreign banks find difficult to break.

Secondly, the size of the loan is a constraint for many foreign banks in the U.S. market. They could not provide a borrower with the entire amount of funds needed. Thus a loan participation is better than no loan at all. And third, foreign banks' U.S. branches and agencies are not subject to the capital adequacy constraints imposed on domestically chartered U.S. banks.

According to data from the Federal Reserve Board, business loans at the large U.S. branches and agencies of foreign banks grew by more than 50%, to $30.5 billion at yearend 1985, from $20.3 billion a year earlier. The large U.S. branches and agencies of foreign banks accounted for more than half of the growth in business loans booked by all banks in the United States last year.

Also, some thrift institutions that have been eager to enter the commercial lending field have purchased some of these loan participations. According to data from the Federal Home Loan Bank Board, commercial loans at FSLIC-insured institutions rose 37.4% last year, to $15 billion.

The *American Banker*, in its annual survey of foreign banks in the U.S. published on Feb. 14, reported that the loan sales by the nation's top banks "may indicate that fundamental changes are taking place in the U.S. commercial lending market. The securitization of the U.S. commercial lending market has begun. This securitization will affect the fundamental relationship between the bank and the borrower. The bank has become a placement agent for the borrower, instead of the lender. These sales indicate that the investment banking function of the large, domestically owned banking firms will grow in both importance and size."

Growth in Business Lending at US Banks

(In Billions of Dollars)

	12/31/85	12/31/84	% Change
All U.S. Banks	$495.9	$475.7	+ 4.2%
Top 300 Banks	444.4	430.9	+ 3.1%
Top 10 Banks	190.8	203.2	- 6.1%
Banks Ranked 11-30	84.8	84.5	+ 0.5%
Banks Ranked 31-50	36.0	33.0	+ 9.0%
Banks Ranked 51-300	132.8	110.2	+20.5%
All Other Banks	51.5	44.8	+15.0%
Branches and Agencies of Foreign Banks	30.5	20.3	+50.2%

Securitization is the sale of financial assets by an institution. The security purchaser invests in the pool and not the issuer. Securitization provides a bank with liquidity and allows it to shift market risk to investors.

Also, the *American Banker*, in its first annual survey of commercial lending at thrift institutions, attributed a portion of the surge in commercial lending at thrifts to loan participation purchases by some of the faster growing thrifts in the field.

Other Survey Findings

- Citibank remains the top bank in business loans, with $36 billion on Dec. 31, 1985, down 2.7% from $37 billion a year earlier, and down almost 9% from $39.4 billion two years earlier.
- Manufacturers Hanover Trust Co. remains the top bank in domestically booked business loans, with $12.4 billion, down 10.6% from $13.7 billion a year earlier. Overall, Manufacturers ranks fourth, with a $21.4 billion business loan portfolio.
- Domestically, Bank of America barely retained its second place ranking, with $10.8 billion, down 13% from $12.4 billion a year earlier. Citibank was a close third with $10.7 billion in domestic business loans.
- Among the top 100 banks, 92d-ranked Industrial Bank of Japan Trust Co., New York, had the largest percentage gain in business loans — up 51.8%, to $776 million. The bank is a subsidiary of Industrial Bank of Japan Ltd., Tokyo, Japan's seventh largest bank.
- European American Bank, New York, had the largest decline in business loans outstanding among the top 100 banks, with a 29.4% drop. European American, which is owned by a consortium of six European banks, ranked 30th in business loans, with $2.2 billion on Dec. 31.
- New York ranked as the state with the most banks in the top 300, with 30. Following New York were Texas, with 24 banks; Pennsylvania, with 23 banks; and California, with 20 banks.
- Nine banks from Delaware ranked among the top 300. Of the nine, seven are subsidiaries of New York banks that were established under the Financial Center Development Act of 1981.
- The average gross return on domestic business lending for the top 300 banks was 10.67% last year, down from 12.11% in 1984. ■

Michigan . . .

➽ Continued from Page 21

pared with a national average of 0.82%.

Mr. Seidman, who is a native of Grand Rapids, Mich., also noted that only four Michigan banks have failed in the past 17 years. Although he would not disclose how many Michigan banks are on the FDIC's "problem list," he did say it is well below the national average.

"I don't think we're facing a major issue that we know of in this coming year," Mr. Smith said. "But believe me, that could change overnight."

A nagging concern, he said, is that the governor's tax fairness proposal could be revived. He said the proposal would raise by 850% the tax that banks pay on their deposits. If the measure passes, Mr. Smith said, the profits of all Michigan-based banks could fall by about 15%.

At the convention, Lyle McKinley, the president and chief executive of the Citizen's National Bank of Cheboygan, was elected president of the bankers group for the coming year. Citizen's National has assets of about $106 million.

In his acceptance address, Mr. McKinley disclosed that the Michigan Bankers Association and the Michigan Association of Community Bankers have agreed to form a joint study committee to find ways to establish cooperative activities.

"The competition is getting tougher," Mr. McKinley said. "There is no room for duplication of services. It's harder to make a buck, and it shouldn't be wasted." ■

on the farmer's 240-acre farm, which included his homestead. The proceeds of the loan were used to purchase the farm property and to pay for operating expenses. In 1981, the farmer sold 160 acres and Federal Land Bank released its mortgage on that portion of the land.

In an attempt to stop a loan foreclosure proceeding on the remaining land, the farmer brought suit against the Federal Land Bank in 1984. While his complaint alleged violations of a number of state and federal statutes, the court concluded that he was claiming relief under the Truth-In-Lending Act.

The Act establishes a one-year period of limitations in which actions for violations of its general disclosure requirements must be brought. The limitations period begins to run when credit is extended through the consummation of the transaction without the proper disclosures. In this case, the farmer waited almost seven years after the loan was extended to file suit. Therefore, the court dismissed the farmer's claims against the Federal Land Bank. ■

Dear Reader, How Are We Doing?

The American Banker wants very much to make sure its coverage of the financial services industry meets your information needs. So would you spend a moment to give us some feedback on the survey of the **Top 300 Bank Lenders to Business** that appears in today's edition? Over the past year we have incorporated many of your suggestions to provide more meaningful information. Please return this questionnaire to L. Michael Cacace, Statistical Chief, American Banker, One State Street Plaza, New York, N.Y. 10004. Telephone 212-943-4836.

"THE CONSOLIDATION OF THE U.S. MORTGAGE INDUSTRY"
A 1986 Research "Must"

Today, some 19,000 traditional lenders originate and service residential mortgages. Tomorrow, thousands may be gone.

Instead, some 15 corporations with combined assets of $665 billion have jumped into the U.S. mortgage business. They want more than 40% of it. The 15 include Sears, which has just announced it intends to be the nation's largest mortgage lender. GMAC. Ford. Prudential. American Can. Merrill Lynch. And more.

In this study of more than 150 pages, SMR Research presents, for the first time, the current strengths and future strategies of each of the aggressive new mortgage players. Data are based on months of primary research, including direct interviews with the important new players.

The study also tells about the workability of origination through captive real estate firms; about new plans in consumer marketing; about computer origination; about the best remaining independent realtors, and about government attitudes toward the impending mortgage shakeout.

For a free Prospectus about this important new study, call or write: Mark S. Kamm, SMR Research Corporation, 382 Route 46, Budd Lake, NJ 07828. (201) 691-1255.

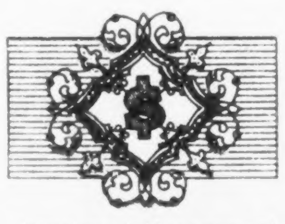
Citicorp Tops Morgan in Managed Trust Assets

By MICHAEL CACACE

NEW YORK — Citicorp has surpassed J.P. Morgan & Co. as the top banking firm in assets managed by its trust department.



Investment Management

Citicorp's trust assets rose 28.2% in 1985, to $50 billion, while Morgan's discretionary assets were up 24%, to $48.6 billion.

Morgan had ranked as the top firm in managed assets for six of the past seven years. The *American Banker* — conforming with changes made by the federal regulators — began using discretionary assets as its measure of trust department size in 1978.

Managed trust assets are assets of accounts for which a trust banking firm is authorized to make investment decisions. Also included are assets in accounts for which the bank recommends, but does not make, investments. Assets of accounts where the bank shares investment power are also included. Managed assets are called "discretionary assets."

Managed Trust Assets

1983-1985 (Millions of Dollars)

	Citicorp	J.P. Morgan
1983	$35,991	$37,543
1984	$39,041	$39,160
1985	$50,057	$48,574

The Top 100 Trust Firms
Tables Begin on Page 27

Morgan was the top firm in discretionary assets from 1978 to 1982. In 1983, Bankers Trust New York Corp. supplanted Morgan as the top firm in trust size. But Morgan regained the rank in 1984.

Citicorp has ranked second to Morgan from 1978 until 1981. In 1982, it dropped to fourth place. But in each of the next three years, Citicorp moved up one notch in the rankings: to third place in 1983, with $36 billion in managed assets; to second place in 1984, with $39 billion; and to first place last year, with $50.06 billion in trust assets.

Bankers Trust, which fell from first

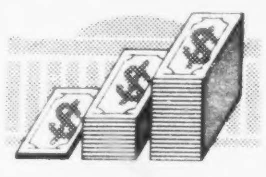
Thrift Regulators Review Options Rules In Wake of Three California Episodes

By ROBERT LUKE

LOS ANGELES — Federal thrift regulators, worried about speculative options trading that led to the failure of two California thrifts and recently delivered a financial blow to another, are reviewing their regulations governing options transactions.



Thrifts

"So far, we have been able to uncover about 40 institutions that have had problems or are continuing to have problems with this sort of thing," said Patrick H. McKelvey, a Bank Board spokesman, referring to an estimate made in May. "We are taking steps to see what we can do."

Added Alvin W. Smuzynski, the Bank Board's assistant director of regional operations: "We are reviewing the clarity of the regulations. If we think they need to be changed or made more clear, we will do that."

Mr. Smuzynski said the Bank Board also is questioning the roles played by brokers in the transactions.

"Certainly if there was any self-enrichment by the brokers based on advice given the association [we would look into that]," Mr. Smuzynski said.

Regulators previously have said that speculative options transactions contributed to the insolvency of Presidio Savings and Loan Association, Porterville, Calif., and Seapointe Savings and Loan Association, Carlsbad, Calif. More recently, Guarantee Savings and Loan Association, Fresno, Calif., said it was forced to take delivery of $1.65 billion in U.S. Treasury securities to avoid recognizing a substantial loss on "unauthorized" put options transactions, which the thrift previously said was used primarily to generate fee income.

In the wake of that announcement, Standard and Poor's Corp. last Friday

Great Western Gobbles Wendy's Financing Arm

By ANDREW ALBERT

NEW YORK — A unit of Great Western Financial Corp. has acquired the financing arm of the Wendy's restaurant chain, which includes 85 of the fast-food hamburger outlets.

Great Western Leasing Corp., a wholly owned subsidiary of the giant Beverly Hills savings and loan holding company, paid $64.5 million in cash for four-year-old Wendy's Capital Corp.

Wendy's International Inc. set up the unit in 1982, during a period of high interest rates, to help finance investors wishing to open fast-food franchises. As rates declined, the need for such a financing service diminished, leading Wendy's International, based in Dublin, Ohio, to sell the unit and rid itself of that funding burden.

The deal, announced last week,

Based on American Banker's survey of the top 200 trust institutions in the nation. **Discretionary assets** are assets of accounts over which an institution is authorized-directly or indirectly-to determine what securities or other property shall be purchased or sold by, or for, the account; or makes recommendations as to what securities or other property shall be purchased or sold by, or for, the account, even though some other person may have responsibility for investment decisions. Assets of accounts over which investment discretion is shared with some other person, such as a co-trustee, are included. The data of market value of these assets is either: (1) any one date within the last 60 days of 1985 (and 1984); or (2) the date of the most recent review of each account. A footnote appears after the name of the institution to describe its type. Type of institution: **(B)** — Commercial bank; **(M)** — Multibank holding company; **(T)** — Nondeposit trust; **(O)** — One-bank holding company. **(a)**—American National Corp., Chicago, is a subsidiary of First Chicago Corp. The 1985 asset figure for First Chicago includes American National Corp., the 1984 asset figure does not. **(b)**— The 1984 data were for MBank Dallas NA, the lead bank of MCorp. The 1984 income data for MCorp were not available. **(c)**— Consolidated to include American National Corp. **(u)**— Consolidation did not include American National Corp. **(†)**— Asset rank of the holding company as of 12/31/85. **(★)**— To avoid double counting, American National Corp. 1985 assets are excluded from the total.

Top 100 Firms in Trust Income

Ranked by Size of Trust Department's 1985 Gross Operating Revenues

Compiled by **American Banker** Copyright 1986

Based on American Banker's survey of the top 200 trust institutions in the nation. **Gross operating income** of the trust department excludes all non-operating credits. **Market value of all trust assets** includes discretionary assets, nondiscretionary assets, corporate trust accounts, and accounts of a strictly custodial nature. An "N.A.", or not available is shown for those firms reporting discretionary assets only. A footnote appears after the name of the institution to describe its type. Type of institution: **(B)** — Commercial bank; **(M)** — Multibank holding company; **(T)** — Nondeposit trust; **(O)** — One-bank holding company.

(a) — American National Corp., Chicago, is a subsidiary of First Chicago Corp. Both the 1985 and 1984 trust income figures for First Chicago are consolidated to include American National Corp., Chicago. **(b)** — The 1984 data were for MBank Dallas NA, the lead bank of MCorp. The 1984 asset data for MCorp were not available. **(c)**— Consolidated to include American National Corp. **(r)** — Based on revised data. **(★)**— To avoid double counting, American National Corp.'s income is excluded from the 1984 and 1985 totals.

Citicorp Tops Morgan in Managed Trust Assets

➳ Continued from Page 1

place in 1983 to third place in 1984, remained in third place last year with $45.5 billion in managed trust assets, up 23.2% from its 1984 total of $36.9 billion.

These are some of the findings of the *American Banker*'s 18th annual survey of the top 100 banks and trust companies in discretionary assets and gross trust income, published today.

Record Rise in Discretionary Assets

Discretionary assets rose a record 23.8% at the top 100 firms last year, to $829.3 billion on Dec. 31 from $670.1 billion a year earlier. The previous record gain was 17.2% in 1982. In 1984, trust assets were up 6.8%.

The main reason for the record increase was the sharp rise in stock and bond prices last year. A rise in securities' prices is reflected in a higher value of discretionary assets.

From December 1984 to December 1985, stock prices, as measured by the Standard & Poor's Corp. 500 index, rose 26%; and bond prices, as measured by the Shearson Lehman Brothers Inc. Long Treasury Bond Index, rose 18.6%.

Among the top 25 banks in the field, sixth ranked Wells Fargo & Co., San Francisco, had the largest increase in discretionary assets. Its assets rose 97%, to $29.26 billion in 1985 from $14.84 billion a year earlier, when it ranked 10th.

According to a Wells Fargo spokesman, about 50% of the increase was attributable to new business generated by Wells Fargo Investment Advisers, a bank subsidiary. The subsidiary has been very successful in attracting new institutional investors to its indexed funds, which emulate the performance of respected stock indexes, such as the S&P 500. The indexed funds help reduce transaction costs to the institutional investor, because the fund is traded, rather than the individual stocks within the fund.

Gross trust income for the top 100 banks and trust companies in the field also rose a record 17.9% last year. The previous record gain was 16.5% in 1980. In 1984, gross trust income was up 15.8%.

The main reason for the record increase last year was the rise in securities prices. In 1984, higher prices for trust services were a major reason for the sharp rise in trust income, compared with the relatively smaller growth in discretionary assets. Trust revenues are dependent on the value of assets under management and a variety of fee-based products, such as securities lending, stock-transfer work, and custodial work.

Morgan No. 1 in Gross Trust Income

For the 18th consecutive year, or since the *American Banker* began keeping track of gross trust income, Morgan was the top firm in the field. Its gross trust income totaled $307.3 million in 1985, up 23.5% from $248.8 million in 1984.

Chase Manhattan Corp. again was second, with $193.3 million, up 25.5% from $154.1 million in 1984, and Bankers Trust remained in third place, with $178 million, up 16.1% from the year before.

Citicorp moved into fourth place, with $176 million in gross trust income last year, up 15.1% from $152.9 million in 1984, when it ranked fifth.

Cates Consulting Analysts Inc., New York, in its annual survey of trust departments, called Trustcompare, found that pricing of trust services was basically unchanged from 1984. In addition, the survey found that overall trust profitability — as measured by pretax net income — was unchanged in 1985, after rising steadily for several years.

The Cates survey also measured the importance of trust operations to the profitability of banks. For the universe of 156 banks participating in the Cates survey, trust operations contributed 5 basis points to these banks' mean return on average assets of 0.87%. For banks with gross trust revenues greater than $25 million last year, trust operations contributed 8 basis points to their mean return on equity of 0.87%. And for banks with gross trust revenues of $15 million to $25 million, trust operations also contributed 8 basis points to their mean return on equity of 0.75%.

Another important finding of the Cates study was that the growth in institutional products was double that of personal trust products last year. Among the institutional products, corporate bond trusteeships and nonmanaged employee benefit accounts showed especially strong growth.

In a corporate bond trusteeship, the bank acts as trustee for bond issues. The bank provides record keeping, interest disbursement, and has some fiduciary responsibilities. There was substantial growth in the issuance of corporate bonds last year because of the lower interest rate environment. In nonmanaged employee benefit accounts — which include master trusts, pension plan accounts, and profit-sharing accounts — the bank provides record-keeping services. ■

Dear Reader, How Are We Doing?

The American Banker wants very much to make sure its coverage of the financial services industry meets your information needs. So would you spend a moment to give us some feedback on the survey of the **Top 100 Trust Firms** that appears in today's edition? Over the past year we have incorporated many of your suggestions to provide more meaningful information. Please return this questionnaire to L. Michael Cacace, Statistical Chief, American Banker, One State Street Plaza, New York, N.Y. 10004. Telephone 212-943-4836.

1. How would you **change** the tabulation to make it more useful? What would you add?

2. What do you like **best** about this tabulation?

3. What do you like **least** about this tabulation?

4. **How** do you use this information in your work?

5. What **new** statistical survey would you like to see?

Chief Shareholder May Join First Tennessee Board

Special to the American Banker

MEMPHIS — First Tennessee National Corp. chairman Ronald A. Terry has left open the possibility that real estate developer Avron Fogelman, the largest shareholder in the Memphis-based bank holding company, may join its board of directors.

Earlier this month, Mr. Fogelman filed documents with the Securities and Exchange Commission saying that he owned more than 5% of the stock of First Tennessee. In an interview, he said he owned about 745,000 shares, accumulated over several years for investment purposes.

"Mr. Fogelman and I have discussed his potential membership on the First Tennessee board several times over the years," said Mr. Terry in a telephone interview, "and I'd be happy to propose him to the board at any time he had the time to serve."

After Mr. Fogelman made his stock position public, he said it was not his objective to obtain a seat on the board.

The men have not discussed or considered electing a representative of Mr. Fogelman other than himself to the board, Mr. Terry said.

If Mr. Fogelman were to get a board seat, the action would have to come next April at the company's annual meeting, when directors normally are elected, Mr. Terry added.

Mr. Fogelman is a co-owner of the Kansas City Royals baseball team. Through Fogelman Properties, he builds, owns, and manages apartment complexes in the South, Southwest, and Midwest. ■

Lloyds . . .

➳ Continued from Page 44

equivalent of about $1.96 billion, about 12% more than the first offer, giving Standard Chartered a valuation of about $1.75 billion.

Lloyds Bank has so far earned about 75% of its profits in the United Kingdom, while Standard Chartered's earnings come mainly from its international operations. These include a 39% holding in Standard Bank Investment Corp., or Stanbic, South Africa's second biggest commercial bank, which contributed about 13% to Standard Chartered group earnings in 1985. However, Lloyds said South African investors expressed an interest in acquiring full ownership of Stanbic, in which Lloyds said it would wish to sell its holdings. ■

Firstbank of Illinois To Buy Six More Banks

Special to the American Banker

ST. LOUIS — Firstbank of Illinois Co. has announced the acquisition of six banks located in southern Illinois towns that will put it near the $1 billion mark in assets.

Firstbank, based in Springfield, Ill., said it was paying $37.9 million — $27 million in cash and the rest in stock — for controlling interest in the United Illinois banks of Collinsville, Troy, New Athens, Benton, Cobden, and Dahlgren.

The banks are in six one-bank holding companies controlled by three St. Louis lawyers: Robert L. Sweney, John J. Goebel, and William M. Van Cleve. Other principal owners are Richard E. Zemenick, the group's chief executive, and James P. Sweney, chairman of the Collinsville bank.

Mr. Van Cleve said the purchase price was 1.8 times the group's Dec. 31 book value. The investor group acquired the banks between 1969 and 1980, he said.

United Illinois Banks had combined assets of $275 million on Dec. 31, and they earned $3.4 million last year. Firstbank's assets are $556 million, and it earned $4.06 million last year.

Firstbank owns two banks in Springfield and one in Taylorville, Ill., along with a mortgage company and a life-insurance company. It agreed in March to acquire Elliott State Bank of Jacksonville, which has assets of $160 million.

John E. Brubaker, president of Firstbank, said the company was positioned "for substantial internal growth, as well as further acquisitions."

Dean Countryman, a vice president, said First Bank was "having conversations" with banks in other parts of Illinois but had no immediate plans for interstate acquisitions. ■

AMERICAN BANKER CAN BE READ DAILY VIA ONLINE SERVICES

American Banker stories and commentaries can be read through several electronic sources. These sources can provide early-morning access to the news, the ability to search for stories on chosen subjects in past editions, and clipping services, in which stories on preselected topics are delivered automatically to the reader. Telephone and terminal equipment are needed to use these services. A brief description follows.

BRS INFORMATION TECHNOLOGIES — Contains today's news stories in financial services, a financial services news summary, daily executive job changes, a daily calendar of events in Washington, and more. Available beginning 6:00 a.m. Eastern Time. Call (800) 223-3009. In New York State, call (212) 943-9893.

DIALOG — FINIS (file 268) indexes and abstracts marketing articles from American Banker. NewsSearch (file 211), indexing only. Trade & Industry Index (file 148), indexing and full text, no searching of text. Trade & Industry ASAP (file 648) indexing and full text with searching capabilities. Call (800) 227-8431.

NEWSNET — Major stories and articles. Full text search and retrieval available at 6:30 a.m. Eastern Time. Call (800) 345-1301. In Pennsylvania, call (215) 527-8030.

NEXIS® — Provides the full text of all American Banker features and news coverage since Jan. 2, 1979. Available approximately 48 hours after print publication date. Electronic clipping service available for automatic updates. FINIS, with indexing but not full text, also available. Call (800) 227-4908.

AN AMERICAN BANKER SPECIAL REPORT

Citibank Tops Bankers Trust as No. 1 in Mergers

Three Commercial Banks Exceed $1 Billion in Deals

By ANDREW ALBERT

First of a Series

NEW YORK — Citibank nipped Bankers Trust Co. and emerged the No. 1 commercial bank adviser in mergers and acquisitions last year, according to the *American Banker's* first investment banking survey.

Tiptoeing into the red-hot mergers and acquisition business, three of the nation's 10 largest banks — Citibank, Bankers Trust Co., and Manufacturers Hanover Trust Co. — said they advised companies in deals worth more than $1 billion in 1985. Only Bank of America showed a significant decline in its merger business.

For the first time, the nation's largest banks disclosed the precise value (by purchase price) and number of merger and acquisition deals they handled as financial advisers. The new information confirms that, by and large, commercial banks are strengthening their commitment to the merger business, but they remain woefully behind the merger and acquisition units of the big-name investment banks.

Their figures include only 1985 advisory assignments that resulted in completed mergers, acquisitions (both friendly and hostile), and divestitures. The tally excludes any merger and acquisition deal in which the banks acted as a principal and their own adviser. Also excluded are leveraged buyouts in which the banks helped finance the deal but were not the primary advisers.

Through questionnaires and follow-up telephone calls, the *American Banker* polled the 10 largest U.S. banks. Of those institutions, seven disclosed their merger and acquisition figures. Security Pacific National Bank said it did not

New Breed of Commercial Banker Taking First Steps on Wall Street

THE NEW INVESTMENT BANKERS

NEW YORK — The nation's biggest banks are at an awkward stage.

Once handsomely rewarded for carrying loans to corporate America on their balance sheets, large commercial banks have spent the first half of the 1980s discovering that life isn't that simple anymore. One by one, giant U.S. lenders are deemphasizing corporate loans and instead trying to collect hefty fees for escorting commercial borrowers into foreign and domestic securities markets.

What's evolving is a new breed of U.S. financial institution — one that is still willing to dole out its own funds at attractive yields but is just as eager to act as middleman between borrower and investor. Some have renamed themselves investment banks, hoping to assume the slick deal-making image of their seasoned Wall Street counterparts. Others prefer to be called merchant banks, a label used to describe old-line London houses that finance trade with a combination of lending and

Reporters' Notes

Not So Offshore

Confidentiality laws should be "no shield" for outlaws who might be tempted to hide money in the Cayman Islands, declared G. Peter Lloyd, Britain's governor for the Caribbean offshore banking center. With that declaration, he signed a treaty with the U.S. State Department envoy Ronald I. Spiers to exchange information on insider trading. The treaty extends another signed in 1984 to combat money laundering.

Justice Department attorneys are pleased with the progress. "The 1984 treaty has been useful in money laundering investigations," said Tom Snow, of the criminal division's office of international affairs.

The Cayman Islands, still a British colony, has a population of 17,035 citizens, 450 banks, and 274 insurance firms.

Ex-Im's Debate

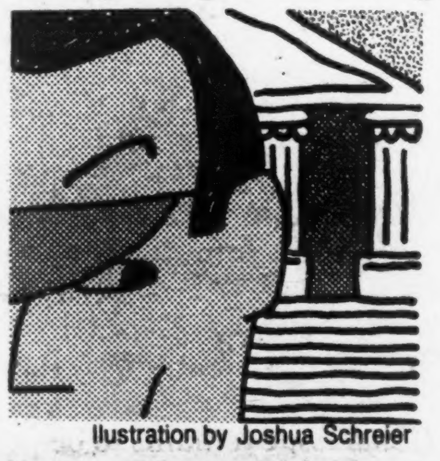

Illustration by Joshua Schreier

The Export-Import Bank, which helps American businesses sell goods abroad by subsidizing or guaranteeing loans, understated its losses for the past two years by as much as $1.9 billion, according to the General Accounting Office.

The "congressional watchdog" agency, reviving an old bone of contention, said in an audit report issued last week that the bank's $17.7 billion in assets includes $4.9 billion of problem loans for which no reserves have been set aside.

"We disagree with them," responded James K. Hess, the Ex-Im Bank's treasurer-controller. The agency does not maintain a loan-loss reserve, he said, but instead writes down or charges off loans as soon as the bank decides they are a problem.

The GAO report, he added, concluded that the international debt crisis would affect the bank's loans in a number of countries, but declined to specify which countries would be likely to default.

"We feel that all of them will repay," he said.

Financial Services' PACs Swell In Size and Number

Influence, Access Bought as Elections Near

By BARTLETT NAYLOR

In June, the American Bankers Association's political action committee, known as BankPac, gave $5,000, or the maximum allowed under campaign laws, to Rep. Dan Rostenkowski, D-Ill.

This is the same Mr. Rostenkowski who this week will attempt to engineer a massive tax increase for the banking industry.

"It's tribute money," says J. Denis O'Toole, one of the ABA's top lobbyists. Mr. Rostenkowski is slated to chair the Senate-House tax conference, which will rewrite the U.S. tax laws.

Welcome to the expensive world of political contributions.

In 1985 — not an election year — members of the Senate Banking Committee took in a collective $2.3 million. Members of the House Banking Committee raked in about $2 million.

For the 1984 campaign, PACs unloaded $28.6 million on Senate candidates, 27% more than in the 1982 campaign, according to Common Cause, a group that encourages honest politics. To elect the 435-member House, PACs donated $60.4 million in the 1984 race, nearly 50% more than in the previous race.

Not surprisingly, there are many financial PACs, and they trail only energy firms as the leading corporate PAC givers. Among them are 265 bank PACs. Most of these are organized by single institutions, such as the National Bank of Detroit's "good citizen committee." The largest is BankPac. It raises and spends about $1 million a year.

Collectively, the 165 bank PACs donated an average of $27,000 to each member of the House Banking Committee in 1984, or $1.3 million.

The number of PACs has grown steadily. In 1974, there were 608 PACs, and contributions to federal candidates totaled $12.5 million. By July 1985, there were 4,000 registered PACs, and they gave $112.6 million to federal candidates in the 1983-84 election cycle.

"The rumor is that you can make a lot of money on the banking committee," says Rep. James Cooper, D-Tenn., who is a member.

However, banking committee members do not dominate the list of top PAC recipients in Congress.

In the Senate, banking committee member Sen. Philip Gramm, R-Tex., topped the list of all PAC beneficiaries, with $1.3 million in 1984.

In the House, the fattest PAC funds for banking committee members are being amassed by two Democrats: Rep. Carroll Hubbard Jr., D-Ky., who has taken in $160,000 through the first quarter of 1986, almost more than in the entire election cycle in 1984; and Rep. Paul Kanjorski, D-Penn., who has socked away $134,000 in the early going of the 1986 race to fend off a bid by a youthful Reagan ally named Marc Holtzman.

Congress' banking committees are by no means the only major targets of the financial industry PACs. Witness the ABA contribution to Mr. Rostenkowski. Members of the tax-writing House Ways and Means and Senate Finance Committees received a collective $1.4 million from banking and financial services PACs for the 1984 election, according to a survey by Common Cause, a watchdog group.

PACs were established as a means of limiting the influence of money in politics. No PAC can donate more than $10,000 to a candidate during an election, counting any primary.

Creative donors, however, can find their way around tight limits. Rosaura Ulvestad, listed in FEC reports as an Anaheim, Calif., "homemaker," curiously thinks so much of House Banking Committee chairman Fernand J. St Germain that she gave $1,000 to his reelection campaign. It's not so curious, really; Larry Ulvestad is chairman of the Anaheim Savings and Loan Association, which also chipped in $1,000.

House Banking Committee Members Facing Reelection

Top 10 Ranking Democrats Seeking Reelection

	1984	1985	1st Q 1986
Fernand J. St Germain, R.I.	$228,800	$88,550	$9,000
Henry Gonzalez, Texas	$24,758	0	$17,900
Frank Annunzio, Ill	$91,123	$39,682	$3,750
Walter Fauntroy, DC	$24,815	$16,020	Declines PACS now
Stephen Neal, N.C.	$178,406	$73,450	$14,500
Carroll Hubbard, Ken.	$164,950	$112,400	$48,050
John LaFalce, NY	$72,268	$27,013	$2,750
Mary Rose Oakar, Ohio	$118,289	$48,384	$16,700
Bruce Vento, Minn.	$113,071	$42,910	$2,049
Doug Barnard, Ga.	$113,875	$37,300	$22,250
Robert Garcia, NY	$123,672	$29,250	0
Charles Schumer, NY	$56,845	$3,050	0

Top Five Republicans Seeking Reelection

	1984	1985	1st Q 1986
Chalmers Wylie, Ohio	$120,503	$31,803	$30,400 (3/31/86)
Stewart McKinney, Conn.	$131,257	$91,685	$16,500 (3/31/86)
Jim Leach, Iowa	Declines PAC contributions		
Norman Shumway, Calif.	$140,451	$36,965	$11,000 (5/14/86)
Stan Parris, Va.	$269,063	$53,159	$64,309 (3/31/86)

(Funds collected for most recent election.)

Research by Patricia Beckman

Chairing the House Banking Committee has been lucrative to Mr. St Germain. According to a study commissioned by the *Providence Journal,* he was a below-average fund-raiser before assuming the committee chair. In his first term as banking chairman, he doubled his campaign chest, and he drew a like amount for the 1984 election. Yet, he waltzed to victory in each election, spending only a fraction of his funds.

Members elected before the 1974 campaign financing reform laws can pocket, or donate to the Treasury, any PAC money not spent when they retire from Congress.

As *Providence Journal* reporter John Mulligan notes, "St Germain's fund-raising is consistent with the common-sense political rule that if you have lots of money, you scare off would-be challengers."

At the American Bankers Association, PAC disbursement is "an art, not a science," says Mr. O'Toole. "The criteria for giving is a combination of what the member has done for the industry, and what their financial needs are in terms of reelection."

Donations by Financial PACs

		1985 to 1st 19686	1983-84
1)	American Bankers Association	$773,028	$1,146,354
2)	U.S. League of Savings Assoc.	$483,077	$467,875
3)	Bear Stearns & Co.	$409,699	$585,268
4)	Credit Union National Assoc.	$312,484	$319,067
6)	Citicorp	$259,785	$307,759
7)	Barnett Banks of Florida Inc.	$239,501	$230,612
8)	E.F. Hutton Group Inc.	$215,288	$246,242
9)	Beneficial Management	$188,906	$228,627
10)	Morgan Stanley & Co.	$183,893	$236,309
11)	First City Bancorp.	$182,649	$307,649
12)	Household Finance Corp.	$150,641	$165,284
13)	Independent Bankers of America Assoc.	$149,166	$143,705
14)	Merrill Lynch & Co.	$144,205	$282,297
15)	Investment Company Institute	$103,456	$113,212
16)	Assoc. of Bank Holding Companies	$83,082	non-existant
17)	Securities Industry Ass'n. Inc.	$60,890	$79,382
18)	National Council of Savings Instit.*	$55,162	$99,890
19)	National Consumer Finance Ass'n (American Financial Services Ass'n	$54,292	$106,054
20)	Avco Corp.	$49,774	$209,099

*The National Association of Mutual Savings Banks, whose figure for 1984 is cited, merged with the National Savings and Loan League three years ago to form the National Council of Savings Institutions.

That boils down to giving the maximum $10,000 per candidate to every ABA-backed senator up for election, since each of the 100 members in the august body counts for nearly five representatives in the 435 member House.

With the balance of the $1 million that BankPac will disburse, the ABA looks first at the House Banking Committee, the tax-writing Ways and Means Committee, and the Agriculture Committee. The House Judiciary, Energy and Commerce and Rules Committees are also important.

Since there is not enough money for every desirable candidate, "it becomes a question of allocating scarce resources," Mr. O'Toole explains. ABA staffers draw up a detailed list of recommendations. This is studied, amended and eventually approved by the 15 bankers on the BankPac Committee.

Senate Banking Committee Members Facing Reelection

Republicans	1980 race	1985	1st Q 1986
Jake Garn, Utah	$285,909	$170,950	$14,000
Alfonse D'Amato, NY	$273,260	$20,950	$5,000
Slade Gorton, Wash.	$151,038	$414,669	$62,650
Matt Mattingly, Ga.	$116,419	$284,960	$87,975
Democrats			
Alan Cranston, Calif.	$418,316	$519,825	$162,311
Christopher Dodd, Conn.	$268,388	$358,202	$43,900
Alan Dixon, Ill.	$287,154	$368,637	$57,148

Senior members of committees often receive generous donations, "but we make investments in young members," Mr. O'Toole says. "It's an investment in the future."

Lobbyists hold a schizophrenic view about the power of PACs. Many tell potential donors that their contributions are needed to elect members sympathetic to the industry's needs. Yet, when explaining what a PAC donation does, many lobbyists discount them as mere door openers.

"The principal reason for giving is to give your name visibility in eyes of staff or various congressman. It doesn't guarantee you their vote," says John Duffy, an attorney and PAC consultant with Pierson, Ball and Dowd, a Washington law firm.

"Our PAC donation is evidence of support for a candidate," says Gale Sellens, the president of the Denver Natonal Bank and the chairman of BankPAC. "In return for this, we hope to have the opportunity to sit down and talk to the member of Congress regarding our position."

Says Mr. Duffy, "The money is far too little to make it an effective tool. It is a way of indicating support. Many corporate PACs are door openers. They want as many Congress members' doors open as possible."

Former Rep. Barber Conable, now the president of the World Bank, believes that corporate PACs are "unsophisticated."

"They view contributions as access money. It is distressing that 56% of corporate PAC money in 1984 went to Democrats," he said in an interview last year before he was named to his current position.

Labor unions are not embarrassed to target funds to influence the makeup of Congress. However, Mr. Conable says, "Corporations feel pressure to be bipartisan. They rely too heavily on their Washington people who see PAC funds as a way to get into a member's office."

In fact, it is often said that PAC money actually stalls legislation. Because many members of the banking committees are undecided on certain issues, often they are plied with contributions from industries on all sides.

"Members love hearings because it raises the threat of a change and gets the PACs money churning," says one committee staffer.

What stalls banking legislation, says Mr. Sellens of the ABA, is "a matter of priorities." There are simply more important matters to consider.

Many public interest groups, such as the Ralph Nader-founded U.S. Public Interest Research Group, call for abolishment of PACs. The organization cites a 1984 Harris poll indicating that 70% of Americans feel that candidates for federal office should not take any PAC money.

Some members do not accept political contributions, such as Sen. William Proxmire of Wisconsin, the ranking Democrat on the Senate Banking Committee, and Rep. Jim Leach of Iowa, the third ranking Republican on the House Banking Committee.

Mr. Sellens, however, thinks that politics is an "organized game," and organized games cost money. To adopt public funding of presidential campaigns, as some consumer groups have urged, he says, simply would create an unwieldy "pot of money." ■

Citibank Advises Most Mergers in '85, but Number for BofA Slips

➸ Continued from Page 1

offer merger advice last year, though it planned to start such a service this year. Morgan Guaranty Trust Co., perceived as a commercial bank leader in the merger and acquisition field, declined to participate. Chemical Bank, whose officials have acknowledged a lack of success in the merger field, also bowed out of the survey.

Citibank's 30 merger and acquisition specialists captured the top spot by guiding corporations through 26 deals worth $1.5 billion last year, up markedly from 1984, when it handled 19 transactions worth $400 million.

Despite their growth, the banks' merger operations are dwarfed by every big Wall Street firm in the business. Goldman, Sachs & Co., for example, completed 145 merger deals last year, compared to Citibank's 26. Goldman Sachs' total includes 73 transactions, each worth more than $100 million; Citibank completed five such deals.

Several Newcomers Optimistic

"Within five years, we'll be among the top three or four M&A shops [in the nation]," said Kamal Mustafa, one of two managing directors running Citibank's merger unit. His optimism is echoed at a handful of other money centers that only last year became serious about selling merger advice.

Second-place Bankers Trust handled 17 merger and acquisition deals worth $1.3 billion in 1985, after completing 10 deals worth a mere $300 million the previous year.

"Until 1985, we had an apparent lack of expertise," said David E. Dougherty, who last February was named managing director in charge of the bank's merger and acquisition group, after running its public finance group for five years.

Bankers Trust earned about $6 million in advisory fees last year, and, according to Mr. Dougherty, his group is on its way to doubling its fee income this year.

The hefty prices paid for such guidance have made the merger and acquisition business highly attractive to the fee-starved commercial banks. Merger advisory fees generally are based on a sliding scale, with a $100 million merger deal commanding roughly a 1% fee, or $1 million; a $500 million deal often carries a 0.5% charge, or $2.5 million.

Currently, Bankers Trust is advising Petroleos de Venezuela SA, the state-owned oil company of Venezuela, in its proposed acquisition of a 50% interest in the Citgo Petroleum Corp. from the Southland Corp. for a reported $300 million. The deal, likely to carry a fee of well over $1 million, was announced by Petroleos de Venezuela in February and is set for completion in September.

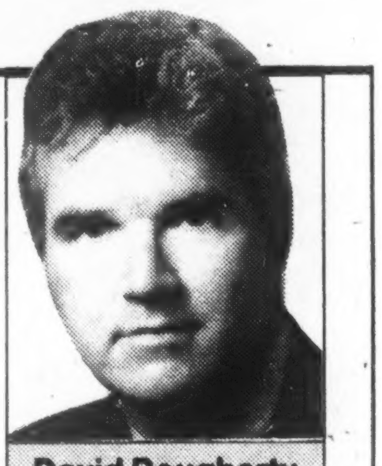
Bankers Trust Co.'s relationship with the Venezuelan oil company exemplifies the expertise that large commercial banks are developing in international merger deals — a field where they believe that they can best challenge their Wall Street rivals.

About a third of Citibank's completed deals involved cross-border business combinations. The bank had a virtual stranglehold on the Brazilian market, handling at least three-quarters of that country's mergers and acquisitions last year. "We are the only game in town there," Mr. Mustafa said. For example, Citibank advised Du Pont Polidura, a Brazil-based paint subsidiary of the Du Pont Co., in its February merger with Tintas Renner, a Brazilian paint company.

The three top-ranked firms likely would have been different if Morgan Guaranty, an organization that rarely shows its hand to competitors, had chosen to take part in the survey. Last February, Morgan raised the status of its merger and acquisition business by separating the unit from the bank's massive corporate finance group.

Operating under the leadership of Roberto G. Mendoza Jr., an executive vice president with a solid reputation in the commercial banking side, Morgan's mergers and acquisitions unit reportedly has handled a few sizable advisory assignments so far this year, including representing Hiram Walker Resources Ltd. in the $1.9 billion "purported" sale of its liquor business to Allied Lyons PLC. Currently, Hiram Walker is attempting to withdraw from that deal in order to sell its unit to another suitor.

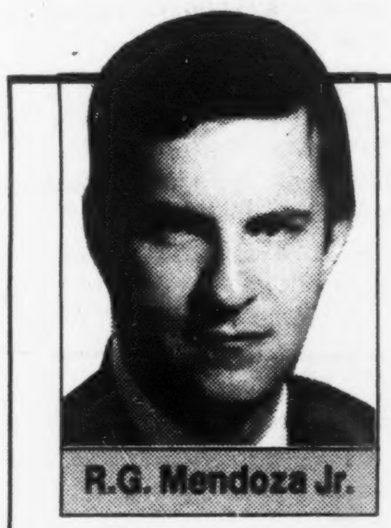
> **'Until 1985, we had an apparent** lack of expertise.' But by the end of this year the bank's M&A unit hopes to double its advisory fee income.
>
> **— David E. Dougherty, Bankers Trust**



David Dougherty

Hanover's Surprise Showing

With Morgan bowing out of the survey, Manufacturers Hanover, not widely known for its prowess in the merger and acquisition field, surprised some with its No. 3 ranking. The bank said it advised clients in 29 deals worth $1.05 billion last year. It did not disclose figures for 1984, when the bank began devoting greater resources to the business.



R.G. Mendoza Jr.

> **Roberto G. Mendoza Jr. runs** Morgan Guaranty's mergers and acquisitions unit. Morgan did not participate in **American Banker**'s survey but is perceived as one of commercial banking's strengths in the business.

Of its 29 completed deals, Manufacturers' merger and acquisition advisory group, by itself, completed 15 deals — including three international transactions — worth about $250 million, said Douglas Ebert, the bank's executive vice president for investment banking. In the other 14, the merger unit acted as primary adviser, while other sections of the bank provided financing.

Manufacturers' merger unit, with 11 professionals, suffered a setback in May, when C. William Schroth, an executive vice president in charge of mergers and acquisitions and other merchant banking activities, resigned because of a planned reshuffling of his unit. Mr. Schroth begins work today at the First Boston Corp., a major Wall Street house that hired him to run the currency swaps and currency bond origination business.

In mid-June, the bank announced a reorganization of its entire investment banking sector, following a second resignation — this one by Garry R. Southern, who was senior vice president for asset sales. As part of the changes, Mark G. Solow assumed responsibility for all merger advisory operations and will continue to oversee the bank's leveraged buyout unit.

Of the banks that responded to the survey, only Bank of America reported a decline in its merger business last year. The four-year-old merger and acquisition unit advised clients in 18 deals worth $700 million, down more than 50% from the $1.5 billion worth of deals it handled in 1984. Bank of America, suffering financial difficulties in several other areas last year, finished the year No. 5 in the new merger and acquisition ranking.

"1985 was not a very good year," said Jonathan F. Murphy, before he resigned in June as head of mergers and acquisitions at Bank of America's New York office. His announced departure was part of a broad reorganization last month in the bank's corporate finance section, which placed Jamie B. Stewart, a former Crocker National Corp. executive, in charge of investment banking.

Mr. Stewart assumed control over several units headed by Paul Applegarth, who resigned as head of North American investment banking, and over the merger and acquisition operations that Mr. Murphy had headed. Although Mr. Murphy did not give a specific reason for his unit's decline last year, he pointed out that the group completed 14 more deals in 1984 than it did in 1985.

He estimated his unit would complete about 20 deals, valued at $1 billion, by the end of this year. With 16 merger and acquisition specialists in New York, San Francisco, and London, the bank assisted companies in four international deals last year and 12 the year before.

At Chase Manhattan Bank, the merger group assisted clients in nine deals worth $750 million last year, enabling it to finish slightly ahead of Bank of America, with a No. 4 ranking. In 1984, the bank was a financial adviser in seven deals worth $500 million.

Hoyt Ammidon Jr., the merger chief at Chase, said his unit has become far more selective since it officially entered the business in 1979, but he would not disclose the minimum fee that it would accept on a deal.

In just its third full year of business, the First National Bank of Chicago's merger unit guided corporate clients through 16 deals worth $640 million, including one that generated more than $1 million in fees. In 1984, the bank handled only nine transactions, with a total value of $300 million.

Andrew Robertson, the vice president who runs day-to-day operations of First Chicago's merger and acquisition group, portrayed his unit of 15 professionals as one that is expanding rapidly. In addition to hiring five merger specialists this year, he said his group was considering broadening its business to advise companies in launching hostile tender offers.

Mr. Robertson said the bank was relying on all segments of the banking company to generate new merger and acquisition business. Among its biggest 1985 deals: First Chicago represented the Goodyear Tire & Rubber Co. in its acquisition of Petrolane Inc., a Long Beach, Calif.-based automotive services operation.

Earlier this year, the firm advised Britt Airways, a Midwest commuter airline, when it was sold to People Express Inc. First Chicago would not disclose the value of those deals but said they were among the biggest handled by the bank last year.

Said Mr. Robertson, echoing the commercial banking industry's sentiment: "We don't intend to scare [the big investment banks] immediately. But we and other banks expect to be in this business for the long haul."

Tuesday's segment in this five part series will look at commercial banks as arrangers of interest rate swaps.

MBank . . .

➸ Continued from Page 3

banks that are owned by out-of-state parents from soliciting deposits in Delaware.

"So MBank USA has no natural funding sources there," Ms. Barmat said.

If a purchased credit card debt turns sour and monthly payments become overdue, Manufacturers Hanover and the other syndicate members would be left with no recourse under the terms of the agreement with MCorp.

However, Ms. Barmat said, the purchasers of the loans included a "credit cushion" in the agreement that allows them to pay less than face value for their purchased receivables. She would not disclose the size of the discount.

Ms. Barmat said the transaction was modeled roughly after one that Manufacturers Hanover Agent Bank Services Corp. structured for Texaco in January — a deal in which a pool of banks continuously purchases the oil company's credit card receivables.

Ms. Barmat said the deal conceivably could be structured as a sale of securities if the syndicate members acted as middlemen between MBank and other investors seeking to buy credit card debt.

However, federal law prohibits commercial banks from underwriting registered securities, making it difficult, but not necessarily impossible, for a bank to act as a middleman in such a deal. ■

Banks' Profits on Deals Drop Sharply As Interest-Rate Swap Market Grows

CHICAGO — Along with the explosion in the U.S. interest-rate swap market has come a sharp decline in the profits that bankers are able to realize on their swap deals.

"The ability to do a deal with a 10-basis-point [bid/offer spread] is difficult," said Dave Edston, a vice president and the head of U.S. dollar interest-rate swaps at the Bank of America.

As swaps have become more commonplace, almost commodity-like in their essence, the profits to swap dealers — banks — have dwindled.

"I just see those spreads getting more and more narrow," Mr. Edston said.

The bid/offer spread refers to the difference in price that a dealer would pay to receive one side of a swap and the amount it will cost the dealer at a later date to lay the swap off.

The basic swaps — or "plain vanilla" deals, as they are called — are responsible for the significant growth in volume that has occurred over the last three years. As volume has increased, however, profits on individual deals have shrunk. These changes are a normal part of what happens when competition in corporate finance heats up and more players enter the market.

"With competition, you have greater efficiency in the market, as it becomes more of a trading environment and not corporate finance," Mr. Edston said.

As a dealer, however, he has to be concerned with whether the return to the bank is adequate and whether the credit risk is being accounted for properly in the pricing of the swap.

Some swap dealers have estimated the current average bid/offer spread at seven to ten basis points, although in an aggressive environment it has gone as

Banks Outstrip Wall Street in Swap Market

Citibank No. 1 in 1985; Bankers Trust Is Second

By LISABETH WEINER

CHICAGO — Commercial banks, and not the big Wall Street investment houses, dominated the interest-rate swap market last year — distinguishing the swap from most other innovative corporate finance tools.

THE NEW INVESTMENT BANKERS
SECOND OF A SERIES

And Citibank, by a fairly wide margin, emerged as the nation's premier swap dealer, not only compared to other commercial banks but among all financial institutions. At the end of 1985, Citibank had $36.4 billion in swaps outstanding, well above the $23.5 billion in swaps outstanding reported by second-place Bankers Trust Co.

Increased competition in the swap markets has narrowed spreads and profits considerably. Nonetheless, every big bank is anxious to remain a major player in swaps and nobody wants to be left behind.

These are among the findings of the *American Banker's* first investment banking survey, which ranked commercial banks by their involvement in five different lines of investment bank-

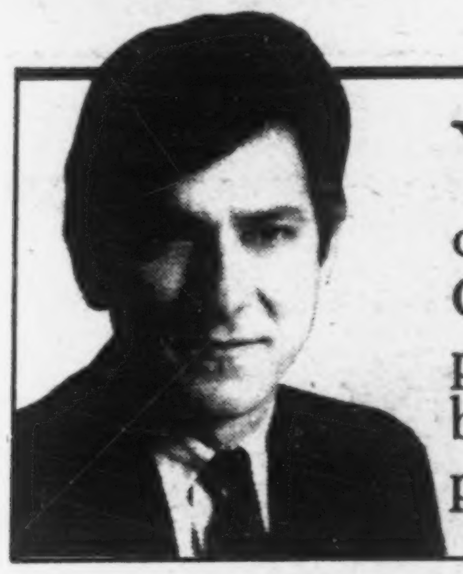
Banks in Survey Account for About 76% of Outstanding Swaps

➻ Continued from Page 1

ing businesses. In the swap field, banks were ranked by their outstandings as of Dec. 31, 1985, a figure that eight of the 10 biggest banks disclosed voluntarily in their annual reports. The banks did not distinguish between interest-rate swaps and currency swaps in the reports, but the bulk of last year's volume involved interest-rate deals.

Outstandings — known technically as the notional principal of swaps outstanding — measure an institution's swap activity over the long run. The number does not necessarily reflect new swaps booked in 1985.

Interest-rate swaps are exchanges of cash flows between two or more parties. In its simplest form, a swap is accomplished when company A trades its fixed-rate interest payment for Company B's floating-rate interest payment.



Yves de Balmann, vice president in charge of interest-rate swaps for Citibank. Grateful for the bank's deep pockets, he says 'the size of our capital base is important in our ability to participate as a major dealer.'

Swaps are motivated by a variety of factors, but they usually boil down to taking advantage of some market discrepancies, which reduces the cost of debt to the customer.

Developed in the late 1970s as the outgrowth of parallel loans or back-to-back loans, swaps have exploded into one of the hottest and most complex financing instruments available to corporate America.

Although swaps are not as profitable now as they were when the market first began, banks still are recognizing fair profits for their work. The average interest-rate swap deal is about $25 million, which could result in an annual per-deal profit of about $25,000. And banks can earn even more by arranging more complex interest-rate swap transactions, involving the use of options, warrants, and other "bells and whistles."

Looking beyond direct profits, a swap also can be used as a sweetener, thrown in at the last minute to secure a deal. A bank, for instance, might win an underwriting of a Eurobond by offering to convert the proceeds of the bond sale into dollars through currency swaps.

Except for commercial loans, swaps represent the only corporate finance product clearly dominated by the nation's largest banks.

Banks participating in the *American Banker* survey accounted for about 76% of the $170 billion in total swaps outstanding — a market defined by the International Swap Dealers Association, a trade group working to standardize the record-keeping of swaps. It counted the outstandings of its 33 members, which include six of the 8 banks shown in the accompanying chart, but not Chase Manhattan Bank or First National Bank of Chicago. The association said nearly 7,000 swap contracts have been executed since 1982.

"Swaps are the first product where neither investment bankers or commercial bankers were dealing from strength [when the market began budding four or five years ago]," said Donald Layton, senior managing director in charge of asset/liability management at Manufacturers Hanover Corp. Today, big banks are far more recognizable in the swap market than the major Wall Street firms.

Salomon Brothers Inc., which won't reveal the size of its swap portfolio, is considered the biggest swap dealer among securities firms, with some estimating its outstandings at about $15 to $20 billion. That is considerably smaller than Citibank's swap portfolio and perhaps smaller than three other New York money center banks.

One of those money centers, Bankers Trust, booked $15.6 billion in interest-rate swaps and $1.1 billion in currency swaps in 1985 alone. Bankers Trust said its swap team generated $30.3 million in revenues last year.

Bankers Trust, followed by third-place Manufacturers Hanover, with $22.6 billion outstanding, and No. 4 Morgan Guaranty Trust Co., with $21.6 billion outstanding, were all crowded together in the rankings.

As demand for these innovative risk-management tools increases, so does the need for well-skilled swap specialists. Members of the financial community have grown accustomed to news of mass defections and hirings of star swappers.

Fifth-ranked Chemical Bank, with $13.8 billion in year-end outstandings, has become the latest revolving door for swap specialists. On June 12, the bank announced the appointment of six professionals to its worldwide swaps group. Just a few weeks earlier, five members of Chemical's New York swap team left en masse to join Morgan Grenfell, a London merchant bank.

First Chicago, placing sixth among leading commercial banks with $12 billion in outstandings, continued to expand its swap unit last year. The swap team booked 304 swaps in 1985, worth $5.6 billion, compared to $4.2 billion from 222 new swaps in 1984.

Chase Manhattan Bank also beefed up the size of its portfolio last year, conducting 270 swaps worth about $6 billion. Chase ranked seventh, with $10 million in outstandings at yearend 1985.

Bank of America took the eighth spot, with $7 billion in swaps outstanding. Continental Illinois and Security Pacific National Bank of Los Angeles declined to disclose the size of their swap business. Explaining Security Pacific's decision to withhold its swap figures, a bank spokeswoman said, "Nobody in this field likes to toot their horn unless they feel very confident that they have a horn to toot." Swap dealers from other banks point out that Security Pacific spent most of last year building its swap department and that it has been extremely aggressive and active thus far in 1986.

Currency swaps actually preceded interest-rate swaps, which didn't come along until 1981. Then it was the result of a rather complicated yen-for-dollar currency swap that Citibank arranged for Canadian and Irish investors. Citibank dreamed up an interest-rate swap arrangement when Japanese and Arab banks were seeking floating-rate debt in place of the fixed-rate bonds they had accumulated from the currency deal.

By 1982, Citibank had a team of a

low as two to three basis points. On a $10 million swap, a 10-basis-point spread would mean $10,000 in revenues annually for a bank, compared with a yearly $3,000 take on a three-point spread.

Still, Katherine MacWilliams, who heads First Chicago's swap team, said that "the return [on swaps] is reasonable, although not stellar. That's evidenced by the continued entrance into the market of new players."

Donald Layton, a senior managing director in the investment banking sector at Manufacturers Hanover Corp., agreed that at the moment plain vanilla swaps are marginally profitable.

"You can still make money on plain vanillas, but is it enough money to justify the implicit capital that is tied up? And it's not clear just what that capital is," Mr. Layton said.

Bankers Say Risk Is Included in Price

Despite the weakening bid/offer spreads and the increase in volume, most bankers say publicly that they are pricing adequately for risk. "We certainly are not chasers of volume at the expense of return on risk," said Yves de Balmann, a Citibank vice president. "We have determined risk parameters and guidelines for return on capital.

"We'll lose a transaction if it does not generate enough return on capital," Mr. de Balmann added.

Banks have come to terms with these dwindling profits in a number of ways. They are finding that they can earn more on individual transactions that involve special features, such as a call option or a warrant to hedge a customer's interest rate risk.

Some banks, also, are making money on swaps by tying them to other products such as Eurobonds sold overseas. The great bulk of revenues from the swap business still comes from the sheer volume generated by the plain vanilla deals.

The dramatic decline in interest rates over the past few months also has changed the nature of the swap business as the all-in, or net cost to the customer, has decreased. Treasury bond rates, which are the basis for swap quotes, have declined by 200 to 250 basis points in the last six months, a boon to clients.

However, the other side of the pricing equation, which is quoted as a spread over Treasury bond quotes, has widened significantly as the demand for clients to receive the fixed side of the deal has increased.

The swap market, essentially, is driven by what is going on in the Euromarkets. In fact, some industry observers have estimated that 50% to 75% of all of the fixed sides of swaps originated through bond issues. These would be corporate customers who have the ability to tap the fixed-rate markets, but are really in search of even cheaper floating-rate debt. Thus, as the underlying spreads in the cash market change, swap spreads follow.

In the first quarter this year swap spreads increased sharply, said Joseph Bauman, who heads the swap desk at Chemical Bank in New York. What that means is customers were willing to pay more to lock in a fixed-rate debt payment at these attractive interest rate levels.

The spread of Treasury securities that is quoted in a swap deal reflects basic supply and demand economics and competition in the marketplace. It also includes the bank's fee for putting the deal together and the bank's perception of adequate coverage for the risk exposure.

Rate Cut Sparked Corporate Swaps

The drop in Treasury rates since the beginning of the year has been the motivation for a number of corporations to take part in a swap that would secure the payment at a relatively low, long-term rate. Thus, the demand to be fixed-rate payers in a swap pushed up spreads in order to induce the suppliers of the fixed side to take part in the swap.

"About three months ago, spreads were trading in the area of 40 to 60 basis points," said Mr. Bauman. "More recently, spreads have been quoted at 80 to 100 basis points over [Treasury's quote], or 80 to 110 basis points over depending on credit quality."

Thus, for people who are just getting into swaps now, as long-term interest rates have dropped to 8%, some pretty good deals have been secured. But how about investors who booked swaps a year ago, when interest rates were closer to 12% or 13%?

Kim Chandler, a swap specialist with the Bankers Trust Co., said this drop in interest rates has helped to promote the development of a secondary market in swaps.

For example, last January, Company A booked a seven-year swap in which it was the fixed-rate payer at 10.5%. Today, interest rates are 8%, so Company A is in a losing position.

In order to get Company A out of that dilemma, Bankers Trust might be willing to pay the company a "certain amount of cash to get out of the January swap and put one on at 8%," Ms. Chandler said. "Even with the cash payment, it would still give the customer an advantage."

In this case, rather than requiring the up-front payment in one lump sum, the banker would be willing to let the payment be amortized over the life of the second swap. What has happened in the meantime is that the amount of money necessary for unwinding a swap has increased dramatically.

"Last year, payments in the secondary market were in the neighborhood of $500,000 or $1 million," Ms. Chandler said. "Now, somebody with an 11% or 12% swap will have to pay $10 million or $15 million to get out of the swap."

— Lisabeth Weiner

MoneyMaker Electronic Transfer Firm Says Sweepstakes Will Boost ATM Usage

By DON MUNRO

NEW YORK — To increase usage of its off-premise automated teller machines, MoneyMaker EFT Services has kicked off another sweepstakes, its fourth since the network was established two years ago.

A three-way venture with KVIL-FM Radio in Dallas and Dallas-based Southland Corp. — owner of 7-Eleven convenience stores where MoneyMaker operates about 650 ATMs — MoneyMaker is offering participants 100 $1,000 prizes if their numbered ATM transaction tickets match those called over KVIL-FM airwaves. A grand prize of $50,000 will be paid out when the contest ends Sept. 1.

MoneyMaker, a subsidiary of the $2.4 billion-deposit First Texas Savings Association, Dallas, has 22 member institutions, including Gibraltar Savings Association, which it acquired in 1984. About 140,000 cardholders are registered to use its network of 775 ATMs.

Promotions like the KVIL sweepstakes, MoneyMaker said, increase usage during the game period and after. For example, the company said ATM usage increased by 30% in the Dallas market during the May run of "the Sure Thing," a 7-Eleven ATM contest often resurrected by the network. Sure Thing awarded ATM users prizes like cups of coffee or soda, $5, $10, $100, or $1,000.

MoneyMaker estimates that as of its latest monthly transaction report, 50% to 65% of Sure Thing players are still using the 7-Eleven ATMs.

The style in which MoneyMaker conducts its contests has earned the grudging respect of one of its strongest competitors, MTech Corp., the data processing subsidiary of MCorp, Dallas.

"They're smart marketers," said Bob Heckman, executive vice president of marketing for MTech, which runs MPact, another Texas shared ATM network.

Mr. Heckman, who said he would like nothing better than "to put a sign up in [MoneyMaker's] window saying, 'Don't use MoneyMaker ATMs, use ours,' " but acknowledged, nonetheless, that "they have a very aggressive stance, and we take our hats off to them."

Similar, but Not as Successful

MTech itself runs contests similar to the Sure Thing, but without the success MoneyMaker claims. According to Mr. Heckman, a sweepstakes dubbed "MPact Madness" conducted throughout Texas last summer by MTech resulted in a 21% rise in usage at its 300 ATMs located in Safeway supermarkets. Mr. Heckman said the game offered players "basic things" like free ice cream cones and hamburgers. This year, he said, he'll wait for ATM players "to get all warmed up" with MoneyMaker's game, and then "[MTech] will come in with a killer program, maybe offering people their son's weight in gold."

MoneyMaker expects about five million players to take part in its game. However, the network is unsure about how this sweepstakes will increase transactions, because unprogrammed cards can be used for the game, MoneyMaker spokeswoman Patricia Norvelle said.

"Not everyone is completing a bank transaction, so it's a little hard to tell," she said.

KVIL listeners can use any debit card or major credit card — including those that have not been programmed for acceptance in the network. For those unprogrammed cards, like Visa, MasterCard, and American Express, players need only input zero after inserting their cards to get an eight-digit contest number.

In this contest, the overhead costs are split three ways with the radio station and Southland, so the network will only spend about $300,000 on the whole contest — including the prize money. Still, Mr. Heckman of MTech said the frequency in which MoneyMaker engages in such programs means "somebody has a lot of money, because they're expensive."

To MoneyMaker, however, the potential benefits outshine expenses. President Scott Engle said the contest is aimed at getting people "to pull the debit piece of plastic out of their pockets and try it in the machine. Once they get over that initial fear of the ATM they like using them because they're convenient."

Ms. Norvelle said the contest will make users aware of other services ATMs can provide.

"We have the capability to design programs like travel and entertainment ticket dispensing, so it makes the box a little bit more attractive to member financial institutions. We're looking into establishing utility payment systems."

Added Mr. Heckman of MTech: "It helps the whole marketplace because it gives greater awareness."

Another reason bankers push electronic banking with contests is to increase fee volume. MoneyMaker, like its competitors, charges customers from nonaffiliate banks a fee to make transactions. The fees run from 30 cents per transaction to 65 cents per transaction.

Contests are also a critical step in helping MoneyMaker reach its break-even point. Mr. Engle of MoneyMaker said that with 3,500 monthly transactions per machine, "you will have enough revenue to cover costs." So the break-even point for MoneyMaker's 7-Eleven ATMs is 2.3 million monthly transactions. He would not elaborate on the break-even point for the rest of the network. However, MoneyMaker only does about 2.1 million transactions per month on all of its 775 machines.

In 1985, the network estimated it needed 3.2 million transactions from its ATMs just to break even. ■

Court Agrees to Speed Handling of Getty Case

WASHINGTON — Gordon P. Getty's efforts to acquire National Permanent Bank here received a new lease on life last week when a federal appeals court agreed to speed up consideration of the oil heir's challenge to a regulator's decision awarding the failing local thrift to Citicorp.

Mr. Getty contends that under the Federal Savings and Loan Insurance Corp. guidelines he must be treated as a local institution and therefore is entitled to preferential treatment over New York-based Citicorp under the 1982 Garn-St Germain Act.

Although the U.S. Circuit Court of Appeals initially refused to expedite handling of the suit, Mr. Getty's lawyer, Roger W. Mehle, asked the court to reconsider after learning that the Federal Reserve Board planned to rule on Citicorp's application this week. ■

dozen people, who were clearly a force in getting the interest-rate swap business off the ground. Today, Citibank employs 25 swap specialists in North America and 40 to 50 worldwide.

The growth of the swap business has been enormous in the last three years, to the point where it is now frequently referred to as a commodity rather than a creative financing instrument. Thanks to the ability that most commercial banks have of being able to act as a principal and warehouse their swap positions, straightforward plain vanilla swaps can be executed in minutes, despite the fact that customers may be at opposite ends of the world. The more complicated swaps, with any number of special features and caveats, make up a small minority of the total swap business, although this is where the largest profits can be made.

Why Banks Get The Edge in Swaps

How have commercial banks managed to move ahead in such fiercely competitive business? The answer is in a three-pronged advantage commercial banks have over their investment banking rivals

- Banks maintain a strong presence in the foreign exchange markets — a necessary tie between interest-rate and currency swaps.
- Most benefit from extensive global networks, giving the banks access to an unlimited supply of swap customers, or counterparties.
- Commercial banks, by their nature, possess the ability to stand in the middle and act as principal in a transaction.

It is this third characteristic that most bankers would agree gives commercial banks the edge in the swap business.

"Investment banks don't have a level of unsecured creditworthiness," said Mr. Layton of Manufacturers Hanover. While some investment banks, such as Salomon Brothers, do stand in the middle of swap deals, others, such as Goldman Sachs & Co., act only as broker — bringing the two counterparties together but never acting as principal.

A commercial bank can act as an intermediary by taking a role as a principal, assuming the credit risk in a deal and covering itself by hedging in the cash market.

Commercial banks present the image of institutions that are going to be around for a long time, an image that smaller investment banks have not established. "Is the investment bank still going to be around in seven years [when a deal matures]?" one commercial banker said. A commercial bank, on the other hand, is backed by a huge balance sheet and a large capital base.

"The size of our capital base is important in our ability to particiate as a major dealer" in swaps, said Yves de Balmann, vice president of Citibank. Even with 50 swap specialists worldwide, "we sell [swap products] throughout the pulse of our organization."

"This ability to intermediate is a value added in the world of swaps," said Katherine MacWilliams, who heads the swap desk in Chicago for First National Bank of Chicago. In addition, she said, commercial banks have a long history of assessing the credit of their counterparties, a necessary ingredient in pricing some deals.

However, investment banks have one key advantage that the commercial banks lack, the legal authority to underwrite corporate bonds domestically and internationally. The Glass-Steagall Act prohibits commercial banks from underwriting corporate securities in the United States.

That advantage has become more noticable in the last 18 months, as many companies have issued bonds and attached a swap to reduce the debt cost, in what investment bankers call side-by-side products.

The ability to offer bonds, however, may not be enough to overcome the creditworthiness advantage offered by commercial banks, Mr. Layton of Manufactures Hanover said. "Risk is an important issue. Nothing dramatic could happen that would put [commercial] banks out of business."

The third part of this five-part series tomorrow will examine commercial banks as managers of tax-exempt financings. ■

AN AMERICAN BANKER SPECIAL REPORT

Bankers Trust First in Tax-Exempt Financings

Glass-Steagall Thwarts Move into Revenue Bonds

By ANDREW ALBERT

NEW YORK — Bankers Trust Co., specializing in small industrial development deals, handled more tax-exempt financings than any other commercial bank operating in the highly restrictive public finance arena last year.

THE NEW INVESTMENT BANKERS
THIRD OF A SERIES

Behind New York-based Bankers Trust in the top tier of bank underwriters were second-place Morgan Guaranty Trust Co., New York, and No. 3 Citibank. Carving separate niches in the market, the trio handled $11.3 billion in tax-exempt issues in 1985, more than the combined volume of the next seven leading bank underwriters.

The results were gleaned from the *American Banker's* first investment banking survey, in which this newspaper ranked commercial banks by their involvement in five businesses traditionally associated with Wall Street firms.

What banks will do if they are allowed to underwrite municipal revenue bonds
Page 14

Today's ranking of bank underwriters in public finance was compiled by McDonnell Douglas Corp., of St. Louis, which uses municipal finance statistics provided by the data base of the Public Securities Association, a trade group.

McDonnell Douglas ranked the largest banks by their underwriting volume in all tax-exempt securities, both short-

Why Banks Bother with Public Finance, And How the Big Three Are Succeeding

NEW YORK — Since the Depression, commercial banks serving state and municipal borrowers have been forced to operate with one hand tied behind their backs. Congress barred them 52 years ago from underwriting the most lucrative of all tax-exempt securities: municipal revenue bonds.

As a result, volume and profit generated by bank underwriters are dwarfed by those of the unrestricted Wall Street firms.

"We are a minuscule part of the bank's bottom line," said Richard M. Gerwitz, senior vice president in charge of public finance at Los Angeles-based Security Pacific National Bank. His statement could apply to any of the nation's largest banks.

Yet, even with those obstacles, none of the giant money centers is willing to do without a public finance unit and the hidden benefits that might go along with it. After all, imagine being in the place of a chief executive at a major U.S. bank, and consider:

Regulations Keep Banks Out of Lucrative Revenue Bond Market

Continued from Page 1

and long-term. Figures include competitive and negotiated underwritings as well as tax-exempt private placements. To produce the ranking, par value of each issue was divided equally among senior managers and comanagers.

While identifying the bank leaders in public finance, the volume figures also reflect the great distance banks have to go to compete with their brethren from Wall Street. The numbers illustrate the shackling effects of the 1933 Glass-Steagall Act, which renders most municipal revenue bonds off limits to bank underwriters.

Merrill Lynch & Co., a securities firm unfettered by such laws, was the overall leader in this underwriting category. Handling mostly revenue bonds, it helped underwrite $16 billion in tax-exempt securities — considerably more than the combined volume of the three leading banks in the business.

Municipal revenue bonds are typically issued by state and local governments to finance corporate undertakings such as the construction of health care, pollution control, and public power facilities. Interest payments are tied to revenues from those projects.

Revenue bonds are considered the most lucrative for underwriters because they are often so large in dollar terms; and issuers generally negotiate the terms with a single book manager or a group of comanagers, rather than soliciting competitive bids from a large group of underwriters, as is customary with other debt offerings.

Bankers Trust, Citibank, and Morgan Guaranty have each formally requested permission from the Federal Reserve Board to underwrite revenue bonds and other "ineligible" securities. As reported in June, sources expect the Fed to rule in favor of the banks later this year. And next week, the Senate Banking Committee is scheduled to draft a bill, introduced by Sen. Jake Garn, R-Utah, the committee's chairman, that would authorize banks to underwrite revenue bonds and engage in other securities activities.

As underwriters, institutions risk their own capital by acquiring the obligations from an issuer and immediately selling them to investors, presumably at a profitable spread.

Congress has made a few exceptions over the years, giving banks limited authority to underwrite revenue bonds for housing projects and universities, areas where finances once threatened to dry up.

"The difference between a housing deal and a [public] power deal is zero," said Dick Stuart, head of Citibank's municipal finance division. "That's one of the travesties of Glass-Steagall."

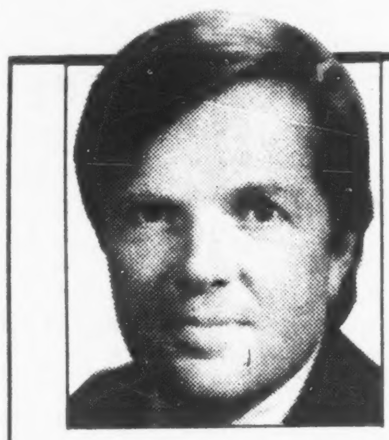
Nevertheless, the law has endured. Banks must avoid underwritings of so-called "ineligible" securities and instead distribute them through private placements — where securities are placed with a small group of professional investors rather than through a public offering.

In underwritings, financial institutions risk their own capital by acquiring securities from an issuer and later selling them — presumably at a profit — to investors. Banks can avoid such risks in private placements by requiring purchase commitments from professional investors before issuing the securities.

Bankers Trust's public finance unit, which has excelled as an agent in such private placements, acted as lead manager or comanager in 403 tax-exempt issues worth $4 billion in 1985. Though it ranked first among commercial banks, Bankers Trust was No. 14 among all financial institutions — handling only a quarter of Merrill Lynch's volume.

Morgan Guaranty, which established itself as a leader in higher education finance in 1985, underwrote $3.8 billion in 230 tax-exempt deals. It was ranked second among banks in 1985 and 15th among all financial institutions.

Citibank flexed its muscle in competitive underwritings and also specialized in designing tax-exempt financings accompanied by innovative credit enhancements and risk management devices, known in investment banking circles as "bells and whistles." With that expertise, the nation's largest bank handled 287 issues worth $3.5 billion. The commercial bank behemoth placed third among banks in tax-exempt financings, and it was 16th when counting in securities firms.



Fee income 'doesn't come in steadily, but it comes in big bites.'

— Park Benjamin
Manufacturer's Hanover Trust Co.

In the first half of 1986, Citibank led all banks in overall tax-exempt underwritings and moved up to 12th in the overall, the latest rankings published by the Public Securities Association showed. Morgan Guaranty remained No. 2 among banks and 15th overall. Bankers Trust fell two notches to third place within the commercial banking group and to No. 19 among all underwriters in the first six months of 1986.

Hundreds of other U.S. banks maintain public finance units primarily to serve government borrowers in their own regions, but only the 10 leading bank underwriters handled at least $1 billion in tax-exempt deals. Following is a brief look at some of those top 10 banks:

CHEMICAL BANK — No. 4

Entering the state and municipal finance field four years ago with just two professionals, Chemical focused on underwriting issues for multifamily housing projects, student loan operations, and health care facilities — areas where the bank's lenders had already developed expertise. Headed by managing director Herman R. Charbonneau, the public finance unit now employs 30 professionals and has developed skills to distribute sophisticated debt instruments, such as variable-rate demand bonds.

"I just want to be within the top 10 in every market sector we go after and get the profitability that goes along with that ranking," Mr. Charbonneau said.

Chemical Bank ranked 23d among all underwriters in 1985. He said his unit is intent on building its reputation in underwritings where the bank negotiates directly with an issuer rather than competing for the business with other underwriters. He said Chemical "is not in the position" to battle with Bankers Trust, Morgan, or Citibank for competitive underwritings.

CHASE MANHATTAN — No. 5

Typical of a big commercial bank, Chase Manhattan Bank's strength in public finance lies in its ability to bid competitively on general obligation issues — those backed by the full credit and taxing power of a state or local government. Since 1980, the bank has been attempting to position itself as a strong player in negotiated finance — particularly in student loan and higher education deals.

'If you can handle an industrial revenue bond and place it successfully, it lends itself to other pieces of bank business.'

— Philip L. Toia, Chase Manhattan Bank

AN AMERICAN BANKER SPECIAL REPORT

Big Three in Public Financing

Continued from Page 1

mercial bank is serious about mastering the fee-intensive investment banking business?

- Why miss out on an opportunity to raise cheap funds for the same state and local governments that could prove to be important allies on some future matter?
- While full-fledged interstate banking may be years off, why not gain footholds in all 50 states and hundreds of municipalities by helping to sell their bonds?

"Public finance gets to wave Citibank's flag [across the country]," said Dick Stuart, head of the municipal finance division at Citibank. "We're active in 10,000 of the 80,000 political subdivisions in the United States. And with everyone anticipating nationwide banking, the fact that we've done business with so many [out-of-state] people can't hurt."

'We're active in 10,000 of the 80,000 political subdivisions in the United States. And with everyone anticipating nationwide banking, the fact that we've done business with so many [out-of-state] people can't hurt.'

— Dick Stuart, Citibank

Hundreds of large and medium-size banks have built public finance operations in the last 10 years, but Citibank, Bankers Trust Co., and Morgan Guaranty Trust Co. of New York represent the industry's most serious contenders in the field. Each of the Big Three has carved out distinct target markets, where they can do battle most effectively with Wall Street.

"We weren't going to come into this market [in 1980] and compete with Goldman, Sachs [& Co.]," said David G. Bailey, senior vice president in charge of public finance for Bankers Trust since February 1985.

Bankers Trust, during its six years in the public finance business, has specialized in acting as the lone manager for a variety of small, corporate-related financings. That strategy proved instrumental in allowing Bankers Trust to handle more tax-exempt issues — in dollar terms — than any other commercial bank in 1985.

The *American Banker's* annual investment banking survey showed that Bankers Trust handled 403 tax-exempt issues worth $4 billion in '85.

"We did a tremendous amount of business in which we were sole manager or sole placement agent," Mr. Bailey said.

In these unassisted deals, the bank usually served issuers by distributing industrial development bonds through private placements. Banks are forbidden by law from underwriting most revenue bonds but are free to place them privately with a small number of investors. Private placements, which do not require a bank to risk its own capital, as in an underwriting, represented about 20% of the tax-exempt financings handled by Bankers Trust in 1985.

Industrial Business Rolls In

Much of the development bond business at Bankers Trust rolls in naturally from corporate relationships with other parts of the bank, Mr. Bailey said. "We won't actively seek [industrial development bonds] because the issue size is relatively small" — less than $5 million per issue last year, he said.

Typically, development bonds are issued by a municipality to finance construction for a private corporation. The resulting plant usually is leased to the corporation at a rate sufficient to pay off the tax-exempt bonds; the bond is backed by the corporation's credit and not the municipality's.

Bankers Trust has been busily peddling its variable-rate demand bonds — a flexible financing tool that Bankers Trust takes credit for inventing in 1981. Since then, several other banks and securities firms have become skilled at these financings, largely because of their attractiveness to both investors and issuers.

These medium-to-long-term securities give investors the option to "put back," or demand payment for the bonds, usually upon seven days' notice at an interest rate that is adjusted weekly. Banks often employ letters of credit or revolving credit arrangements to ensure that funds will be available to repurchase the bonds.

In its largest 1985 deal, Bankers Trust acted as one of four comanagers underwriting $250 million in variable-rate bonds issued by the Harris County government in Texas to finance the construction of toll roads.

At Bankers Trust, 1985 was dominated by variable-rate financings, though most were considerably smaller than the Harris County deal. Of the bank's 255 negotiated underwritings last year, roughly 225 issues — worth about $3.9 billion — involved variable-rate paper. In negotiated underwritings, issuers generally work out the terms of a deal with a single book manager or a group of comanagers, rather than soliciting bids from financial institutions, as is the practice in competitive underwritings.

"These [small, variable-rate financings] were not as profitable per deal, but they turned out to be fairly profitable overall because of the volume we were doing," Mr. Bailey said. "We were able to make a name for ourselves in that market."

Public finance generated $31.3 million in revenues for Bankers Trust in 1985, making it the bank's biggest money-maker of the five investment banking businesses examined by the *American Banker.*

High Marks in Education Finance

Morgan Guaranty's strengths lie elsewhere. Few underwriters matched Morgan's volume in handling bond issues for colleges, universities, and teaching hospitals.

Morgan officials are quick to cite figures compiled by the Securities Data Co., a New York-based information firm, ranking the bank the No. 1 lead manager in note and bond issues for colleges and universities.

"We can go head to head with the investment banks [in the higher education field] and come out as the book-running manager," said Arthur J. Kalita, vice president in charge of Morgan's public finance department.

Last fall, for example, Morgan acted as senior manager in bond issues worth a combined $500 million for the University of Texas System and the Texas A&M University System. The two separate issues, designed to substitute outstanding bonds with new obligations

Big Three: Page 14 ➼

Bankers Trust No. 1 in Tax-Exempt Issues

Continued from Page 11

lic finance, also sees great value in generating corporate-related business through tax-exempt private placements.

"If you can handle an industrial revenue bond and place it successfully, it lends itself to other pieces of bank business," he said.

MANUFACTURERS — No. 6

"Three years ago, we were zip," said Park Benjamin. Today, the proud senior vice president oversees Manufacturers Hanover Trust Co.'s 35 public finance professionals and 45 specialists on the dealer side.

Since he joined the bank in January 1982, it has developed capabilities in most tax-exempt financing activities open to commercial banks. And, as with many banks, Manufacturers seeks to distribute ineligible securities through private placements. The bank also acts as financial adviser to issuers of ineligible securities.

Late in 1985, Manufacturers joined Smith Barney, Harris Upham & Co. as colead manager in a $500 million refunding issue for Puerto Rico. "That says to me that we in large measure have achieved what we started out to achieve," Mr. Benjamin said. He acknowledged that his unit's profits remain minuscule compared to the bank's overall income.

Noting the volatility of the business, he said the fee income "doesn't come in steadily, but it comes in big bites."

FIRST CHICAGO — No. 7

Among the strongest municipal finance players in the state of Illinois, the First National Bank of Chicago has recently built a name for itself as a financial adviser to municipalities issuing securities that are ineligible to bank underwriters.

"Financial advisory assignments are not as profitable [as underwriting], but they carry no risk," said John Gilchrist, senior vice president and manager of First Chicago's public finance division. He's quick to point out that the bank handled 10 such assignments in 1985, though none appear in the Public Securities Association ranking.

After failing to achieve strong results with the bank's own personnel at the helm, First Chicago in September 1985 hired Mr. Gilchrist, a public finance veteran of the former A.G. Becker Paribas Inc. and later New York-based Drexel Burnham Lambert Inc., to head the unit. With 12 professionals, the bank boasts the second largest public finance staff in Illinois, second only to John Nuveen & Co., Chicago.

'I just want to be within the top 10 in every market sector we go after and get the profitability that goes along with that ranking.'

— Herman R. Charbonneau
Chemical Bank

Under Mr. Gilchrist's leadership, the bank has become a leading investment banker for county and state agencies in Illinois. Among its biggest deals last year: lead managing a $233 million offering of refunding bonds to restructure the outstanding debt of the Chicago's Metropolitan Sanitary District, a sewer and water treatment agency. The bank completed another $133 million offering for the agency in June.

BANK OF AMERICA — No. 8

Like their colleagues in most other areas of the bank, officials in Bank of America's public finance unit are reassessing their strategy. Downplaying its relatively low ranking as a national underwriter, the bank's public finance section is "reemphasizing" its strength

Despite legal restrictions, hundreds of small and medium-size banks help underwrite state and municipal bonds in their regions. For many banks, public finance represents their only true investment banking function. Many have in recent years expanded their underwriting staffs, which create securities, and their dealer operations, which distribute and trade them. The above table shows what might be termed the second tier of bank underwriters — those 20 institutions that rank below the top 10 and handled less than $1 billion in tax-exempt financings last year.

First Oklahoma . . .

➳ Continued from Page 7

First Interstate will be well positioned to take advantage of the change. And First Interstate isn't going into the oil patch without experience in the energy business. The banking company owns franchise banks in the Rocky Mountain region, where energy lending is done.

Moreover, anaylsts who gave a quick reading of the deal between First Interstate and the Federal Deposit Insurance Corp. to acquire First National say the Los Angeles banking company won some attractive concessions.

First Interstate will assume about $1.5 billion in deposit accounts and other liabilities and will purchase about $1.2 billion of the failed bank's assets.

The FDIC is paying First Interstate $72 million cash to take over First National, although the agency's final cost may be considerably higher. The FDIC also will provide financing of $300 million to First Interstate to cover the excess of liabilities being acquired over assets. For its part, the FDIC will take an equity position in the bank in the form of special preferred stock with dividends based on the Oklahoma bank's future operating results.

Regulatory acceptance of First Interstate's bid for First National ended months of sometimes near frantic efforts to find a way to recapitalize the bank and its parent company in the amount of $40 million. Mr. Cairns, the immediate past president of the American Bankers Association, worked since January when he arrived at First National to cuts expense and find ways of raising the much needed capital.

Twice the Comptroller of the Currency extended First National's deadline for coming up with an acceptable plan to boost capital to the minimum levels. The final deadline was to have been Aug. 16, and Mr. Cairns promised to meet it.

But First National's plan calling for a substantial amount of federal assistance wasn't accepted, Mr. Cairns said Tuesday morning.

At the same time, federal regulators were under the gun to meet the midnight Monday deadline of the law allowing out-of-state bank holding companies to acquire failed banks in other states. Federal regulators said the federal law was somewhat more "flexible" than an Oklahoma law passed earlier this year that was designed to help find buyers for failed and failing Oklahoma banks.

The Oklahoma law limits expansion within Oklahoma of any out-of-state bank that acquires a failed or failing bank. Specifically, the acquiring bank could not expand within Oklahoma unless the home state of the acquiring bank allowed reciprocal rights to Oklahoma banks, or after four years. Under the now expired federal law, First Interstate will have in Oklahoma the same branching privileges available to national banks.

By using the federal law, regulators also sidestepped provisions in the Oklahoma law that call for a two-tiered bidding process that allow Oklahoma banks, in a second round of bidding, to match any bid made by an out-of-state bank. The federal law simply stipulates that a preference be given to bids made by an in-state institution.

Meanwhile, members of Oklahoma's congressional delegation were generally favorable in their reaction to the out-of-state takeover.

Sen. David Boren, a Democrat who was critical of the FDIC's handling of the Penn Square failure, said through an aide that his primary concerns were that the bank's depositors be protected and that the bulk of the bank's problem loans be contracted back to banks within the state, rather than held by the FDIC, which might deal more harshly with delinquent borrowers.

The takeover assured that no depositors would lose money and $300 million of the bank's $412 million in loans retained by the FDIC were assigned to the Oklahoma City bank as collection agent, the staff aide said.

Sen. Don Nickles, a Republican, also said he was pleased that the bank had been merged.

Both Senators said since last week they had been in contact with FDIC Chairman William Seidman and Comptroller of the Currency Robert Clarke.

U.S. Rep. Doug Barnard, D-Ga., lamented the expiration of the Garn-St Germain emergency takeover provisions, and said an extension should be considered immediately.

"What happens tomorrow if we have another emergency like this," said Mr. Barnard, a member of the Banking Committee. "It will be most unpleasant and expensive."

Tuesday morning, the lobby of the former First National seemed relatively calm. A few customers stood in line in the cathedral-like room, "and are depositing money," Mr. Cairns said to reporters.

The situation began to unfold Monday evening when the bank at 6 p.m. announced a press conference to start at 7:30 p.m. Mr. Cairns then announced the bank's closing and transferral to First Interstate.

Mr. Cairns met with employees of the bank before the press conference. While he spoke, state police and FDIC personnel filed into the bank lobby, according to local press reports.

The FDIC announced its role in the bank closing about an hour later — a source of some concern, said an FDIC spokesman on the scene in Oklahoma City.

"We usually try to time the announced closing and transferral of assets at the same time," he said.

Mr. Cairns, though, apparently "was excited and wanted to get the announcement on the evening news," said the spokesman.

The FDIC was delayed as it awaited a technical go-ahead from a federal court judge in Oklahoma City, he said.

Mr. Cairns on Tuesday said the only planned change for the bank was the relocation of one of its two new branches, which comprised the former Oklahoma National Bank, Oklahoma City. Oklahoma National was merged into the new First Interstate Bank of Oklahoma City as part of the restructuring.

First Interstate . . .

➳ Continued from Back Page

profits in 1985, thanks partly to improved net interest margins and continued efforts to control costs.

First Interstate has higher operating costs than many of its peers because of its extensive retail banking network, said Mr. Pinola. He noted, however, that First Interstate also enjoys higher margins due, in part, to a higher volume of interest-free demand deposits.

"Part of their strategy is to consolidate their position in individual markets to improve economies of scale and reduce their expense ratio," observed Donald K. Crowley, senior vice president at Keefe, Bruyette & Woods Inc., San Francisco. He gives high marks to Mr. Pinola and First Interstate's management, which has been substantially restructured this year, both at the holding company and several of its banks.

Mr. Crowley thinks First Interstate's future is bright. He thinks the banks' uniform identity — all sport the First Interstate name — also will help to maintain and improve market shares.

First Interstate's franchising team will help integrate the former First Oklahoma into the First Interstate network, Mr. Pinola said.

The new First Interstate Bank of Oklahoma will be operated autonomously, as are other First Interstate banks, Mr. Pinola said. He added, however, that "our management out in the field is very much aware of the value of common product and common purchasing [and] we are aware of their individual needs consistent with their market."

At a Glance

First Interstate Bank
As of December 31, 1985

Net Income	$313 million
Return on Assets	0.67%
Return on Equity	13.11%
Total Assets	$49.0 billion
Total Deposits	$35.6 billion
Total Loans	$33.6 billion
Total Equity	$2.5 billion
Member Banks	22
Total Offices	987
Number of Employees	34,303

That includes pricing strategy.

But First Interstate won't "buy business" in Oklahoma, said Mr. Pinola.

"I don't think we will exercise that option here. We just hope to represent ourselves in a very sound financial posture. We are going to bring to the State of Oklahoma products and services that other Oklahoma banks, for various reasons, can't provide." That includes the ability to conduct business at affiliated banks in surrounding states and providing wholesale banking services, he says.

Mr. Pinola likens First Interstate to a ice cream store faced with increased competition on the same street corner. In order to succeed, First Interstate, like the ice cream store, must offer a wider array of products.

"We're smart and we're aggressive," Mr. Pinola concluded. ■

Tax-Exempt . . .

➳ Continued from Page 12

on the West Coast. Said Peter Zachary, an associate in the bank's public finance department, "We are a major player west of the Mississippi."

Bank of America executives are quick to cite figures compiled by Securities Data Co., a financial information firm, showing that the bank ranked second only to Merrill Lynch & Co. among underwriters of tax-exempt issues in Western states. In California, the bank identifies itself as the state's leading underwriter of general obligation bonds sold competitively. In the first half of 1986, it advanced to sixth place among banks and No. 23 overall in the Public Securities Association rankings.

SECURITY PACIFIC — No. 9

Unlike Bank of America, Los Angeles-based Security Pacific National Bank's public finance section is attempting to shed its reputation as a West Coast regional underwriter. Richard M. Gerwitz, senior vice president in charge of public finance, insists the bank has the track record (and the New York office) needed for a national image.

The unit's forte was financing multifamily housing projects, handling 45 such issues last year. Its largest housing deal in 1985 was the financing of a $35 million apartment project for the city of Freemont, Calif. Security Pacific in that deal underwrote 10-year, variable-rate revenue bonds backed by a letter of credit to assure their payment. A large portion of its 1985 deals were attributable to corporate-related private placements worth less than $5 million each.

Security Pacific's professional staff quadrupled to 28 from the seven employees that it had when it started in 1983, but that did not prevent the bank from slipping in the rankings in the first half this year to No. 11 among banks.

FIRST BOSTON — No. 10

"New England is our backyard," said John S. Ingalls, managing director of public finance at First National Bank of Boston, emphasizing the bank's renewed regional strategy. With affiliate banks in Maine, Rhode Island, and Connecticut, the Boston institution has become the largest underwriter of general obligations in New England.

Satellite banks handle traditional general obligations in their own states, while 25 public finance professionals at the First Boston focus on the more lucrative deals: larger general obligations and eligible revenue bonds. Specializing in single family and multifamily housing bonds, the public finance unit relies regularly on business tips from the bank's real estate lending group.

Because of its proven ability to distribute securities in the region, First Boston participates in a national underwriting syndicate with Merrill Lynch & Co. and Salomon Brothers Inc. and several other securities firms. First Boston's volume figures also reflect its role as comanager with Salomon Brothers for the tax-exempt commercial paper issued by the Commonwealth of Massachusetts. Mr. Ingalls said of his unit: "It's another arrow in our quiver of banking services, that's the way I look at it."

On Thursday, the fourth part of this five-part series will examine commercial banks as middlemen in private placements of securities.

FDIC Accepts Costly Deal for Oklahoma's Failed First National

By NINA EASTON

WASHINGTON — The Federal Deposit Insurance Corp. agreed to an unusual and expensive assistance package in First Interstate Bancorp's acquisition of First National Bank and Trust Co. of Oklahoma City after the agency failed to sell off the bank before closing it.

"There were negotiations to complete an open-bank transaction, but they did not work out," said Graham T. Northup, FDIC's director of congressional relations and corporate communications.

Oklahoma's law permits the FDIC to force the merger of failing banks before they become insolvent. The FDIC is seeking similar authority nationwide from Congress.

In contrast to FDIC rescues of large banks, First Oklahoma's holding company was not saved; its shareholders and creditors will suffer substantial losses because the holding company is the principal stockholder in the bank.

One of the new twists to the assistance package was a so-called "negative premium" of $72 million. Translated, that means that the FDIC is paying a premium to First Interstate to acquire the failed bank. Generally, acquirers pay a premium to the FDIC, although the agency in turn will financially assist the merger.

"This was a sign of how bad the situation was in that particular situation and that particular state," Mr. Northup said.

Industry officials predict the FDIC may use this "negative premium" to induce more buyers for other troubled oil patch banks in the future. But they note that the Texas market is more attractive than Oklahoma, and that troubled banks in that state may not need as many carrots.

In return for the $72 million, the FDIC took an equity position in the merged bank consisting of an issue of limited participating preferred stock. The FDIC rarely takes an equity position in the banks it rescues or sells off.

If fact, this has occurred only three times in FDIC history, agency officials said. In the 1980 rescue of First Pennsylvania Corp., the FDIC took out warrants convertible to common stock, and in the 1984 rescue of Continental Illinois National Bank & Trust Co. of Chicago, the agency took on $720 million in nonvoting preferred stock, which also was convertible.

In 1977, when the FDIC rescued the Farmers Bank of Delaware, it took over $2 million in preferred stock that the state had purchased, the FDIC said.

Because of a 1982 law, the FDIC may only take an equity position in a bank consisting of nonvoting stock. "By law, we cannot have a voting position," said Douglas H. Jones, FDIC deputy general counsel.

Under the terms of the preferred stock agreement in the First Oklahoma case, the FDIC shares half of any profits if the bank earns more than an 80-basis-point return on asset. However, agency officials are not optimistic that they will recoup much, if any, money through this transaction.

Industry officials noted that First Interstate could direct its earnings to avoid paying the dividends to the FDIC. That issue was raised in discussions between First Interstate and the FDIC, and agency officials said they were confident about the acquirer's intentions.

In addition, the FDIC has agreed to retain assets of the failed bank with a book value of about $418 million. First Interstate will service a portion of those loans under an agreement in which First Interstate is rewarded for good recovery rates.

Still, the insurance fund could suffer substantial losses from those assets. One industry official close to the transaction predicted the agency could lose as much as $280 million on the bad loans it took over from First Oklahoma.

However, the official said, "they did the best deal they could have done."

The FDIC wanted to complete the deal Monday, before the expiration of two provisions in federal law — specifically in the 1982 Garn-St Germain Act — that make possible interstate acquisitions of failed banks with more than $500 million in assets. However, Oklahoma state law also would have enabled the FDIC to complete the interstate deal.

The state law "is more complex and potentially more time intensive," Mr. Jones said.

However, Mr. Northup said the FDIC is not anxious to obtain an extension of the Garn-St Germain provisions. Instead, he said the agency hopes that the failure of First Oklahoma will prompt Congress to move quickly on proposed legislation to grant the regulators sweeping new authority to sell off failed and failing banks to out-of-state buyers.

"Maybe those guys will realize that we do need this legislation," Mr. Northup said. "There are a bunch of big ones out there with these kinds of problems." ■

The Largest Commercial Bank Failures

Here are the largest U.S. commercial bank failures ranked by asset size, of institutions larger than $500 million, according to the Federal Deposit Insurance Corp.

1. **Franklin National Bank, New York, NY.** Closed Oct. 8, 1974. Deposits $1.445 billion. Assets $3.656 billion. Deposit assumption by European American Bank & Trust Co., New York.
2. **First National Bank & Trust Co. of Oklahoma, Oklahoma City, Okla.** Closed July 14, 1986. Assets of $1.6 billion. Deposits $1.5 billion. Deposit assumption by First Interstate Bancorp, Los Angeles, Calif.
3. **First National Bank of Midland, Midland, Tex.** Closed Oct. 14, 1983. Assets $1.4 billion. Deposits and other liabilities approximately $574 million. Deposit assumption by RepublicBank First National Midland, Midland, Tex.
4. **United States National Bank, San Diego, Calif.** Closed Oct. 18, 1973. Assets $1.266 billion. Deposits $932 million. Deposit assumption by Crocker National Bank, San Francisco, Calif.
5. **United American Bank, Knoxville, Tenn.** Sold to First Tennessee Bank, Knoxville, Feb. 15, 1983. Assets $778 million. Deposits $585 million.
6. **Banco Credito y Ahorro Ponce, Ponce, Puerto Rico.** Closed March 31, 1978. Assets $713 million. Deposits $608 million. Reopened under two banks: Banco de Santander of Spain and Banco Popular de Puerto Rico of San Juan.
7. **Park Bank of Florida, St. Petersburg, Fla.** Closed Feb. 14, 1986. Assets $593 million. Deposits $544 million. Sold to Chase Manhattan Corp., New York.
8. **Penn Square Bank NA, Oklahoma City, Okla.** Closed July 5, 1982. Assets $517 million. Deposits $470 million. Insured deposits assumed by FDIC-created Deposit Insurance National Bank of Oklahoma City.

Oil Bank Investors Calm, But Failure Of First Oklahoma May Spur Congress

By RICHARD RINGER

CHICAGO — The failure Monday of the First National Bank and Trust Company of Oklahoma City is likely to rejuvenate congressional efforts to permit federal bank regulators to arrange mergers for troubled banks before they are declared insolvent.

James G. Cairns

But the closing of the $1.6 billion-asset First National, the second largest bank to fail in U.S. history, has so far been calmly received in the Southwest.

First National, once the largest bank in Oklahoma and a symbol of stability and good management, was declared insolvent late Monday afternoon and then acquired by First Interstate Bancorp, Los Angeles. In closing First National, Comptroller of the Currency Robert Clarke said the bank had "severe liquidity problems. The bank became unable to meet its obligations to its creditors, necessitating that the bank be declared insolvent."

The bank reopened Tuesday as First Interstate Bank of Oklahoma City, a newly chartered subsidiary of First Interstate, the ninth largest bank holding company as of March 31, with total assets of $49 billion..

Although the emergency takeover authority included in the 1982 Garn-St Germain Act expired at midnight Monday, after regulators used it to act in the First National case, a congressional source said he expected an effort later this week to extend the provision.

Two other bills, the wide-ranging banking bill introduced by Senate Banking Committee chairman Jake Garn and the more limited "regulators' bill," introduced in the House by Banking Committee chairman Fernand J. St Germain, also authorize interstate takeovers of failing institutions.

The 1982 law permits regulators to arrange out-of-state takeovers for institutions with over $500 million in assets. The new Garn bill, by contrast, proposes to lower that threshold to $250 million.

At a press conference in the lobby of the bank Tuesday morning, James G. Cairns Jr. said he would remain as chairman and chief executive officer of the new First Interstate Bank of Oklahoma City.

Mr. Cairns said he resigned as chairman and chief executive officer of First Oklahoma Bancorporation Inc., the holding company of the former bank.

An interim board of directors on Monday evening assumed control of the new part of First Interstate Bancorp., said Mr. Cairns.

Mr. Cairns was hired in January to try to revive First National and its parent.

"Most people perceived the unusual weakness in First National," said Frank Anderson, a bank analyst with the Dallas-based Weber, Hall, Sale & Asso-

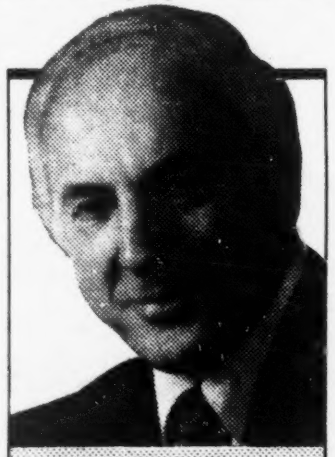
First Interstate Bets on Oil Rebound

By ROBERT LUKE

LOS ANGELES — First Interstate Bancorp sees opportunity in adversity in its purchase of the failed First National Bank and Trust Company of Oklahoma City.

"Oil can't stay very long at $10 to $11 a barrel," observed Joseph J. Pinola, First Interstate's chairman and chief executive officer, referring to Oklahoma's ravaged, energy-based economy and the current condition of its banks. "If you put together a sound financial institution in what shortly will be an economic recovery, you have a combination that makes economic sense," he added in an interview.



Joseph J. Pinola

First Interstate, with assets of nearly $49 billion at March 31, wants to transform itself into a nationwide provider of financial services, Mr. Pinola said. It plans to do this without incurring the dilution to earnings and heavy debt associated with many acquisitions today.

"We think banks [making acquisitions] will go through the same trials and tribulations we have gone though in previous years," said Mr. Pinola, predicting that the hefty premiums now being paid for many banks eventually will diminish.

When that occurs, Mr. Pinola added, First Interstate's acquisition program "will go on in a big way." Earlier this year, First Interstate expressed an interest in merging with BankAmerica Corp. but was rebuffed. It also may acquire thrifts.

"Certainly that's a possibility," said Mr. Pinola, who previously was an executive at the Bank of America, which was founded by A.P. Giannini.

Mr. Giannini — thwarted in his banking empire building when the 1927 McFadden Act barred interstate banking — in 1928 formed the bank holding company now known as First Interstate. When the Bank Holding Company Act became law in 1956, Mr. Giannini's 21 banks in 11 western states were grandfathered into existence as a unique franchise — the largest of seven multistate bank holding companies.

Today, Mr. Pinola is following in Mr. Giannini's footsteps. In his march from the West Coast eastward, he is granting franchises to healthy smaller banks and buying unhealthy banks that aid his strategy.

In 1983, for example, First Interstate purchased the troubled IntraWest Bank of Denver, a large energy lender. Analysts estimate that First Interstate's energy portfolio today totals about $1.1 billion. The majority of the loans are to large integrated oil companies.

Though problems in energy, agriculture, and real estate dampened earnings, particularly of its Rocky Mountain banks, First Interstate reported record

Citibank Unit Ranks First In '85; Raises $2.9 Billion

By ANDREW ALBERT

NEW YORK — Last summer, Tifco Inc., a firm that finances premium payments for big insurance customers, found itself in somewhat of a bind.

Seeking about $25 million to fuel its quick expansion, the company turned to its principal banker, Citibank, for help. Because the firm was already flush with senior bank debt, the bank advised Tifco to avoid the corporate loan route in order to leave itself with borrowing capacity for the future. Just a few years ago, corporations rarely heard that kind of talk from their commercial bankers, who had little interest in any financial puzzle that couldn't be solved with the old fixed-rate loan.

Today, however, the largest U.S. banks are far more willing to respond to corporate finance needs with a wide variety of remedies. New York-based Citibank accommodated Tifco by arranging a sale of securities through a private placement — a financing technique that is quickly becoming the most popular and most profitable alternative to the corporate loan.

BankAmerica Posts $640 Million Loss Because of Huge Loan-Loss Provision

By ROBERT LUKE

LOS ANGELES — BankAmerica Corp. said its losses widened to $640 million in the second quarter as a result of a whopping $988 million provision for loan losses.

The higher loss provision, blamed on deteriorating asset quality in the energy and commercial real estate sectors as well as problem loans to private Third World borrowers, has resulted in a net increase of $605 million in BankAmerica's loan-loss reserve since the end of the first quarter.

The $640 million loss, or $4.25 a share, compares to a loss of $338 million, or $2.34 a share, in the year-earlier quarter. For the first six months, BankAmerica lost $577 million, or $3.94 a share, against losses of $224 million, or $1.71 a share, a year earlier.

Bankers Trust Co. Earnings

Many Large Banks Expand Private Placement Businesses; Citibank No. 1 in '85

➻ **Continued from Back Page**

dling such financings.

Big banks are indeed handling more private placements than they have in years past but continue to lag far behind their Wall Street counterparts. And it doesn't require more than a quick glance at the rankings to conclude that the banks probably won't be in competition for the top spot any time soon.

Salomon Brothers Inc. led all managers of private placements last year, handling $10.6 billion in 169 issues. That gave Salomon a 14.4% share of the private market, exceeding the combined market shares of Citibank, Morgan Guaranty, Bankers Trust, and Bank of America, according to IDD.

'The fact of the matter is, we're trying to avoid making low-spread loans to hold onto.'

— Rob Lawrence
Vice President
Citibank

Once considered a bank's booby prize for failing to win a corporation's loan business, the private placement is now viewed by lending institutions as a valuable means of competing for hefty investment banking fees. On a typical $30 million private issue, a bank can collect a half of a percentage point fee, or about $150,000.

As heavy capital requirements shrink profit margins on commercial and industrial loans, private placements take on an added luster. Here's how a few bank managers explain it:

- Tom McGrath, vice president in charge of private placements at First Chicago: "Private placements do not use the bank's balance sheet at all. There is no commitment on the bank's part. It's a very pure fee-related business."
- Walter Bloomenthal, managing director running the private placement unit at Continental Illinois National Bank and Trust Co.: "The only risk associated with a private placement is the risk of spending a lot of time on a deal and not collecting anything [in the end]. But that's a helluva lot better than making a $1 million loan and not collecting on that."
- Michael Enthoven, a senior vice president who recently moved from Morgan Guaranty's London office to head the bank's private placement operation in New York: "Morgan views itself as a global securities firm. And this product fits very well with that strategy, carrying ever more importance to the bank."
- Mr. Lawrence of Citibank: "The fact of the matter is, we're trying to avoid making low-spread loans to hold onto."

If commercial banks are going to prove themselves as diversified corporate finance specialists, it will happen first with their private placement operations. With few exceptions, banks and securities firms have equal access to private placements — a claim that cannot be made in most other areas of investment banking.

"The private placement business is a very good barometer for how we're doing in pursuing our [merchant banking] strategy," said Mr. Powell of Bankers Trust. He said his unit has shown consistent growth in volume and profitability in recent years.

Ranked third among commercial banks and 12th among all financial institutions, the private placement business at Bankers Trust generated $5.2 million in 1985, and "in 1986 we're already exceeding $6 million," Mr. Powell said. "It's going to be a very good year."

'The only risk associated with a private placement is the risk of spending a lot of time on a deal and not collecting anything [in the end]. But that's a hell of a lot better than making a $1 million loan and not collecting on that.'

— Walter Bloomenthal
Managing Director
Private Placement Unit
Continental Illinois

Bankers Trust, specializing in lease-related financings and leveraged buyout deals, handled 97 issues worth $2.4 billion last year, according to IDD's tally. Among commercial banks, Bankers Trust's volume was exceeded only by Citibank and second-place Morgan Guaranty.

Handling largely plain-vanilla debt financings for many of the bank's Fortune 500 customers, Morgan is seeking to broaden its private placement clientele beyond that elite group. It ranked 11th among all financial institutions, placing 51 issues worth $2.5 billion last year.

Bank of America, which last month reorganized its corporate finance section, ranked No. 4 among banks and 13th overall by handling $2.2 billion in 292 private placements. The giant West Coast bank is hoping to expand its private placement business, which is comprised primarily of bank borrowers that are first-time issuers in the private securities market. About half of Bank of America's private placement volume came in distributions of mortgage-related securities — an area in which the bank ranked second only to Salomon Brothers last year.

Fifth-place First Chicago handled 82 issues worth $2.1 billion in 1985, generating most of its business from the bank's midwestern client base. At Continental Illinois, Mr. Bloomenthal said he expects his bank's 1986 private placement volume to be "up substantially" from the $542 million it handled last year.

Banks in past years wavered in their commitment to the investment banking business but today are beefing up their private placement staffs. Examples: First Chicago's unit has grown to seven specialists from three when it opened in 1983. Morgan has doubled its staff from five in 1983 to 10 today. And Citibank now employs 11 professionals specializing in the private market, compared to just one staffer about two and a half years ago.

"Commercial banks over the previous 10-year period have been without clarity of vision in investment banking," said Mr. Lawrence of Citibank. But even after zeroing in on their goals and progressing steadily last year, banks still face the challenge of breaking up long-standing customer relationships enjoyed by the big Wall Street houses.

"It's a fiercely competitive business," said Mr. Powell of Bankers Trust. Some have gone as far as undercutting fees in order to win market share from the Salomons and Goldmans of Wall Street, according to market sources.

Still, many banks have failed to change their old-fashioned ways, persisting in the attitude that a private placement is one less loan booked by the bank. "Some have tried and failed miserably because of that conflict," Mr. Powell said.

On Friday, the last part of this series will examine commercial banks as managers of new issues in the overseas bond markets.

➻ **Continued from Page 21**

the Ford Motor Co., hoping to win the right for banks to take part in its incentive programs. The discussions were unsuccessful.

The state laws in question never have been tested, the association said.

"We believe strongly that car buyers and all borrowers should have the widest possible access to loans at the lowest possible rates," said Thomas Honey, the president of the association.

He added, "We also believe that borrowers should have the opportunity to obtain loans from the consumer banking organizations with which they have long-standing relationships and which experience shows they prefer."

Meanwhile, the American Bankers Association said it has prepared a brochure for banks to use in attempting to win back auto loan customers. Among the "ten tips to save money on financing your new car or truck," as the brochure is called, are warnings that reduced rate financing may be available only on certain models and the suggestion that use of incentive rates may limit a consumer's ability to negotiate a better price. ■

Dear Reader, How Are We Doing?

The editors of *American Banker* want very much to provide you with information that is useful to you in managing your institutions. Banks See Profit in Private Placements

Continued from Page 1

houses.

In a private placement, corporations typically sell their securities to a small number of professional investors, such as insurance companies or pension funds. Because private placements are free of disclosure requirements, they are attractive to corporate borrowers seeking to raise quick capital and avoid the red tape associated with the public debt markets. "With a private issue, we can go in and get a commitment [from investors] in a couple of hours," said Neil Powell, who heads the private placement operation at Bankers Trust Co.

For Tifco, there were few other viable or cheaper sources of capital. The firm wanted to avoid borrowing from its parent insurance company, Alexander & Alexander, which had better uses for its investment capital. And as a wholly owned, unrated subsidiary, it was locked out of both the public debt market and the commercial paper market.

Citibank's answer was to sell seven-year subordinated notes in the private market and, through an interest-rate swap, allow Tifco to pay investors a floating rate based on commercial paper rates rather than locking into fixed-rate payments. "The private market was a better way of solving the client's problem than using the bank's own money," said Rob Lawrence, vice president and head of Citibank's long-term finance department, which includes private placements.

> 'The private placement business is a very good barometer for how we're doing in pursuing our [merchant banking] strategy.'
>
> — Neil Powell
> **Head of private placement operation**
> **Bankers Trust Co.**

In 1985, Citibank called on its 11-member private placement team to raise more than $2.9 billion in 104 issues, according to IDD Information Services, which ranks commercial banks and securities firms by the volume of private placements they handle. In that tally, Citibank ranked No. 1 among banks and ninth among all institutions for the year.

Four other big banks — Morgan Guaranty Trust Co., Bankers Trust Co., Bank of America, and First National Bank of Chicago — each handled more than $2 billion in private placements last year, according to the IDD ranking. With Citibank, those institutions make up the top five commercial banks in the private placement business, and fall within the top 15 among all institutions.

The ranking is based on the broadest possible definition of a private placement, which goes well beyond the traditional "plain vanilla" sale of debt securities.

It includes placements of certificates of deposit for other institutions, and mortgage-related securities — two areas in which banks naturally excel. The tally also counts securities placed with registration rights, a feature that allows an issuer to register its obligations with the Securities and Exchange Commission at a later date. Some investment banks employ registration rights to finance acquisitions, but federal law precludes commercial banks from han-

High Rankings More Coveted than Most Bankers Admit

By ANDREW ALBERT

NEW YORK — There's something about a published ranking that gets the competitive juices flowing in businesspeople.

Most executives express lack of interest in the so-called league tables, shrugging them off as crude measures of business volume. "Profitability is far more important to us than volume," they say with a yawn. That is, until one asks Bank X why it handled less volume than Bank Y.

Take, for instance, the ranking of private placement volume handled by commercial and investment banks in 1985. The table compiled by IDD Information Services, a financial data firm, placed New York-based Citibank first among commercial banks. Rounding out the top five were: Morgan Guaranty Trust Co., New York; Bankers Trust Co., New York; Bank of America, San Francisco, and First National Bank of Chicago.

For starters, officials at Bankers Trust are quick to point out that IDD will soon publish a revised table moving the bank's private placement unit into second place, one notch ahead of Morgan.

In addition, a few of the runners-up, who requested anonymity, questioned the integrity of the volume figures that Citibank reported to IDD.

"Citibank really hyped its numbers last year," said one private placement chief at a rival bank. He said that the nation's largest bank disguised some of its syndicated loans as securities sales to artificially inflate its private placement volume.

Not true, said Rob Lawrence, who runs Citibank's private placement unit: "We have not bulked up our numbers."

In a private placement, bankers help raise capital for corporations by selling the corporations' securities to a small group of professional investors, such as insurance firms

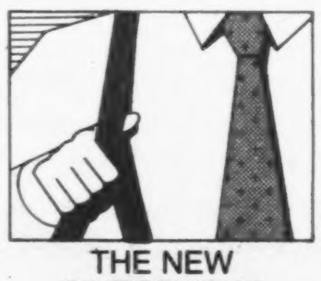
AN AMERICAN BANKER SPECIAL

US Banks Keep a Hand in International Bonds

But Securities Firms Have Lion's Share of Market

By M.S. MENDELSOHN



THE NEW INVESTMENT BANKERS

LAST OF A SERIES

LONDON — Most big U.S. commercial banks act through their offshore investment banking units to manage new issues on international bond markets.

However, except for Morgan Guaranty Trust Co. and perhaps Bankers Trust Co., their role in those markets is so small that people wonder why they bother.

"It's a good question," said an executive at the London investment banking subsidiary of a large New York commercial bank. "We have had a lot of discussions about why we are in this business at all, and the signals we get from New York are unclear because they are mixed."

How the top banks ranked among themselves in investment banking activities
Page 15

Morgan's overseas reach
Page 16

Today, the final part of the *American Banker's* investment banking series examines the overseas underwriting operations of U.S. banks, looking closely at why they bother.

Until recently, the weakness of U.S. bank underwriters in the international bond markets did not seem to matter much. During most of the 1970s, bond proceeds accounted for slightly less than half the funds raised on the international capital market. Syndicated loans accounted for slightly more than

Eurobonds: Page 15 ➸

HOW U.S. COMMERCIAL BANKS RANK AMONG THE WORLD'S EUROBOND BOOKRUNNERS

1985 Rank Among U.S. Banks Only	Book Manager	1985 Rank Among All Institutions	Vol. Underwritten U.S. Dollar Equiv. (In Billions)*	No. of Issues Managed	Market Share %
	KING OF THE HILL

BankAmerica Got Bad News a Week Ago

Loan Damage Undetected Until All Figures Were In, Officer Says

By ROBERT LUKE

LOS ANGELES — BankAmerica Corp. was unaware of a massive deterioration of its loan portfolio until July 10, its chief financial officer, John S. Poelker, said Thursday.

A week after that, BankAmerica announced a $640 million loss in the second quarter, because of a $988 million provision for future loan losses. It attributed the loss provision to eroding asset quality in the energy and commercial real estate sectors.

"It was last Thursday, when we began to get the data gathered up [from 1,000 loan officers worldwide], that we began to get the feeling we would have a situation dramatically different than as recently as three months ago," Mr. Poelker said in an interview.

First Interstate Earnings

AN AMERICAN BANKER SPECIAL REPORT

US Banks Edge into Eurobonds

➻ **Continued from Page 1**

half. The offshore outlets of U.S. commercial banks dominated the international syndicated loan market, giving lesser priority to the bond markets.

But since 1982, the proportion of international market capital raised by bond issues has increased from about 42% to 65%, while the proportion contributed by syndicated bank loans has fallen from 55% to 13.5%. The massive shift to the bond market goes a long way toward explaining why U.S. banks insist on maintaining their investment banking footholds abroad.

Still, U.S. banks have fallen far short of making up for lost loan business with Eurobond book-running volume. In fact, when ranked by the volume of new issues managed on the international bond markets, only one U.S. bank — Morgan Guaranty — placed higher than 18th.

Once again, the business was dominated in 1985 by Credit Suisse First Boston Ltd. — an investment bank owned partly by First Boston Inc., the U.S. securities firm. The London-based house ran the books for 100 new international bond issues worth more than $19 billion, according to a tally compiled jointly by Securities Data Co., a financial information firm, and *Euromoney*, a British magazine.

Underwriters were ranked by the volume of new Eurobond and foreign bond issues they managed in 1985; full credit for each public issue was given to lead managers only.

Eurobonds have more international flavor than foreign bonds because they are issued across the world, particularly in Europe and Asia, in any number of currencies by an international syndicate. Foreign bonds are issued in a particular country, in the currency of that country. They are generally underwritten by a syndicate in that same country, but the issuing company is usually based outside that nation.

Last year's new issue market, the tally showed, totaled about $150 billion. Other estimates, which include Yankee bonds issued for nonresident borrowers in New York as well as private placements in all markets, show new issuing volume of about $165 billion for 1985 — an all-time record year, although volume in the first half of this year has been running even higher.

Based on $150 billion in volume, Credit Suisse First Boston holds a 12.7% share of the market, exceeding the combined market share — 11% — of the nine leading U.S. commercial banks in the business.

Only Morgan Guaranty, a perennial runner-up to Credit Suisse First Boston, with a 5.5% share of the market in 1985, can be considered a serious challenger. Through its London outfit, Morgan Guaranty Ltd., it acted as lead manager in 67 issues worth $8.2 billion. It finished the year ranked No. 2 among all bookrunners and first among U.S. commercial banks.

Bankers Trust placed 16th overall and second among U.S. banks, with a market share of about 1.6%. It acted as lead manager on 25 issues valued at about $2.4 billion.

The biggest American commercial banks hardly figure in this league. Bank of America placed 23d among all underwriters in 1985 and third among U.S. banks. Citibank, fourth among American banks, ranked 27th overall. Chase Manhattan was fifth among banks and 32d overall, while Manufacturers Hanover Trust Co. came in sixth in the U.S. bank grouping and 47th overall.

Of the nation's 10 largest commercial banks, First National Bank of Chicago, Chemical Bank, Security Pacific National Bank, and Continental Illinois National Bank and Trust Company of Chicago failed to rank among the top 50 overseas managers of Eurobond issues.

Bank of America, Citibank, Chase, and Manufacturers Hanover together achieved a market share of 3.6% in 1985, which was smaller than any of the nine institutions at the top of the league — Credit Suisse First Boston; Morgan Guaranty; Merrill Lynch International; Salomon Brothers Inc.; Deutsche Bank AG; Nomura Securities Co.; Morgan Stanley & Co.; Goldman, Sachs & Co.; and United Bank AG, Switzerland.

There are several explanations for why American commercial banks have so far made only modest inroads as managers of new international bond issues. For half a century, the Glass-Steagall Act has created a greater divide between commercial and investment banking than in many other countries. Only in the past 20 years or so have U.S. commercial banks established investment banking subsidiaries in offshore centers to conduct business deemed off-limits at home.

Therefore, it is not surprising that American investment banks have secured more business as lead managers in the international bond markets than the investment banking offshoots of U.S. commercial banks. After all, firms like Merrill Lynch, Salomon Brothers, and Morgan Stanley have used their domestic freedom to develop expertise and customer relationships in offshore markets.

HOW THE TEN LARGEST U.S. BANKS RANK IN 1985 INVESTMENT BANKING ACTIVITIES

	M&A Advice	Swaps Activity	Public Finance	Private Placements	Eurobond Underwriting
Citibank	1	1	3	1	4
Bankers Trust	2	2	1	3	2
Morgan Guaranty	N/A	4	2	2	1
Manufacturers Han.	3	3	6	9	6
Bank of America	5	8	8	4	3
Chase Manhattan	4	7	5	7	5
Chemical Bank	N/A	5	4	N/A	9
First Chicago	6	6	7	5	7
Continental Illinois	NA	N/A	11	6	N/A
Security National Bank	*	N/A	9	N/A	N/A

N/A Bank did not provide data needed for ranking
* Does not offer the service

The table shows where the largest banks ranked among themselves in the five investment banking businesses examined by *American Banker* this week.

Two U.S. commercial banks that have so far made the biggest splash overseas are wholesale banks — Morgan Guaranty and Bankers Trust. Their business approach more closely resembles investment banking than do those of most other U.S. commercial banks.

Running the books for international bond issues is widely viewed as a high-volume, low-profit-margin business, which causes some U.S. banks to shy away from the Euromarket.

"We have never wished to be the biggest in a league table for a volume business like that," said David O. Beim, managing director in charge of relationships with the bank's biggest corporate finance clients. He said the benefits of being No. 1 in that field can be outweighed by price competition among underwriters.

The presence of U.S. commercial banks in the primary market for international bond issues makes more sense against the background of profound changes in the international capital markets, where an increasing proportion of bond issues are swap-driven. This means they are issued by borrowers who intend to swap interest and currency positions with counterparts elsewhere. This way, each borrower, in effect, obtains funds in other markets at the finest terms that could be commanded in the home market.

"Our real interest is trading in the secondary markets," said one American banker in London. "We are not so much concerned about managing new issues as in trading bonds."

U.S. banks, with their strong foreign exchange dealing capacity, are extremely prominent in the interest rate and currency swap business — an area the *American Banker* examined Tuesday as part of this series. Citicorp claims it initiated the first Euro-swap operations as long ago as 1976, and invented the Euronote in 1978.

With the decline in syndicated international lending in the past four years, commercial banks have partially offset the lost interest income with fee income generated by the arrangement of note issuance and other backup facilities.

In addition, currency and interest rates swaps generate fees and offer opportunities for profitable trading on the foreign exchanges and interest rate futures markets. Informal estimates put the volume of 1985 currency swaps at $23 billion and the volume of interest swaps far above that figure.

In the past few years, securities firms have been rewarded by a rapid volume increase in their specialty areas: new issues and trading in the international bond markets. Commercial banks, on the other hand, have seen a decline in their specialty business of international syndicated lending.

U.S. bankers have recovered part of those revenues by generating fee income from relatively new markets. But commercial banks in the international money and capital markets are under some pressure to establish themselves in all sectors. Hence, their presence in the international bond markets, albeit a modest one. ■

WEEKLY REVIEW AND OUTLOOK — Pull Out Section Starting on Page 9

INSIGHT: The problem of nonperforming loans is proving more sticky than bankers had anticipated, if second-quarter results are any indication. Several of the nation's largest holding companies, after showing stability in credit quality in recent quarters, boosted second-quarter loan-loss provisions enough to cause earnings declines from 1985 second-quarter and 1986 first-quarter results... 9

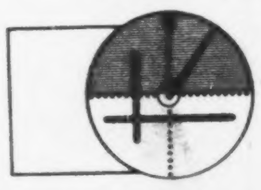
Bankers Trust's Very Profitable Hidden Asset

ProfitCo Unit Will Bring in 40% of Banking Firm's Noninterest Income This Year

By TOM FERRIS

NEW YORK — Eight years ago, mired among the industry's poor performers, the Bankers Trust Co. took a bold gamble and began transforming itself into an investment banking giant. Radical though it was, the move now is regarded widely as a masterstroke that catapulted Bankers Trust into the ranks of the elite.



Corporate Strategy

However, while earnings relative to its peers have been outstanding, the enthusiasm of investors has been tempered somewhat by the source of those profits. The cyclical nature of corporate finance income is one worry, as is the risk involved in the volatile, high-stakes environment of Wall Street.

To counteract this, the bank looked for additional lines of business that would produce steady, reliable, and low-risk earnings. What was needed, said David K. Sias Jr., an executive vice president of the bank, was "an annuity business which is large enough in absolute terms to not only smooth out the peaks and valleys, but also to make a meaningful contribution to the bottom line."

The bank's management settled on a variety of fee-based transactional and informational services that would be sold to corporations, organizations, government entities, and wealthy individuals. A separate unit, dubbed ProfitCo, was set up 18 months ago to market these investment, trust, cash-management, and securities-processing products. In a key part of the unusual strategy, the unit was given virtual independence from the bank — with separate data processing systems and salesmen — and a mandate that each product segment be profitable on a stand-alone basis.

ProfitCo: Page 22 ➻

Wriston Says Business of Banking Still Is Information

By NINA EASTON

NEW YORK — Walter B. Wriston likes what he "reads in the paper" about Citicorp — as he carefully phrases it.

After years of standing at podiums to espouse his vision that banks will face fierce competition from those companies with extensive information networks, Citicorp — the bank that Mr. Wriston led overseas and into the electronic age — has purchased Quotron Systems, Inc., a Los Angeles company that provides stock quotes and other financial information electronically.

"It seems to me to be a terrific idea," Mr. Wriston says. "I think the strategy those fellows have devised is terrific." He adds, "I have no doubt they'll be in the insurance business in a very big way."

"Those fellows" is a reference to the team at Citicorp led by Mr. Wriston's hand-picked successor, John S. Reed. In his comments about Citicorp during a recent interview, Mr. Wriston made clear that he is anxious not to appear to be meddling in the top management's plans for the bank.

During Mr. Wriston's 17-year reign at Citicorp, assets grew from \$17.5 billion to \$150.6 billion. The bank broke through geographic boundaries and moved into an array of new products, including investment banking and insurance. Along the way, the bank gained a reputation for being brash, arrogant — and enviably innovative.

Mr. Wriston, who turns 67 on Aug. 3, retired as Citicorp chairman and chief executive in September 1984. He has since worked out of a modest — though tightly secured — fourth-floor office at Citicorp Center in midtown Manhattan. He shares a suite, dotted with artifacts from world travels, with William I. Spencer, who retired as president of Citicorp in 1982.

If Mr. Wriston's small, cluttered office gives the impression that he has come down in the world, the photos on the wall are a jolting reminder of his international stature. He poses with President and Mrs. Reagan, with the Carters, with Richard Nixon. He sits in a meeting with then-President Gerald Ford to discuss the financial crisis facing New York City. He shakes hands with the now deposed Philippines President Ferdinand E. Marcos and his wife, Imelda.

Since leaving Citicorp, Mr. Wriston has chaired President Reagan's Economic Advisory Policy Board, a group of industry leaders who advise the President. He also has published a compendium of his writings and speeches, "Risk & Other Four-Letter Words," that reveals more about his own political conservatism and relentless optimism than it does about the Citicorp strategy that has provoked so much interest and controversy.

While the book's publisher, Harper & Row, won't release sales

Interstate Disputes Swap Rankings

To the Editor:

As the *American Banker* is usually a reliable source of information, we at First Interstate Bank Ltd. were somewhat surprised by your front page report ["Banks Outstrip Wall Street in Swap Market," July 15] on how the top banks rank in interest rate swaps.

THE NEW INVESTMENT BANKERS

Recently, we compiled data that is available in the Federal Reserve call reports on the notional principal dollar amounts outstanding as of Dec. 31, 1985, for the top 15 banks in the United States and found that First Interstate Bank of California ranked ninth, ahead of a number of banks with larger deposit bases.

Also, when transactions booked by subsidiaries of First Interstate Bancorp are included, First Interstate ranks seventh overall. In 1985, First Interstate booked some $5.8 billion in notional principal of swaps on 342 transactions, numbers that do not include a number of currency swap transactions done by our London merchant bank or transactions that it brokered and did not take on to its books.

First Interstate has been active in the swaps market since 1982 and currently has a team of some 20 professionals operating out of London, New York, Los Angeles, Tokyo, and Chicago. We are a member of the International Swap Dealers Association, and Allan Wilson, a cochairman of our London merchant bank and one of the creators of the swap product, is chairman of International Swap Dealers Association in London.

Besides quantity, however, quality is also important. As you noted in your accompanying article on profitability, the market for "plain vanilla" swaps has become a commodity market. The real value added, both for customers and for the bottom line of a swap department, comes from arranging complex swaps that meet specific asset or liability needs.

It is in this area that swaps come to the fore as a corporate finance tool as opposed to a traded commodity. First Interstate has been and continues to be active in swapping complex cash flows to solve clients' problems. It has completed zero coupon structures, amortizing transactions, forward/forward swaps, and transactions in such indexes as commercial paper, Treasury bills, and prime, not to mention currency transactions.

Notional Value of Outstanding Swaps at Biggest US Banks

Market Share Rank		Notional Value As of 12/85 ($ in thousands)
1	Citibank	$33,380,000
2	Bankers Trust Co.	23,541,000
3	Chase Manhattan Bank	23,541,000
4	Manufacturers Hanover	22,413,601
5	Morgan Guaranty Trust	21,450,000
6	Chemical Bank	16,051,133
7	First Interstate Bancorp*	9,036,000
8	First Chicago	8,458,000
9	Bank of America	7,367,000
10	First Interstate Bank of Cal.	7,176,760
11	Continental Illinois	3,322,362
12	Marine Midland Bank	3,154,600
13	Mellon Bank	2,440,046
14	First National Bank of Boston	1,482,270
15	Security Pacific	1,328,598
16	Wells Fargo Bank	220,000

List was compiled by First Interstate Bank, based on disclosures in Federal Reserve call reports. *Figures for the holding company include volume for First Interstate Bank of California.

A transaction that typifies our expertise is the swap we completed last year for the Times Mirror Co., which fixed the rate on a nine and a half year, tax-spared, prime-based funding with annual amortizations.

It seems obvious to us that ability among banks in corporate finance and especially in swaps is not tied directly to a deposit base, and we would hope that you would recognize this in the future.

Douglas Metcalf
Senior Vice President
and Managing Director
First Interstate Bank Ltd.
Los Angeles

Consumers Also Must Understand Check Hold Policy

To the Editor:

In your May 29, 1986, issue, [page 4] Michael Urkowitz attempted to "clear the fog" surrounding check hold policies. In fact, he fell into the usual banker's trap: He failed to appreciate the problem as seen by the consumer.

It makes no difference to the consumer whether the check is cleared or collected. The disparity between the two words is one of semantics to the public. What the public and Congress understand is that the bank receives payment for perfectly good checks well before access is granted. The consumer does not care that balance credit begins or that savings account interest is paid. Besides, when the savings rate was 5.25% and the funds rate 15%, that argument was useless.

Mr. Urkowitz is perfectly on target when he talks about productive understanding, but that understanding must begin with the people who are trying to explain the problem to the public. The understanding should start with a perception of what the public thinks and stop looking at explanations from the banker's technical point of view. There is a perception of a problem; therefore, there is a problem. The operating stream must be shortened and the public enlightened. Unfortunately, the former probably will happen before the latter.

John H. Burd
Chief Operating Officer
Financial Options Group

The Financial Options Group is a Philadelphia brokerage firm. Mr. Burd was formerly a vice president in charge of money management at the Girard Bank, Philadelphia.

Japanese Banks Again Winners In Top 500 Race

By L. MICHAEL CACACE

NEW YORK — For the second year in a row, Japanese banks substantially increased their domination of the world's top 500 banks, based on 1985 yearend deposits.

Top 500 Banks in Worldwide Deposits, Tables Start on Page 53

Last year's deposit growth was attributable to the appreciation of the yen against the dollar and the continued strength of domestic deposits — helped by a strong economy and the deregulation of the financial industry.

Japan is now the home of the world's top four deposit-taking institutions and seven of the top 10 world banks. In 1984, the top three banks in the world were Japanese, as were five of the top 10 banks. In 1980, just five years ago, no Japanese bank ranked among the top five in the world, and only one

AN AMERICAN BANKER SPECIAL REPORT

Tax Changes Seen Boosting Individual Pension Products

By PHILIP T. SUDO

NEW YORK — Nothing has been finalized yet, but pension experts predict that tax reform will create significant marketing opportunities for firms offering retirement financial services.

Accountants, marketers, and consultants say that in the short term, the changes proposed in the Senate and House tax bills will boost demand by individuals for an array of retirement products, though in the long term, it could have adverse effects on the nation's private pension system overall.

"Tax reform requires everyone who's been saving toward retirement to ask, 'Am I saving in the right place?' " said Gary J. Strum, first vice president for pension services at E.F. Hutton & Co. "It couldn't happen at a better time for the brokerage industry, with the stock market high and interest rates low. It's a super marketing opportunity."

Stockbrokers, mutual funds, and insurers are perhaps in the best position to benefit from the expected pension- and retirement-related changes in the tax code. Given the regulatory limits on their product lines, banks and thrifts have fewer avenues to pursue, but will benefit nonetheless.

"If banks are thought of as the home of fully taxable products, then the removal of tax shelters and capital gains should benefit them, because there will be a more level playing field," said John Kneen, a pension consultant at

Retirement: Page 12 ➔

Outlook for Individual Investors Page 6

Tax Bill Update Page 6

LOOKING FOR OPPORTUNITIES FROM TAX REFORM

Tax reform legislation promises to bring about major changes in consumer investment and borrowing patterns. It will also alter corporate investment decisions and radically restructure large areas of real estate finance. The result: new opportunities for financial services companies that can meet the changing needs of retail and commercial customers. This article is the first in a series of occasional reports on those new opportunities.

(a) — Figures shown are the dollar values per unit of foreign currency. The currencies are converted into dollars using the New York cable rate for the date shown. **(b)** — On June 15, 1985, a new monetary unit was introduced. It is called the "austral". One austral is worth 1,000 old pesos. **(c)** — The date comparisons are 10/31/85 to 10/31/84. **(d)** — Banks in country are dollar-denominated. **(e)** — The date comparisons are 9/30/85 to 9/30/84. **(f)** — The date comparisons are 6/30/85 to 6/30/84. **(g)**— The date comparisons are 3/20/86 to 3/20/85. **(h)** — Banks in country use Swiss francs. **(i)** — The date comparisons are 3/31/86 to 3/31/85. **(j)** — At yearend 1985, the new Israeli shekel (NIS) replaced the old shekel. One new Israeli shekel is worth 1,000 old shelels. The exchange rate shown for 12/31/85 is for the old shekel.

Japanese Banks Push Further Ahead in Top 500 Deposit Race

➙ Continued from Page 1

ranked among the top 10.

These are some of the findings of the *American Banker's* 30th annual survey of the world's top 500 banks, ranked by deposits, published today. The top 500 world banks ranked by assets will be published on Wednesday.

From Sept. 30, 1984, to Sept. 30, 1985 — the dates of the figures for all Japanese banks in the survey — the yen appreciated 14.1% against the dollar. Because the deposits of foreign banks are converted into dollars, a rise in exchange rates of foreign currencies against the dollar increases these banks' dollar-denominated deposits.

In addition to a rise in exchange rates, the 96 Japanese banks posted a 10% rise in their yen-denominated deposits last year. As a result, the dollar-denominated deposits of these Japanese banks rose by 24.5% last year.

The 96 Japanese banks in the top 500 had combined deposits totaling $2.18 trillion last year, or 31% of the top 500 banks' deposit total of $7.02 trillion. In 1984, the 95 Japanese banks ranked among the top 500 had $1.75 trillion in deposits, or 29.8% of the $5.85 trillion deposit total for the top 500 banks. Japanese banks accounted for almost 37% of the deposit gain posted by the top 500 banks.

Dai-Ichi Kangyo Bank Ltd., Tokyo, solidified its position as the world's top bank in deposits with $124.6 billion, up 31% from $95.1 billion a year earlier. Dai-Ichi Kangyo had surpassed Bank of America as the world's top deposit-taking institution in 1984.

The sharp appreciation of the yen since Sept. 30 has pushed up the dollar-denominated deposits of Dai-Ichi Kango Bank even further. According to *preliminary data* recently received from the bank, total deposits on March 31, 1986, totaled 26.9 trillion yen, virtually unchanged from its Sept. 30 total. However, the yen appreciated 21.7% over that six-month period, from $0.004626 per yen to $0.005629. As a result, the dollar-denominated deposits of Dai-Ichi Kangyo rose by the same percentage as the yen to approximately $151.6 billion on March 31, from $124.6 billion on Sept. 30.

Fuji Bank Ltd., Tokyo, remained in second place, with deposits of $109.7 billion, up 21% from 1984; and Sumitomo Bank Ltd., Osaka, again was third, with $108.5 billion, up 20.7% from the year before.

Mitsubishi Bank Ltd., Tokyo, moved up a notch to fourth place, with deposits of $102.8 billion, up 17.8% from the preceding year.

The other three Japanese banks ranking among the top 10 are Sanwa Bank Ltd., Osaka, which ranked sixth; Norinchukin Bank, Tokyo, which ranked ninth; and the Industrial Bank of Japan Ltd., Tokyo, which ranked 10th.

Sanwa Bank moved up two places in rank, with a 22% deposit gain to $99.1 billion. Norinchukin Bank had a 27% deposit gain to $93.2 billion to move up four places in rank. And the Industrial Bank of Japan jumped five places in rank, with deposits of $89.7 billion, 26% higher than the year before.

Largest Non-Japanese Bank

Banque National de Paris is the largest non-Japanese bank in the world and ranks fifth overall, with deposits of $102.5 billion on Dec. 31, 1985, up 23.8% from $82.8 billion in 1984, when it ranked seventh. It was helped by the 29.1% appreciation of the franc from yearend 1984 to yearend 1985.

Credit Lyonnais, Paris, moved up three places in rank to seventh place, with $95.7 billion in deposits, up 23.5% from the year before.

Citibank, New York, the largest bank in the United States, ranked eighth in the world last year, with deposits of $94.4 billion, up 18.6% from $79.6 billion at yearend 1984, when the bank ranked ninth.

The Bank of America — the world's top bank in 1983 — ranked 12th last year, with deposits of $88.2 billion, virtually unchanged from its yearend 1984 total, when it ranked fourth.

Reasons for Japanese Growth

Shigeru Abe, chief economist of the Institute for Financial Affairs, Tokyo, cited several reasons for the continued strong growth of yen-denominated deposits at Japanese banks in 1985.

First was the strong Japanese economy. "The Japanese economy as a whole continued to expand at a moderate pace in 1985, with a high level of exports. The current account shows a large surplus of $49.2 billion. As a result, GNP for 1985 is estimated to be 320 trillion yen, with a 5.7% nominal growth rate and a 4.2% real growth rate.

Second, he said the banks continued to reap benefits from he deregulation and liberalization which began in late 1984. "The Ministry of Finance has steadily endeavoured to permit new banking services and new kinds of products in financial institutions.

For example, Japanese banks started to sell money market certificates, a new product in Japan, in March 1985. In April 1985, the ministry lowered the minimum denomination of certificates of deposit from 300 million yen to 100 million yen and the minimum term of a CD from three months to one month. These measures have encouraged deposits in domestic branches of various kinds of banks and financial institutions."

The trust banks also introduced a new product called a "tokkin." This is a "specially designated money-in-trust account" offering liquidity and a relatively high rate of interest.

Mr. Abe said, "The deposit gains of Japanese trust banks also reflect the increase of pension trusts and CDs."

Mr. Abe attributed the 15% growth of Dai-Ichi Kangyo Bank's domestic deposits last year largely to the bank's marketing campaign on the occasion of its 15th anniversary.

Reasons for Dollar's Decline

The major reason for the decline in the dollar last year was the U.S. current account deficit, which reached a record level in 1985. Imports exceeded exports by $132.1 billion in 1985, up 22.5% from the $107.9 billion deficit in 1984 and more than double the $57.6 billion deficit of 1983.

The large trade deficits were attributable to the strong appreciation of the dollar against all the major currencies of the world over the past several years. The strong dollar was pushing the prices of U.S. products so high that they were uncompetitive in the rest of the world, threatening the country's industrial capabilities. And this in turn was leading to demands in Congress for protectionist legislation.

Against this backdrop, the finance

...affordable, comprehensive, *and* quarterly...

Depository Institutions Performance Directory
by Lyons, Zomback & Ostrowski, Inc.

This valuable directory, packed with vital data, analysis and commentary, helps you monitor the financial health of every FDIC- or FSLIC-insured depository institution in the country–including commercial banks, savings and loan associations, savings banks, and bank holding companies.

For every insured institution, the **Directory** gives you the latest quarterly figures from the Federal Reserve Board, *plus* the past three years' data on:

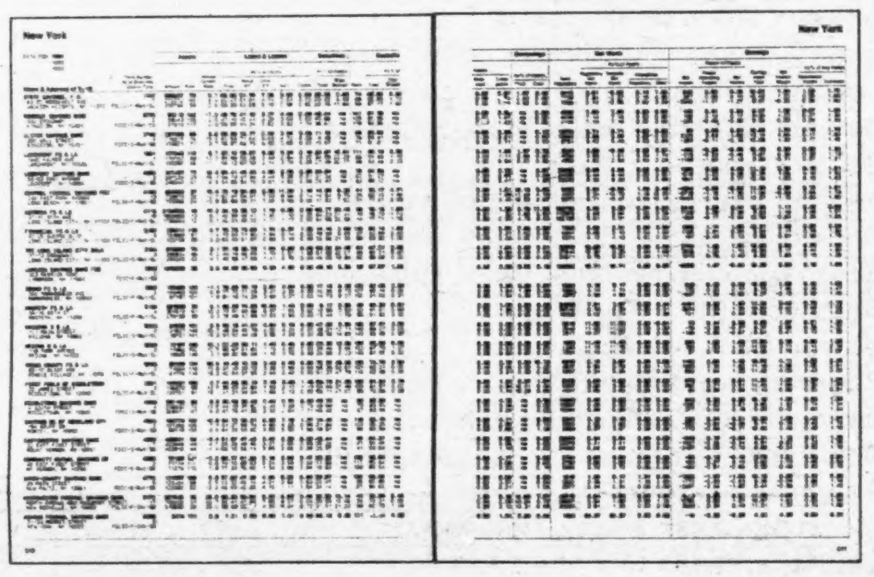
Profitability
☐ Return on Assets
☐ Earning Asset Yields and Net Interest Margins
☐ Non-Interest Income and Overhead Levels

Capital Adequacy
☐ Regulatory Capital Ratios
☐ Intangible Asset Levels

Commercial Bank Asset Quality
☐ Net Charge-Offs
☐ Sub-Quality Assets and Reserve Levels

Size and Growth
☐ Asset and Deposit Rankings and Growth Rates

Balance Sheet Structure
☐ Commercial, Real Estate, and Consumer Loan Levels
☐ Deposit Levels and Dependence on Large Denomination Deposits



Asset and Deposit Rankings

PRICE: $295.00 3 Volume Set

The thorough peer group coverage in the **Directory** allows you to evaluate your institution's performance by comparing it *directly* to that of competitive institutions. You discover firsthand what kinds of services the competition is offering... how well a particular management strategy worked last year... what types of deposits are being taken in... what kinds of loans are being offered... how many branches an institution has... and more. Best of all, this vital information is completely updated *every quarter.*

Successful bank strategies are what count. You can improve your bottom line, as long as you have all the available information. And it's all here in **Depository Institutions Performance Directory.**

Honolulu Thrift Posts Record 1st-Half Earnings

Special to the American Banker

HONOLULU — Territorial Savings and Loan Association, recovering from serious financial difficulties, has reported record first-half earnings.

The Honolulu-based thrift, Hawaii's second-smallest with total assets of $302.4 million, reported that net earnings through June 30 exceeded $4.5 million. The profits compare with a $603,000 loss during the same period last year.

Territorial president Daniel L. Colin said first-quarter earnings were $2.43 million, followed by second-quarter earnings of $2.1 million. Much of the first-quarter earnings resulted from extraordinary gains on security sales. Second-quarter earnings, meanwhile, reflected a settlement — believed to be of more than $1 million — from a lengthy court battle with two former directors who allegedly defrauded Territorial while on the thrift's board.

But Mr. Colin said operating profits also have increased steadily since January, and he attributed Territorial's improved performance to reduced expenses and strong loan demand, a result of lower interest rates.

Territorial, with 11 offices in the islands, closed more than 300 mortgage loans for a total of $29.8 million since January, more than all loans generated in 1985, Mr. Colin said. ■

➸ Continued from Page 70

that opinion.

"There was a case here in which a savings and loan was offering special rates to women only and that was ruled illegal because it discriminated against men," the regulatory official said. "But anybody could become a stockholder [of Glenfed] if they wanted to."

William Moore Jr., president of Trident Financial Corp., a Raleigh, N.C., consulting firm, said that for years he has been advising converting thrifts to sell as much stock as they can to their customer base. "They're much more likely to develop a good relationship with shareholders that way." The converse — endeavoring to turn shareholders into customers — sounds equally sensible, he added.

Benefits have been given to shareholders before, although never before on a scale as large as Glendale Federal's, Mr. Moore said. "It [the benefits] cements business relationships," he said.

Frank M. Pruett, president of the North American Savings Association, a $420 million-asset Kansas City institution that recently converted from mutual to stock ownership, said it practices a "soft-sell" version of cross-selling to investors. On a routine basis, he said, the thrift "reminds" shareholders that it also offers the services of an insurance firm, finance firm, and travel agency.

"I tell our marketing people that, 'Right now, these are our friends,' " he said of North American's shareholders, adding that the thrift might try Glendale Federal's direct approach.

But not all shareholders may be so easily approachable, said Bob Bartlett, senior vice president for the U.S. League. "People who buy shares are usually investor types, not likely to become depositors," he said. "The shareholder profile is more conservative."

A representative of California Federal Savings and Loan Association in Los Angles was similarly skeptical. While conceding that the cross-selling campaign was "an interesting concept," he said that Calfed objects to the kind of two-tiered pricing embodied in Glenfed's bonus rate. ■

Strategic Dates

Jan. 1, 1987

WISCONSIN TRIGGER: Effective today, banking companies, savings and loans, and credit unions from Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, Ohio, and Kentucky may acquire respectively, Wisconsin banks, savings and loans, and credit unions. The legislation hinges on reciprocity.

World's Top 500 . . .

➸ Continued from Page 69

ministers of the United States, France, Germany, Britain, and Japan agreed at a meeting at the Plaza Hotel in New York on Sept. 22, 1985, that foreign exchange rates should "better reflect fundamental economic conditions." The so-called Group of Five, or G-5, countries pledged "to cooperate more closely in fostering "some further orderly appreciation of the main nondollar currencies" — in other words, to intervene in world currency markets to drive down the dollar against other currencies, making American goods more competitive abroad.

Since the G-5 meeting, the yen has appreciated by more than 38% vis-a-vis the dollar; the French franc by more than 18%; the West German mark by more than 25%; and the British pound by about 10%.

Although all foreign banks are surveyed directly, savings bank data have been difficult to obtain. Three savings bank associations have provided the *American Banker* with the bulk of the data for the savings banks in their respective countries.

They are: the Association of Swiss Cantonal Banks, Basel, Switzerland; the Confederacion Espanola de Cajas de Ahorros, Madrid; and the Trustee Savings Bank Central Board, London. In addition, the Institute for Financial Affairs Inc., Tokyo, has been an invaluable source of data for Japanese savings ("sogo") banks. ■

Dai-Ichi Kangyo Bank Is World Leader in Assets

Japanese Firm Surpasses Citicorp in First Quarter

By L. MICHAEL CACACE and THERESIA TREPEL

How Yen Boosted Dai-Ichi to Number 1

Top Five Banking Companies in the World

Sept. 30, 1985	$1=216.17 Yen ASSETS ($ Billion)
1. **Citicorp**, New York	163
2. **Dai-Ichi Kangyo Bank Ltd**, Tokyo	158
3. **Fuji Bank, Ltd.**, Tokyo	143
4. **Sumitomo Bank Ltd.**, Osaka	136
5. **Mitsubishi Bank Ltd.**, Tokyo	133

March 31, 1986	$1=177.65 Yen ASSETS ($ Billion)
1. **Dai-Ichi Kangyo Bank Ltd**, Tokyo	207
2. **Citicorp**, New York	176
3. **Fuji Bank, Ltd.**, Tokyo	N.A.
4. **Sumitomo Bank Ltd.**, Osaka	167
5. **Mitsubishi Bank Ltd.**, Tokyo	N.A.

NEW YORK — Helped by the sharp appreciation of the yen against the dollar, Dai-Ichi Kangyo Bank Ltd., Tokyo, surpassed Citicorp in total assets at the end of the first quarter of 1986, and now ranks as the top banking company in the world.

Citicorp — which is listed as the top banking firm in today's rankings based on yearend 1985 assets — had ranked as the world's top bank holding company for four consecutive years.

The yen surged 21.7% against the dollar over the six-month period from Sept. 30, 1985, to March 31, 1986, from $0.004626 per yen to $0.005629.

Because the assets of Japanese banks are converted into dollars, a rise in the yen against the dollar increases these banks' dollar-denominated assets. As a result, the dollar-denominated assets of Dai-Ichi Kangyo soared 30.9% to $207.2 billion on March 31 from $158.3 billion on Sept. 30, 1985.

Behind the Growth of Japan's Big Bank
Page 47

Based on Sept. 30 assets, which are used for all Japanese banks in the *American Banker's* world bank rankings, Dai-Ichi Kangyo Bank ranked second to Citicorp.

Citicorp had total assets of $167.2 billion on Dec. 31, 1985, up 17.1% from $142.7 billion a year earlier to maintain its No. 1 ranking last year. In the first quarter of 1986, its assets rose 5.2% to $175.9 billion on March 31.

These are some of the findings of part two of the *American Banker's* 30th annual world banking survey published

Tax Conferees Move to Erase Loan-Loss Reserve Deduction

By BARTLETT NAYLOR

Tax Bill Update

WASHINGTON — Senate tax writers have proposed eliminating the deduction for bank loan-loss reserves and for interest expense used to finance investment in municipal bonds, moves that are expected to spark a storm of protest from the banking industry.

The proposals reverse the position adopted when the full Senate approved its version of tax reform in June.

Tax experts with the American Bankers Association, which unveiled a major advertising campaign before the Senate Finance Committee took up the issue of tax reform last spring, were not available for comment.

With the sponsorship of Sen. David Boren, D-Okla., and Sen. Bill Bradley, D-N.J., the loan-loss reserve was protected both in the committee and the full Senate.

State and local governments helped lobby for banks taking the interest deduction.

Essentially, the Senate tax writers adopted the bank tax provisions approved by the House. While the negotiations currently are informal, the action on Tuesday increased the probability that the financial industry will be paying a significant level of new taxes.

The loan-loss reserve deduction means that banks can keep 0.6% of their loans in a tax-free reserve.

The Senate had protected the deduction, while the House proposed ending it for banks with more than $500 million in assets. By taxing the reserve, banks would be paying a collective $6 billion to $8 billion.

The House bill already denies the carrying cost deduction for investments in municipal bonds. Also in the House bill, the loan-loss reserve balances of commercial banks affected would be taxed effective 1985. The tax on the balances would be phased in over five years.

The 11 senators on the 22-member House-Senate conference working out the details of a final tax bill have been struggling to find ways of raising revenues to pay for the low individual and corporate tax rates in the Senate version of the bill.

On Tuesday, the senators and House members on the tax conference met in private meetings, and the proposal re-

(a) — Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. Assets exclude contra accounts and contingent liabilities and, for foreign banks, are converted at New York cable rate prevailing on date of bank's figures. Unless otherwise noted after the name ofthe bank, all figures are for fiscal year after 9/30/85. **(c)** — Latest figures are for a different date than previous year. **(d)** — Or date one year prior to latest figures unless otherwise noted after name of bank. **(e)** — Data are for 9/30/85. **(f)** — Data are for 6/30/85. **(g)** — Latest data are prior to 6/30/85. **(h)** — A subsidiary of the $35.5 billion-asset Compagnie Financiere de Credit Industriel et Commercial. **(q)** — A subsidiary the $73.3 billion-asset Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)** — Consolidated data. **(t)** — Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)** — Data are not consolidated for affiliates more than 50% owned. **(w)** — Member of the $11.6 billion-asset Al UBAF Banking Group, Neuilly, France, under whose name the seven UBAF banks operate in the international financial markets. **(†)** — Includes representative offices. **N.A.** — Not available.

The Top 500 Banks in the World

U.S. and Overseas Banks Ranked by Assets on Dec. 31, 1985 or Nearest Fiscal Yearend

(a) — Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. Assets exclude contra accounts and contingent liabilities and, for foreign banks, are converted at New York cable rate prevailing on date of bank's figures. Unless otherwise noted after the name ofthe bank, all figures are for fiscal year after 9/30/85. **(c)** — Latest figures are for a different date than previous year. **(d)** — Or date one year prior to latest figures unless otherwise noted after name of bank. **(e)** — Data are for 9/30/85. **(f)** — Data are for 6/30/85. **(g)** — Latest data are prior to 6/30/85. **(h)** — A subsidiary of the $35.5 billion-asset Compagnie Financiere de Credit Industriel et Commercial. **(q)** — A subsidiary the $73.3 billion-asset Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)** — Consolidated data. **(t)** — Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)** — Data are not consolidated for affiliates more than 50% owned. **(w)** — Member of the $11.6 billion-asset Al UBAF Banking Group, Neuilly, France, under whose name the seven UBAF banks operate in the international financial markets. **(†)** — Includes representative offices. **N.A.** — Not available.

The Top 500 Banks in the World

U.S. and Overseas Banks Ranked by Assets on Dec. 31, 1985 or Nearest Fiscal Yearend

(a) — Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. Assets exclude contra accounts and contingent liabilities and, for foreign banks, are converted at New York cable rate prevailing on date of bank's figures. Unless otherwise noted after the name ofthe bank, all figures are for fiscal year after 9/30/85. **(c)** — Latest figures are for a different date than previous year. **(d)** — Or date one year prior to latest figures unless otherwise noted after name of bank. **(e)** — Data are for 9/30/85. **(f)** — Data are for 6/30/85. **(g)** — Latest data are prior to 6/30/85. **(h)** — A subsidiary of the $35.5 billion-asset Compagnie Financiere de Credit Industriel et Commercial. **(q)** — A subsidiary the $73.3 billion-asset Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)** — Consolidated data. **(t)** — Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)** — Data are not consolidated for affiliates more than 50% owned. **(w)** — Member of the $11.6 billion-asset Al UBAF Banking Group, Neuilly, France, under whose name the seven UBAF banks operate in the international financial markets. **(†)** — Includes representative offices. **N.A.** — Not available.

The Top 500 Banks in the World

U.S. and Overseas Banks Ranked by Assets on Dec. 31, 1985 or Nearest Fiscal Yearend

(a) — Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. Assets exclude contra accounts and contingent liabilities and, for foreign banks, are converted at New York cable rate prevailing on date of bank's figures. Unless otherwise noted after the name ofthe bank, all figures are for fiscal year after 9/30/85. (c) — Latest figures are for a different date than previous year. (d) — Or date one year prior to latest figures unless otherwise noted after name of bank. (e) — Data are for 9/30/85. (f) — Data are for 6/30/85. (g) — Latest data are prior to 6/30/85. (h) — A subsidiary of the $35.5 billion-asset Compagnie Financiere de Credit Industriel et Commercial. (q) — A subsidiary the $73.3 billion-asset Compagnie Financiere de Paribas, Paris, a financial holding company. (s) — Consolidated data. (t) — Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. (u) — Data are not consolidated for affiliates more than 50% owned. (w) — Member of the $11.6 billion-asset Al UBAF Banking Group, Neuilly, France, under whose name the seven UBAF banks operate in the international financial markets. (†) — Includes representative offices. N.A. — Not available.

The Top 500 Banks in the World

U.S. and Overseas Banks Ranked by Assets on Dec. 31, 1985 or Nearest Fiscal Yearend

Dai-Ichi Kangyo Pushes Past Citicorp; Becomes No. 1 in World

➙ Continued from Page 1

today. Two major listings appear in today's edition. The first gives the top 500 commercial and savings banks in the world in total assets, less contra accounts and contingent liabilities, on Dec. 31, 1985. The second lists the top banks and bank holding companies by assets.

Part one of the survey, published Tuesday, listed the top 500 banks in deposits.

According to preliminary data reported by Dai-Ichi Kangyo Bank to the *American Banker*, yen-denominated assets totaled 36.8 trillion on March 31, up 7.6% from the Sept. 30 total of 34.2 trillion. This local currency gain coupled with the sharp gain in the yen over the period, enabled Dai-Ichi Kangyo to surge past Citicorp and become the first banking firm in the world with assets in excess of $200 billion.

The March 31, 1986, assets for Fuji Bank Ltd., Tokyo, were not available. Fuji Bank is the world's third largest banking firm, with assets of $143 billion on Sept. 30, 1985.

However, Sumitomo Bank Ltd., Osaka, the world's fourth largest banking company in assets, with $136 billion on Sept. 30, reported a 22.7% gain in its total assets to $167 billion on March 31. If Fuji Bank's dollar-denominated assets grew at a rate comparable to that of Sumitomo Bank, its March 31 assets would range from approximately $175.5 billion to $176.5 billion. Therefore, it is possible that Fuji Bank also may have moved past Citicorp on March 31.

The major reason for the decline in the dollar against the yen and most of the world's major currencies last year was the huge U.S. current account deficits of the past three years. In 1985, the deficit reached a record level. The large trade deficits were attributable to the strong appreciation of the dollar against all the major currencies of the world over that period.

The dollar's strength was destroying the industrial capabilities of the United States and was leading to U.S. congressional demands for protectionist legislation. Against this background, the finance ministers of the United States, France, Germany, Britain, and Japan — the Group of Five, or G-5, countries — met in New York on Sept. 22, 1985. They agreed to push down the dollar and "to cooperate more closely in fostering some further orderly appreciation of the main nondollar currencies."

In the 10 months since the G-5 meeting, the yen has appreciated by more than 38% vis-a-vis the dollar; the French franc by more than 18%; the West German mark by more than 25%; and the British pound by approximately 10%.

Other Survey Findings

- In the listing of the top 500 banks excluding holding companies, Dai-Ichi Kangyo Bank maintained its No. 1 ranking for the third year in a row, with assets of $158.3 billion on Sept. 30. Dai-Ichi Kangyo Bank became the top bank in the world in deposits in 1984, and its holding company became the top firm in assets in 1986.
- Although the top U.S. bank, Citibank, Citicorp's subsidiary, ranked fifth among banks in the world with assets of $129.5 billion on Dec. 31.
- The total assets of the top 500 world banks rose 21.7% last year to $8.64 trillion on Dec. 31, 1985, from $7.1 trillion a year earlier. In 1984, the assets of the top 500 banks rose by only 3.8%.
- The 386 foreign banks ranked among the top 500 posted a 24.6% gain in assets to $7.25 trillion on Dec. 31, and the 114 U.S. banks had a 9.2% gain to $1.39 trillion. In 1984, foreign banks' assets rose by only 2.3%, and U.S. banks had a gain of 10.8%.
- There was one newcomer among the top 10 world banks. Norinchukin Bank, Tokyo, moved up three places in rank to 10th place with assets of $106.3 billion, up 28.5% from the year before. Bank of America, San Francisco, fell to 13th place with assets of $102.6 billion at yearend 1985, compared with $100.3 billion a year earlier when it ranked sixth.
- Among the top five banking companies, there was one newcomer. Mitsubishi Bank Ltd., Tokyo, moved into fifth place with assets of $133.5 billion on Sept. 30, 1985, up 21% from $110.2 billion a year earlier when it ranked sixth. BankAmerica Corp., the

World's Top 500: Page 47 ➙

Dear Reader, How Are We Doing?

The American Banker wants very much to make sure its coverage of the financial services industry meets your information needs. So would you spend a moment to give us some feedback on the statistical tables that appear in today's survey of the world's top 500 banks ranked by assets? Over the past year we have incorporated many of your suggestions to provide more meaningful information. Please return this questionnaire to L. Michael Cacace, Statistical Chief, American Banker, One State Street Plaza, New York, N.Y. 10004. Telephone 212-943-4836.

Attention bank lawyers, bank executives and creditors:
Here's the only reference you need to address *all* your standby and commercial letter of credit problems

The Law of Letters of Credit
by John F. Dolan

Provides complete text and analysis of ICC Publication #400 – International Chamber of Commerce Uniform Customs and Practice for Documentary Credit Operations, 1983 Revision!

Issuing commercial and standby letters of credit has become more difficult than ever before. Transactions can easily be affected by Article 5 of the UCC, The Uniform Customs and Practice for Documentary Credits, and judicial applications of common law equity or contract principles.

Until now, no single book covered all these elements of the law of letters of credit.

But now, for the first time there is a treatise that integrates Article 5 of the UCC with the Uniform Customs, plus all relevant case law. It eliminates exhaustive searches by consolidating vital information from various sources into one, easy-to-use volume.

The Law of Letters of Credit gives you immediate access to business and legal answers related to commercial transactions and helps you whether you're planning, setting up, using, analyzing, or litigating letters of credit.

Includes model letter-of-credit documents – making your job even easier!

Aggressive Philosophy, Stronger Yen Spur Dai-Ichi's Push to Top

By GORDON MATTHEWS

NEW YORK — The rapid asset growth in recent years of Dai-Ichi Kangyo Bank Ltd. and other major Japanese banks has happened mostly because they are the aggressive banking representatives of the world's leading capital-generating nation.

At bottom is a difference in philosophy that characterizes Japanese business generally. The Japanese banks focus on gaining a larger share of the banking market, an effort that shows up in large increases of size, while the major American and European banks concentrate on profitability and more deliberate growth.

Another significant factor in Dai-Ichi Kangyo's surge past Citicorp to become the world's largest banking company this spring was the sharp rise of the yen against the dollar. The value of the Japanese currency soared 21.9% in the six months from last Sept. 30, when it tallied assets of $158.3 billion, to March 31, when it posted assets of $207.2 billion, surpassing the $175.9 billion in assets listed by Citicorp on the same date.

Dai-Ichi Kangyo's assets have grown 161% since 1980, versus a 60% gain for Citicorp.

The Japanese emphasis is on volume, said banking analyst Virginia A. Adair, vice president of Dean Witter Reynolds Inc. "You go in there, you get the business at any price, you get the [customer] relationship under your belt and then you hang onto it." Initial narrow margins or even losses up-front are less important than establishing this link.

And the Japanese banks operate under relatively fewer capital and other restrictions in a country with a large and growing economic and financial base. Japan's unusually high savings rate and huge earnings from global trade provide fertile ground for banking growth.

"Nearly 70% of total Japanese bank activity is from the domestic market. That is where deposits and profits are coming from," Nobuya Hagura, president of Dai-Ichi Kangyo, said in a recent interview. Last year the bank's deposits per domestic branch, at an average of $180 million, were about twice the level of five years earlier.

The aim of Dai-Ichi Kangyo itself is clear. "Our goal is to become the world's largest and strongest comprehensive financial service institution," said Mr. Hagura and the bank's chairman, Tetuso Fujimori, in the bank's latest annual report.

In the near future, they said, the bank plans to "develop a wider range of products and services and enter new fields of business to meet the increasingly diverse and complex requirements of its customers; expand its overseas network, more closely monitor the business environment for new opportunities, and strengthen its financial activities worldwide; and further apply electronics in its administrative and service sectors to benefit from emerging new technologies."

Dai-Ichi Kangyo was formed in 1971 by the merger of the Dai-Ichi Bank and the Nippon Kangyo Bank. Many of its management efforts in the past 15 years have stemmed from the combination, a scenario that is probably familiar to bankers in this country who have been part of mergers.

"The task of making one company out of two has not been easy," the Tokyo bank has said. Last year, it said the long effort at amalgamation was "essentially complete."

Among other things, the bank has had to retrain and reassign personnel and rationalize its domestic branch system by closing duplicate branches in areas where the two premerger banks once both had offices. Currently, the bank has 351 branch offices in Japan.

Meanwhile, the bank has also been

➻ Continued from Page 45

parent company of Bank of America, fell to ninth position with assets of $114.8 billion on Dec. 31, compared with $113.7 billion the year before when it ranked fourth.

- A country breakdown of the top 500 banks finds that the 93 Japanese banks had the largest amount of assets, $2.58 trillion, up 26.3% from the previous year. The 114 U.S. banks were second with $1.39 trillion. West Germany's 38 banks were third with $749.9 billion, a gain of 39.5% from the $537.7 billion held by 33 German banks ranked among the top 500 banks in 1984. France was fourth with $654.2 billion, an increase of 26.4%. Italy was fifth with $494.5 billion, an increase of 40.2% from the previous year.
- Among the top 500 world banks, 274 banks improved their ranking from the previous year, compared with 256 banks that moved up in the ranks in 1984. The largest gain in rank among the 100 largest world banks was scored by Banco di Santo Spirito, Rome, which rose 79 places to 88th. The increase can be attributed, in part, to the 16.3% increase in the value of the lira.
- The largest gainer among the second hundred world banks was Nuovo Banco Ambrosiano, Milan. It rose 260 places to 185th. The gain is attributable to its merger with La Centrale Finaziaria Generale on October 27, 1985.
- The bank with the largest gain in rank among the third hundred banks was Bergen Bank, Bergen, Norway. The bank moved up 145 places in rank to 294th position. The gain is attributable to the reporting of consolidated figures for 1985.
- The largest gainer among the fourth hundred was scored by Danske Provinsbank, Aarhus, Denmark, rising 193 places to 394th rank. The gain is due to the 27.3% appreciation of the krone, the deregulation of the banking industry in Denmark last year, and changes in accounting principles.
- Union Bank of Norway, Oslo, scored the largest gain in rank among the fifth hundred largest world banks, rising 452 places to 444th position.
- The number of banking companies in the the world with $25 billion or more on Dec. 31, rose to 97 in 1985, from 86 in 1984. The largest newcomer to the listing was Zenshinren Bank, Tokyo. It ranked 82d with assets of $32.1 billion on Sept. 30, 1985, up 38.4% from $23.2 billion in 1984. ■

...affordable, comprehensive, *and* quarterly...

Depository Institutions Performance Directory
by Lyons, Zomback & Ostrowski, Inc.

This valuable directory, packed with vital data, analysis and commentary, helps you monitor the financial health of every FDIC- or FSLIC-insured depository institution in the country – including commercial banks, savings and loan associations, savings banks, and bank holding companies.

For every insured institution, the **Directory** gives you the latest quarterly figures from the Federal Reserve Board, *plus* the past three years' data on:

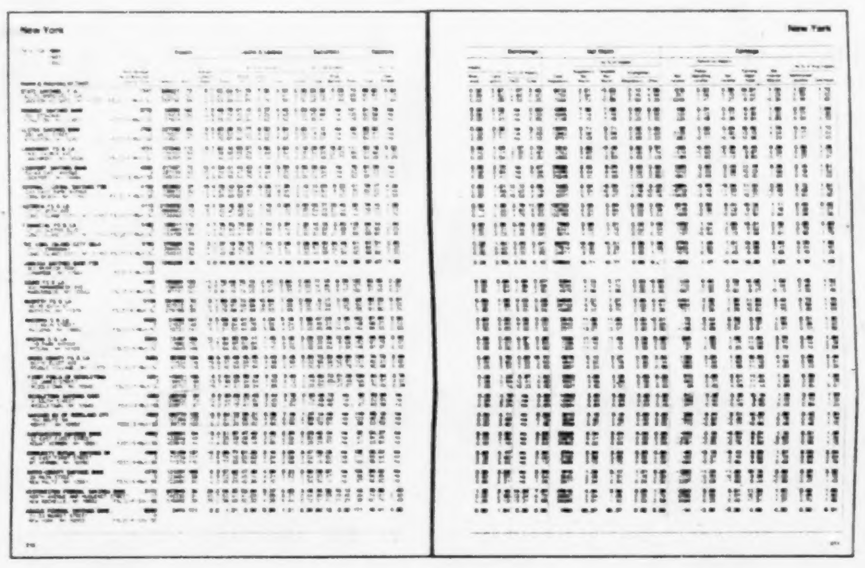
Profitability
☐ Return on Assets
☐ Earning Asset Yields and Net Interest Margins
☐ Non-Interest Income and Overhead Levels

Capital Adequacy
☐ Regulatory Capital Ratios
☐ Intangible Asset Levels

Commercial Bank Asset Quality
☐ Net Charge-Offs
☐ Sub-Quality Assets and Reserve Levels

Size and Growth
☐ Asset and Deposit Rankings and Growth Rates

Balance Sheet Structure
☐ Commercial, Real Estate, and Consumer Loan Levels
☐ Deposit Levels and Dependence on Large Denomination Deposits



Asset and Deposit Rankings

PRICE: $295.00 3 Volume Set

The thorough peer group coverage in the **Directory** allows you to evaluate your institution's performance by comparing it *directly* to that of competitive institutions. You discover firsthand what kinds of services the competition is offering... how well a particular management strategy worked last year... what types of deposits are being taken in... what kinds of loans are being offered... how many branches an institution has... and more. Best of all, this vital information is completely updated *every quarter*.

Successful bank strategies are what count. You can improve your bottom line, as long as you have all the available information. And it's all here in **Depository Institutions Performance Directory**.

Banking Panel Republicans Challenge St Germain

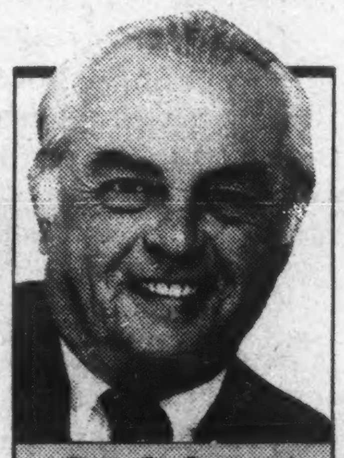
Launch Parliamentary Maneuver to Force Committee Vote on Emergency Bills

By BARTLETT NAYLOR

WASHINGTON — Frustrated by inaction, Republicans on the House Banking Committee on Thursday began a provocative parliamentary maneuver to pressure Democratic chairman Rep. Fernand J. St Germain, D-R.I., to schedule a vote by the full committee on emergency banking legislation.

Most of the Republican members of the committee signed a letter asking Mr. St Germain to bring four bills up for committee consideration. Three of the pending bills would recapitalize the Federal Savings and Loan Insurance Corp.; expand emergency interstate takeovers, and improve the pay and training of regulators. The other bill is a housing measure.

"We believe there are several critical issues that must be addressed before Congress adjourns," the Republicans wrote in the one-page letter to Mr. St Germain.



F. J. St Germain

Under the rules of the committee, Mr. St Germain has 10 legislative days from when he receives the letter to call a vote on the bills. If he does not, then a majority of the 49-member committee can "discharge" — that is, override — the chairman's authority to control the committee agenda.

The letter is unprecedented in Mr. St Germain's tenure and reflects in part the growing willingness of Republican committee members to challenge the chairman's power.

"It's a bold move," said one lobbyist.

Four hours after the letter first began circulating, 15 of the 19 Republicans on the committee had signed it. Rep. Stewart McKinney, R-Conn., said he would not sign it, but committee staffers predicted he would be the only holdout. To initiate the process, only three signatures are required.

A majority is required only if Mr. St Germain declines to call the vote.

Rep. Chalmers P. Wylie, R-Ohio, the ranking minority member, and Rep. Stan Parris, R-Va., are spearheading

AN AMERICAN BANKER SPECIAL REPORT

Eliminating Consumer Write-offs Will Boost Auto Leasing

By ROBERT M. GARSSON

Automobile ownership has always been a source of pride in America. But if Senate tax writers have their way, more Americans than ever may find themselves renting rather than owning their wheels.

The recently passed Senate bill, now the subject of the debate before the House-Senate conference committee, proposes to end two key deductions that have affected the economics of buying a car. The first allows a federal income tax deduction for the often-substantial state sales taxes paid on a new car, and the second provides a similar write-off for interest paid on consumer loans.

For taxpayers who itemize, especially for those in higher tax brackets, those deductions are significant. The sales tax may run from $600 to $1,000 on today's average car, and the interest payments can total $3,000 or more over a four-year period, depending upon how much is borrowed.

With those tax breaks gone, "leasing will just explode," says Robert Reich, president of Marine Midland Automotive Financial Services, Buffalo, N.Y.

"In the past few months, leasing has begun to accelerate just in anticipation of tax reform," adds Mr. Reich.

The conference committee has yet to reach any final decisions, and it is possible the Senate conferees could accept the more liberal interest deductions contained in the House-passed bill. The House had proposed to permit consumers to deduct interest up to $20,000 plus an amount equal to investment income.

Moreover, both chambers want to end the investment tax credit, a major

Leasing: Page 15 ➳

Tax reform legislation promises to bring about major changes in consumer investment and borrowing patterns. It will also alter corporate investment decisions and radically restructure large areas of real estate finance. The result: new opportunities for financial services companies that can meet the changing needs of retail and commercial customers. This article is the third in a series of occasional reports on those new opportunities.

Alchemists of Image Convert Virginia Bank to Signet, First National Bank of St. Louis to a Stylish Centerre

By JEFFREY KUTLER

NEW YORK — When Bank of Virginia Co. changed its name last month, it ran advertisements in financial newspapers showing the word "Signet" being chiseled in stone.

Into that symbolism — suggesting strength and permanence — went a year of research and creative work by the new Signet Banking Corp. and its "identity consultant," Anspach Grossman Portugal Inc. of New York.

The name Bank of Virginia no longer worked for an aspiring, $8.5 billion-asset superregional that includes the Union Trust Bancorp., Baltimore, and the pending acquisition of the Security National Bank, Washington, D.C. Bank officials and consultants assessed their markets, strategies, and competitive factors. They sought a name that would be brief, easily pronounced, unlimited by geography, positive in connotation, and emblematic of quality.

Out of 700 potential names emerged Signet, "a strong word with a traditional tone [that] makes good sense for our region of the country," said Frederick Deane Jr., the chairman of the Richmond, Va.-based banking company.

Bank of Virginia

OUT WITH THE OLD: Bank of Virginia's old logo, a stylized pattern of V's, was unsuitable for its new identity.

It is a scenario that has been played out hundreds of times in response to recent upheavals in the financial services industry. Name changing and image enhancing have become so prevalent that they are altering the landscape of the industry almost as much as the new competition and deregulation they are meant to reflect.

They have brought a bonanza to companies like Anspach Grossman Portugal, one of the premier corporate image makers. Like all consultants in this busy field, Anspach Grossman Portugal traces its lineage back to the late Walter P. Margulies, the originator of the corporate identity consulting specialty and also the founder of Lippincott & Margulies.

Lippincott & Margulies, widely regarded as the blue-chip corporate identity consultant, counts among its clients the American Express Co., Amtrak, the Chrysler Corp., and the Xerox Corp., plus the newly named Nynex (for the regional Bell telephone company in the Northeast) and Hartmarx (formerly Hart Schaffner & Marx).

Anspach Grossman Portugal, another closely held company with the aura of a prestigious advertising agency or management consultant, counts among its clients Beatrice Cos., Texaco Inc., the Quaker Oats Co., and the Woodward & Lothrop department store. It has done especially well in the banking industry, which has been replete with mergers and acquisitions.

Worked with Citicorp on Logo

Anspach Grossman Portugal played a key role in the streamlining of Citicorp and Citibank's logotype in the 1970s. It also came up with several names that broke the old banking mold: the Centerre Bancorp. for the former First National Bank in St. Louis, CoreStates for the Philadelphia National Corp., Norstar for the United Bank of New York, and now Signet.

Indeed, banking seems to be where the money is.

In 1985, 409 commercial banks and other financial service companies changed their names, according to data compiled by Anspach Grossman Portugal. The total was up from 379 in 1984 and accounted for 39% of 1,041 corporate name changes in 1985.

Of 430 name changes motivated by 1985 mergers, acquisitions, and divestitures, fully three-fourths involved financial service firms. More than 100 were attributed either to the Ohio savings and loan crisis or to transactions assisted by the federal deposit insurance agencies.

The pace slowed in the first half of this year, when 129 banks and thrift institutions, and 79 other financial organizations, changed their names, Anspach Grossman Portugal revealed. However, the company said, the financial sector is likely to lead all others in name changes for the 12th consecutive year.

"Banking is taking a breather," said Russell Anspach, who, with the firm's other principals, decided to break away from Lippincott and start Anspach Grossman Portugal in 1969. The firm has more than 40 people on its staff and has 12 to 15 projects going at any given time, Mr. Anspach said.

"We know many banks that needed to change have already done so. Others, we speculate, are waiting for a clearer regulatory picture to emerge, or are hoping to be acquired, or are still working on a strategy," he added.

Meanwhile, activity is accelerating outside the banking field, where divestitures and restructurings are at record levels. Libbey-Owens-Ford scaled down to become Trinova, an identity for which AGP takes credit. International Harvester, likewise, became Navistar. Caterpillar Tractor simplified itself as Caterpillar Inc. Armour-Dial Inc. is simply Dial Inc. The New England Mutual Life Insurance Co. became The New England. And Phibro-Salomon Inc. is now just Salomon Inc.

SIGNET

Signet Banking Corporation

IN WITH THE NEW: Signet's new logo is neutral and easily applied to the members of the expanding superregional holding company's empire.

"We are in the middle of one of the most interesting years our profession has experienced," Mr. Anspach said. "The patterns we see in name changing directly reflect many managers' efforts to get back to basics, to simplify and reorganize and restructure, while others continue to merge and acquire."

Anspach Grossman Portugal combines advertising, artistic, psychological, management consulting, and various other skills to help clients alter their corporate or brand images.

Otto L. "Tony" Spaeth Jr., an Anspach Grossman Portugal principal and a former marketer at Citicorp, said that many banks face problems "not ascribable to current conditions but to the way they behaved in the past." Fortunately for them and the identity consulting business, "banks now have business options that translate into identity options."

Mr. Spaeth said Anspach Grossman Portugal's experts are careful to let their banking clients set strategy before embarking on an image or name change, though the consultants can be catalysts for decision making.

Mr. Anspach added: "We need to be able to tell it like it is to bank managements, which could get in the way of a long-term relationship like a McKinsey & Co. [management consultants] or an ad agency might want to have. But that's the nature of what we do."

He claimed that any tensions or conflicts usually work out for the better.

"Sometimes our best recommendation isn't going to be accepted for political or cultural reasons, and then we talk about tradeoffs," Mr. Anspach said. "It may cost a company more to settle for solution number two, but they come to understand the factors involved and it is all right with them."

In any event, when Anspach Grossman Portugal completes its job, it leaves behind what a client needs to assert its new identity without having to call on the outside consultants. Anspach Grossman Portugal realizes that not all banks have the in-house marketing and advertising resources of Citibank, and designs identity programs with this is mind, Mr. Spaeth said.

Corporate Name Changes on the Rise

Source: Anspach Grossman Portugal

He said banks wishing to "enter the future" must face three sets of identity issues: their names, which in the past tended to be arbitrary, legally and functionally limited; relationships of parts, such as product names, to the whole; and the design of logos and related materials.

If any Anspach Grossman Portugal assignment turned heads, it was Centerre, the $5.1 billion-asset St. Louis holding company, that dropped the old First Union Bancorp. and First National Bank in St. Louis names in 1982.

Centerre Broke Tradition

"Centerre was one of our more sophisticated recommendations, and it came as some surprise when it was accepted," Mr. Anspach recalled.

"A lot of people didn't like it," he went on. "They said, 'It's too different. It's not banklike or straightforward enough. It sounds French.' "

Mr. Anspach said he admires top management, led by C.C. Barksdale, Centerre's chief executive officer, for daring to make the break.

Mr. Spaeth added: "If a name is going to be effective, it probably should seem a little startling. Barksdale was a mover, which made the name credible."

Since Centerre's move, as banks, airlines, and telephone companies all began to sound alike, Bank of Virginia's adoption of Signet seems almost mundane, but it was a departure nonetheless.

As Mr. Spaeth explained it, during the last few years Virginia became an important battleground within the southeastern regional banking zone. Bank of Virginia's rival, the former Virginia National Bank, already had become a superregional called the Sovran Financial Corp.

"Bank of Virginia expected to become an interstate holding company with separate banks. We said, why not anticipate that by way of a new name and corporate identity," Mr. Spaeth recalled.

As the process that led to Signet unfolded, Bank of Virginia Co. acquired Union Trust in a "merger of equals." The holding company announced that its banks would retain their local identities under a holding company umbrella.

To name that umbrella, "we looked for heritage names relating to geography or history, which are very prominent in that part of the country, but nothing came up that was available," Mr. Spaeth said. "This steered us to a truly neutral name."

He added: "Neutral names — real names or ones that sound real — are desirable for consumer-oriented organizations. Signet has real meaning, as a sign or endorsement, and it has a touch of tradition which fits in with Virginia's tremendous sense of history."

> 'The patterns we see in name changing directly reflect many managers' efforts to get back to basics, to simplify and reorganize and restructure, while others continue to merge and acquire.'
>
> — **Russell Anspach**

Signet Banking Corp. executives are so pleased that they will rename their subsidiary banks Signet at the end of the first quarter in 1987. Implementation will be comprehensive, ranging from signs and stationery to the New York Stock Exchange symbol SBK, which already has replaced BKV.

Except for a few bank card industry veterans, no one remembers that Signet was the name of an ill-fated debit card service that MasterCard tried to introduce in the mid-1970s.

To most of the world, Signet is the name of a Virginia-based, interstate bank holding company. It is now carved in stone. ■

Credit Card Business Mushrooms at Large Banks

Plastic Serves as Vehicle For Out-of-State Lending

By MICHAEL WEINSTEIN

NEW YORK — The credit card business is booming at many of the nation's biggest banks.

Attracted by high profits and strong demand, banks have mailed tens of thousands of credit cards during the last two years. In the process, the credit card portfolios at many banks have evolved into vehicles for out-of-state, and even nationwide, consumer lending.

THE CREDIT CARD BOOM

FIRST IN A SERIES

A recent survey of bank credit card operations by the *American Banker* documents the shift to out-of-state business and other developments affecting bank credit cards.

Earlier this year, 130 questionnaires were mailed to the top financial institutions, and 77 responses were received by mail or follow-up telephone calls from January through early July.

AN **American Banker** SPECIAL REPORT

About one-third of the responding banks had at least 30% of their cardholder accounts outside their home states in 1985, according to the survey. In 1981, only 12% of the respondents had opened that many accounts out of state.

"What it's doing is providing one more means of eroding the branch as the primary point of contact," observed Joel P. Friedman, the director of strategic management at the accounting firm of Arthur Andersen & Co., San Francisco.

Some banks have used credit cards as a way to establish financial relationships with out-of-state consumers, who

Filibuster Threatened as Senate Panel Approves Bill Sought by Regulators

By JAY ROSENSTEIN
and BARTLETT NAYLOR

WASHINGTON — As expected, the Senate Banking Committee on Wednesday approved legislation aimed at helping regulators assist problem institutions, but key members of Congress threaten to derail this measure because of other disputes.

The legislation approved by the committee includes provisions that would authorize federal regulators to merge failing institutions with out-of-state purchasers and provide for a recapitalization of the Federal Savings and Loan Insurance Corp.

But Sen. William Proxmire of Wisconsin, the ranking Democrat on the committee, threatened Wednesday to filibuster the bill when it reaches the Senate floor.

And it is unclear under what circumstances Rep. Fernand J. St Germain, D-R.I., the powerful chairman of the House Banking Committee, will agree to consider the Senate legislation. Both Mr. Proxmire and Mr. St Germain are insisting that both houses of Congress act simultaneously on legislation that would shut down limited-purpose "nonbank banks."

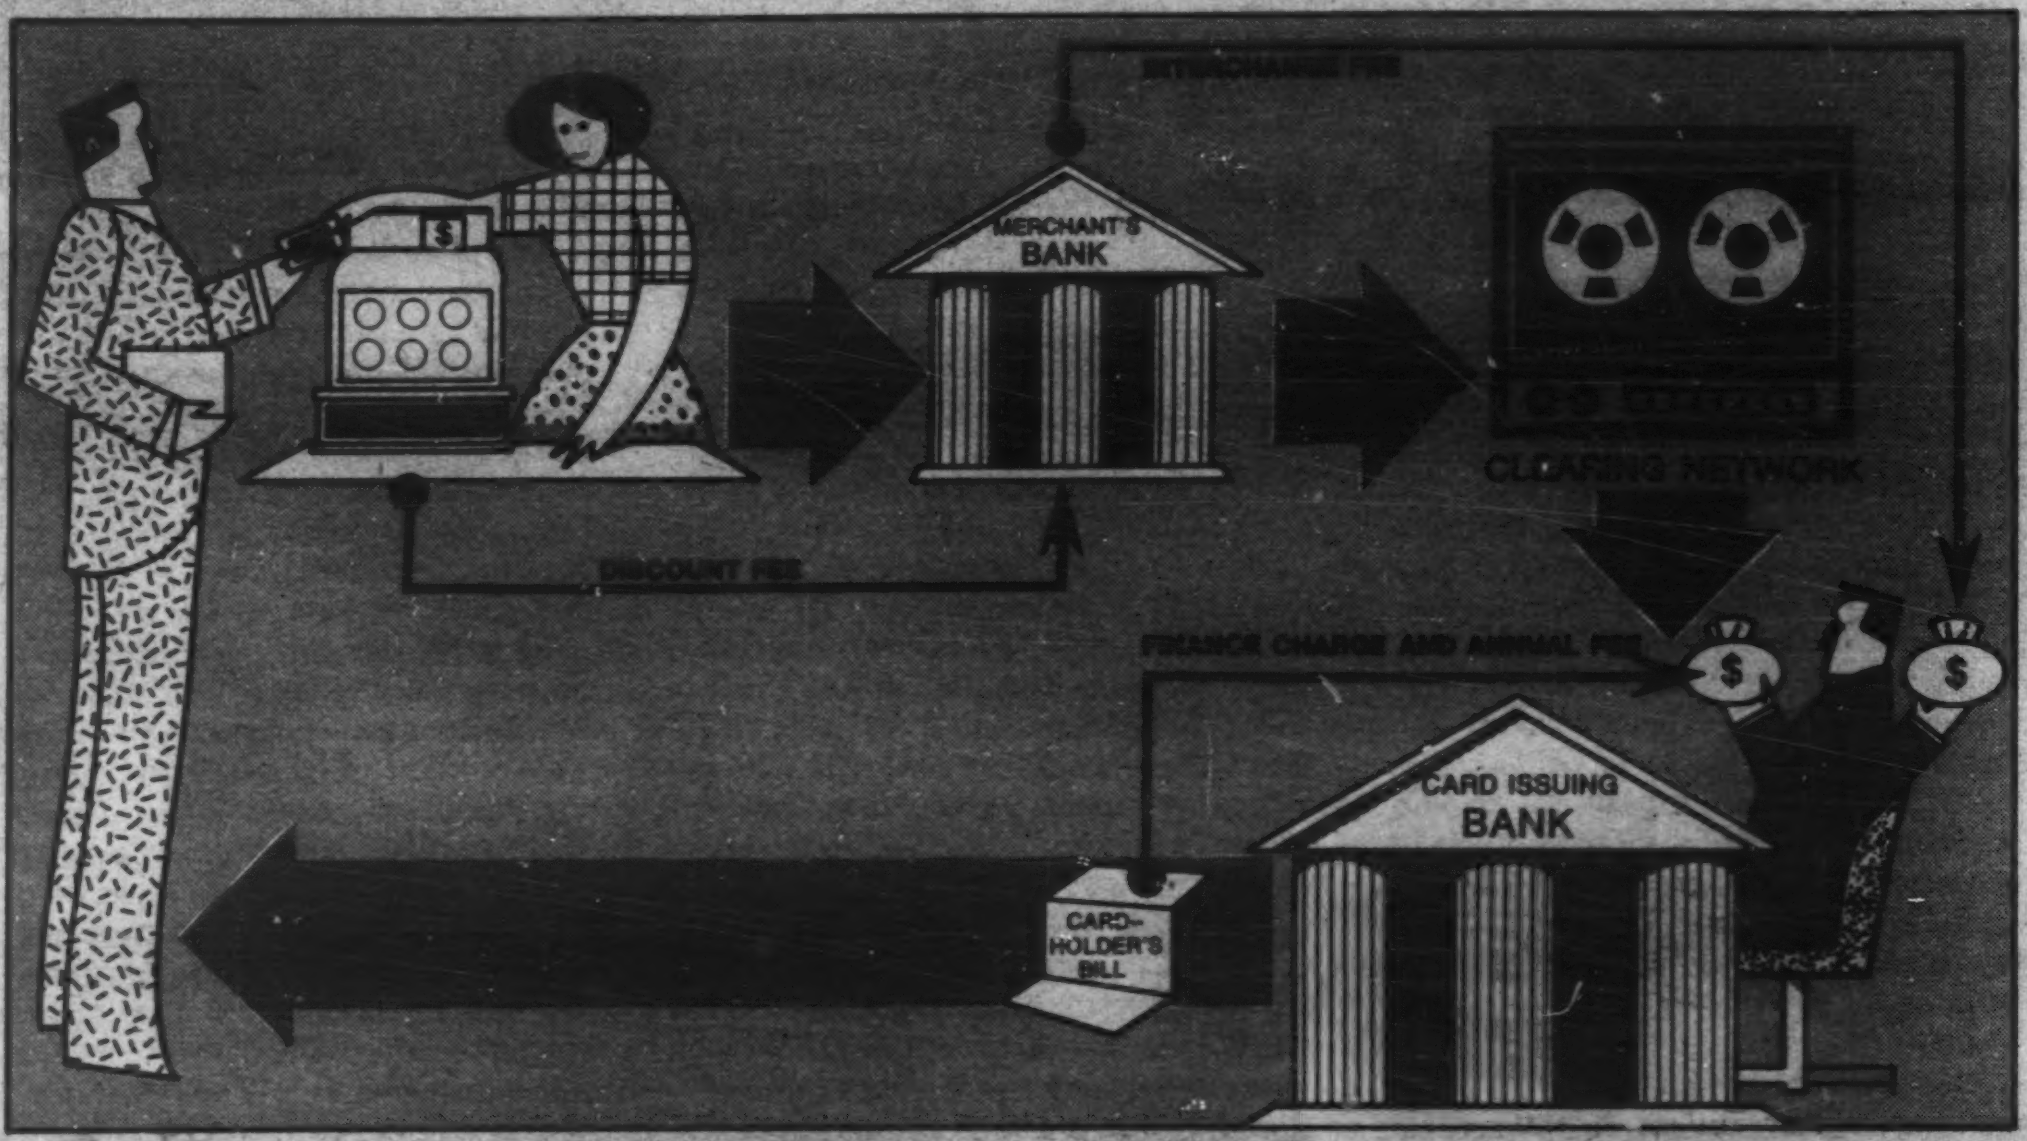
Fat Profits Inspire Credit Card Boom At Top Institutions

The Path of a Credit Card Transaction



A credit card transaction, shown by the wide arrows, begins in the store. After the customer pays with his credit card, the merchant deposits the sales slip at its bank. The merchant's bank sends the transaction to a clearing network, which routes the data to a card-issuing bank. The card-issuing bank bills the customer. The flow of fees, shown by the narrow arrows, benefits primarily the card-issuing bank. This bank collects an annual fee and interest charges from each cardholder. It also earns an "interchange fee" for each transaction from the merchant's bank. The merchant's bank collects a "discount" fee from its merchants for each transaction.

Continued from Page 1

are difficult to reach since banks face legal obstacles in opening branches outside their home states.

These institutions hope to sell a wider range of financial products to credit card customers, Mr. Friedman said. "I think it's part of a broader strategic vision," he added.

Other banks, however, have expanded portfolios simply to increase credit card business, which has become increasingly profitable in recent years. "It's a quest for growth because of the profitability of the business," said Donald J. Auriemma, a Garden City, N.Y.-based consultant.

THE CREDIT CARD BOOM
FIRST IN A SERIES

The credit card business has been earning a return on assets of 4% or 5%, considerably higher than other banking products.

Randolph W. Wyckoff, senior vice president at the Bank of Virginia, Richmond, said he expected growth to continue because bad loans already are lodged in portfolios. If loan volume re[illegible], then, as these bad loans [illegible] loan losses will become a larger percentage of the portfolios, he explained.

"You've got to go to the world, to the United States, or to the state next door," Mr. Wyckoff said. "It's tough to stop growing."

How banks process credit card accounts...

30	*Completely in-house*
17	*Partially in-house*
24	*By a for-profit 3rd party*
5	*By a cooperative*

Card Issuing Produces High Profits

Almost 90% of credit card revenues and a large percentage of profits come from the card-issuing side of the business — putting cards in the hands of consumers. Also, about 75% of card-issuing revenues comes from interest income, which the banks earn by charging, in most cases, 18% to 20% on outstanding card balances.

Bank card rates have remained at these levels for years while market interest rates have been dropping for the last few years, prompting consumer advocates and politicians to clamor for lower credit card rates. And some industry experts say they expect competition to force banks to cut rates.

Nevertheless, the *American Banker* survey found that most banks — 86% of those responding to the survey — have no intention of changing their credit card interest rates during the next year.

The remaining 25% of card-issuing revenues comes primarily from annual fees and "interchange" fees, in roughly equal amounts.

Most banks are charging consumers $15 to $20 a year for standard credit cards and $35 to $45 a year for premium cards.

The interchange fee is paid by the merchant bank to the card-issuing bank for each transaction. The fee, established in the 1960s to compensate card issuers for the cost and risk of issuing cards, now amounts to about 1.5% of the transaction amount.

The largest expense is the cost of funds, followed by operating costs, which vary significantly from bank to bank.

A credit card operation includes high fixed costs. The computers and processing equipment incur similar expenses no matter how many credit card transactions are handled. Therefore, a larger number of transactions means a lower per-transaction cost.

Small banks often use outside data processors, which are considered more [illegible] than in-house operations [illegible]

The *American Banker* survey found that about 40% of the top credit card banks handle their credit card processing entirely in-house. Another 22% perform this function partially in-house. The balance — about 38% — use an outside operation, according to the survey.

The merchant side of the business provides a relatively small portion of the card operation's revenues — 10% to 12% — but it is an intensely competitive business.

Banks charge merchants a discount fee, which is a percentage of the credit card sale — usually 2% to 4%. Thus, if a merchant pays a 2% discount and deposits a $100 sales slip at the bank, the merchant gets credit for $98.

The services provided to merchants include access to the credit card system for settlement and authorization of credit card transactions. Many banks also provide electronic, card-reading terminals at merchant checkout counters that support the electronic settlement of bank card transactions.

This procedure, known as data capture, eliminates the need for merchants to deposit sales slips at the bank to gain credit for the transaction. Instead, the terminal automatically transmits the necessary information, and the merchant is credited at the end of the day.

79% of Top Banks Offer Data Capture

The *American Banker* survey discovered that 79% of the top banks are providing data capture to merchants.

Bank credit card operations also are confronting the germination of debit card programs. Once used exclusively in automated teller machines, debit cards now are being accepted by merchants for store purchases in dozens of programs around the country.

The debit card is similar operationally to the credit card. And 43% of the top banks have consolidated their credit and debit card operations, according to the *American Banker* survey.

Combining the two operations, however, is no simple matter. The debit card is tied to deposits rather than a line of credit, and deposits are a bank's lifeblood, observed Mr. Friedman of Arthur Andersen.

"It's far more widespread in terms of its impact on the bank," he said. "It's a very emotional issue, one that seems to defy rational analysis."

Next: Most banks have no plans to change the interest rate on credit cards, but there is substantial interest in variable-rate cards.

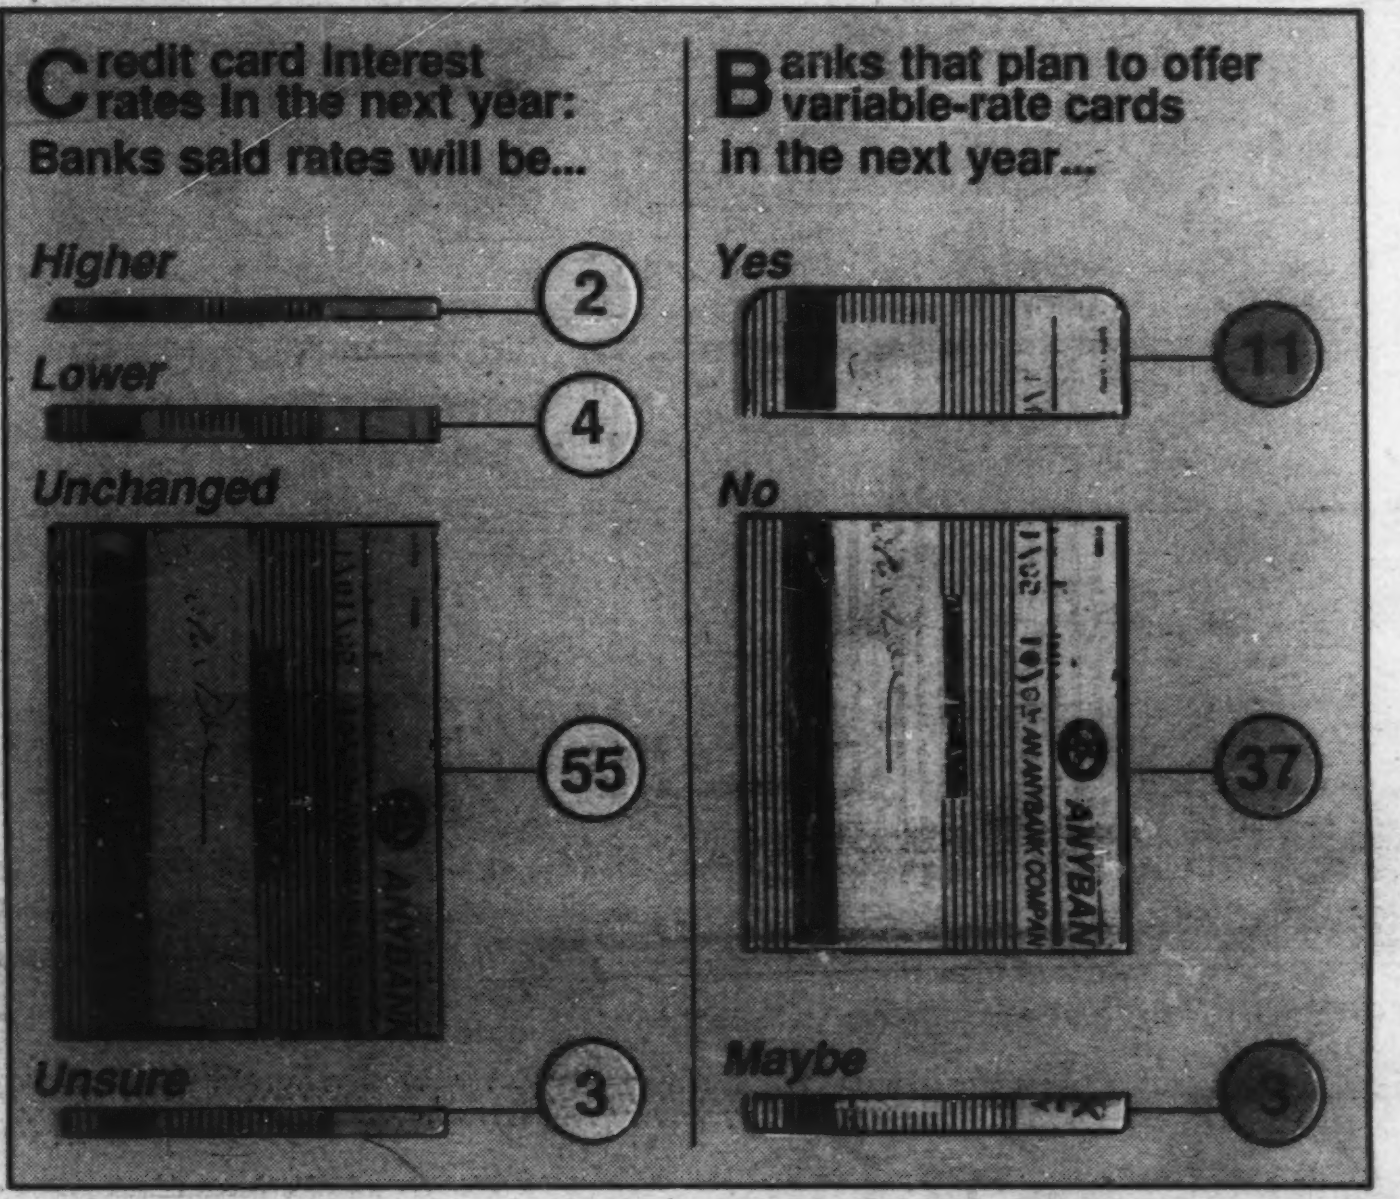
Most Banks Plan No Cuts in Credit Card Rates



But Some Evince Interest In Variable-Rate Accounts

By MICHAEL WEINSTEIN

NEW YORK — Most of the market leaders in the bank credit card business have no plans during the next year to lower credit card interest rates, but there is considerable interest in variable-rate cards, according to a recent *American Banker* survey of major financial institutions.

THE CREDIT CARD BOOM
SECOND IN A SERIES

Of the top card-issuing banks responding to the survey, 86% said they did not intend to change credit card rates, even though consumer groups and politicians have been pressing for them.

(In Washington Thursday Rep. Charles Schumer, D-N.Y., unveiled a list of banks that have lowered their credit card rates. See page 16.)

Questionnaires were mailed to 130 financial institutions earlier this year, and 77 responses were received by mail or follow-up telephone calls from January through early July.

AN American Banker SPECIAL REPORT

"I think the bankers are resisting the temptation to engage in a gasoline industry-type price war," said Joel P. Friedman, the director of strategic management at the accounting firm of Arthur Andersen & Co., San Francisco.

"That doesn't surprise me," said Stephen Brobeck, the executive director of the Washington-based Consumer Federation of America. "The marketplace has shown little sensitivity to interest-rate variation on credit cards."

While some bankers admitted that consumer sensitivity to credit card interest rates had increased in the last

BIG DEALS: In-State Prices Rise

Premiums Approach Those in Interstate Acquisitions

By BART FRAUST

NEW YORK — The passage of interstate banking laws by several states is slowly erasing the differential between prices paid for in-state bank acquisitions and prices paid for interstate deals.

AN American Banker MONTHLY FEATURE

For the first year following the U.S. Supreme Court's decision upholding regional banking, interstate deals generally were priced at higher multiples to equity and earnings than in-state mergers.

Now, there are indications that in states that have interstate banking laws, in-state deals are becoming just as costly as interstate acquisitions.

"When there are out-of-state alternatives, in-state premiums will rise and there won't be the differential anymore," said Lacy Shockley, a bank stock analyst for Mabon, Nugent & Co., New York.

Ms. Shockley's statement is borne out in July's data for bank merger and acquisition activity.

In-state acquisitions announced last

Biggest Banks Remain Firm on Credit Card Rates Despite Scattered Cuts by Small, Mid-Size Issuers

➵ Continued from Page 1

few months, they also said they thought that banks would be able to keep rates about where they are.

"It's a banker's natural reaction not to lower rates when losses are going up," added Donald J. Auriemma, a consultant based in Garden City, N.Y. Bad-debt losses on credit card loans increased from 1.9% of outstandings in 1984 to 3.3% last year, according to Visa U.S.A. Inc.

THE CREDIT CARD BOOM

SECOND IN A SERIES

"For the most part, credit card rates haven't changed in 15 years," observed Randolph W. Wyckoff, senior vice president at the Bank of Virginia, Richmond. In most cases, credit card rates remain between 18% and 20%.

The insistence on maintaining these rates may put bankers at odds with some Washington politicians, who have proposed federal legislation that would put a limit on credit card interest rates and would mandate additional disclosure of fees and interest rates.

"That's like asking Attila the Hun if he's going to stop beating people over the head," remarked Curtis Prins, the staff director of the House Banking Committee's consumer affairs and coinage subcommittee, when told of the survey results.

There has been scattered price cutting in the last year or so. A number of small and medium-size issuers have lowered the interest rates on credit cards, and some of them have made significant cuts.

"I think we're seeing some irrational price cutting," said Mr. Friedman, referring to banks that have reduced credit card rates to 14% or 15%. "They'll cut their margins so thin — then if any economic conditions become unfavorable, they'll be in a loss position."

Top Banks Resist Rate Cuts

However, the top dozen or so banks, which set the pace for the industry, generally have resisted rate cuts.

The lone exception, Manufacturers Hanover Trust Co., lowered its rate last October from 19.8% to 17.8%. Since then, the bank says, it has attracted nearly a million new accounts.

"The industry is led by the top dozen, and the top dozen have decided not to take the hit to the bottom line," Mr. Auriemma said.

Other big credit card banks have taken a different tack.

The Marine Midland Bank recently announced a variable-rate card with a lower rate than its fixed-rate card but a higher annual fee. Marine Midland will keep issuing its 19.8% fixed-rate card.

Banks levy these credit card fees on consumers...

45	*Delinquency fee*
27	*Lost card fee*
11	*Returned payment check fee*
10	*Overlimit fee*
9	*Cash advance fee*
3	*Statement copy fee*
1	*Extra card fee*

The Security Pacific National Bank, Los Angeles, said last month that it would offer lower interest rates depending on how many Security Pacific services are used by the cardholder. Rates are tiered from 16% to 20.4%.

And Wells Fargo Bank in San Francisco is lowering its credit card rate from 20% to 17% for customers who have held the bank's cards for at least five years and whose monthly purchases amount to at least $100.

"Things have changed since February," conceded one banker, who requested anonymity. "I agree there is a much greater sensitivity to interest rates on the part of the consumer than eight months ago."

Another banker said that rate-sensitive consumers are more aware than ever of card rates. However, he added, these customers are "still a small number."

According to the *American Banker* survey, 55 out of 64 financial institutions said they did not intend to change card rates. The four institutions that are planning to lower their rates are considering introducing a variable-rate credit card. The interest rate of a variable-rate card is related to, and moves in tandem with, a preselected market interest rate.

In fact, there is considerable interest in variable-rate cards. About one-quarter of the banks that do not now offer a variable-rate card are planning to offer or are considering offering one in the next year, according to the survey.

The Buffalo-based Manufacturers and Traders Trust Co., which now has a fixed-rate card at 19.8%, is introducing a variable-rate card in order to provide its customers with a more equitable rate and to protect itself against any future increases in interest rates, said Patricia M. Knab, a vice president with Manufacturers and Traders.

"If the prime hits 20% again, we're in negative numbers," she said, referring to high interest rates of the early 1980s when credit cards were money losers for banks.

Manufactures and Traders also is offering customers the option of a new fixed-rate card at 18%.

A southern bank is introducing a variable-rate premium card because it can offer a card with a lower-than-usual rate while retaining the flexibility to raise the finance charge if interest rates increase, according to an executive at the bank. The bank's standard card carries an 18% rate.

Variable Rates Catching On

"I think a bank's crazy not to at least be looking at it," she added. "More and more customers are getting accustomed to variable rates [in general]."

Mr. Auriemma, the consultant, said he expected that most variable-rate plans are for premium cards, which are generally more expensive and offer extra services and higher credit lines compared with standard cards. "It's a fairly intelligent positioning," he said, observing that the typical premium cardholder is more savvy about interest rates than ever before.

Banks that offer variable-rate cards...

Yes 19 *No* 55

"We may be forced into it either by legislation at the state or the federal level," said an executive at a mid-Atlantic bank that is considering a variable-rate card. "If we're not forced into it, we'd rather stay where we are." The bank now charges 18% annually on purchases made with its standard bank cards.

The survey also found that many banks impose a range of other fees on credit card customers. The most common fees are delinquency fees, assessed when the cardholder pays the bill late; over-limit fees, charged when cardholders exceed their credit limits; and fees, levied when the customer's check for payment of the credit card bill is returned.

Another part of the cardholder pricing mechanism is the grace period. Usually about a month long, it is the time during which purchases are charged to a customer's account but no interest accrues. Almost every bank responding to the survey offers some sort of grace period to its cardholders who pay off their outstanding balances by the end of the billing cycle.

Industry experts say about one-third of bank credit card customers pay their bills before the grace period ends. Thus, they avoid paying any interest to the bank and enjoy what amounts to an interest-free loan from the bank. These so-called convenience users bring down the actual yield of a portfolio below the interest rate that is charged on credit card loans.

However, only one bank out of 56 is even considering eliminating the grace period, according to the *American Banker* survey.

"There are very few banks in the country who have done that," commented Mr. Friedman of Arthur Andersen. Such a move, he added, would compel convenience users to abandon a bank's credit card.

Although convenience users are not as profitable as consumers who carry outstanding balances from month to month, they represent additional accounts that are being handled by the bank's processing operation. These fixed, back-office costs are lower on a per-account basis if they can be applied to a larger number of accounts.

"There's a great reluctance to drive away accounts," Mr. Friedman said.

Next: A ranking of the top banks handling merchant bank card transactions.

[illegible]

[illegible] are adjustable quarterly, but the standard card's rate has not moved since April 1985.

"We think it has given us the advantage of attracting the rollover customer," said Mr. Colby, referring to cardholders who carry outstanding balances from month to month instead of paying off the entire balance.

"That's the main equation in the profitability of the card," Mr. Colby said.

These cardholders generally account for about two-thirds of a bank's card portfolio, but at Bank of New York they represent "well over 80%," Mr. Colby said.

Interest income from credit cards in this year's first quarter has almost doubled over the same quarter a year before. The bank's call reports, which list interest income from credit cards and related plans, show income of $18.4 million in the first quarter of this year compared with [illegible]

High-Tech Card Service Lures Stores

By MICHAEL WEINSTEIN

NEW YORK — More than three-quarters of the nation's top credit card banks are offering a sophisticated, new technology to their merchant customers, a recent *American Banker* survey of major U.S financial institutions shows.

THE CREDIT CARD BOOM
THIRD IN A SERIES

The technology, known as data or draft capture, enables a merchant to get credit for bank card transactions without depositing paper sales slips at its bank.

Normally, merchants deposit credit card sales drafts together with cash at their local bank, or they mail the slips to their bank. Data capture technology moves this information over telephone lines to computers, so it is faster, more efficient, and often cheaper than the paper-based system.

[redacted]

Earlier this year, the newspaper mailed 130 questionnaires to the biggest financial institutions in the credit card business and 77 responses were received by mail or follow-up telephone calls from January through early July.

The newspaper's survey found that 79% of the responding banks — 57 of the 72 banks with merchant operations — offer data capture service. And more than one-half of the banks that do not offer data capture said they expect to do so within the next year.

"It kind of popped up rather quickly," said Donald J. Auriemma, a Garden City, N.Y., consultant. Mr. Aur-

Bank Board Ends Bid to Restrict Loans

By NINA EASTON

WASHINGTON — In the face of widespread industry opposition, the Federal Home Loan Bank Board has dropped a proposal that would have restricted the ability of thrifts to make loans outside their home territories. Instead, the agency adopted stricter record-keeping requirements on those loans.

The board on Friday also decided to impose higher net worth requirements on the industry — requiring that thrifts maintain capital levels equal to 6% of their liabilities — but compromised with industry trade groups over the phase-in period for the new standard. The current standard is 3%.

Beginning next year, the 6% requirement will be phased in over a period of six to 12 years, board officials said, depending on the industry's profitability.

In addition, the Bank Board dropped a proposal to increase the required level of liquid assets that thrifts must have on hand, a plan that has drawn strong industry opposition. And the agency issued a proposed rule that would further limit lending to a single borrower.

Most Big Credit Card Banks Offer Merchant Customers Fast, High-Tech Payment on Credit Card Transactions

➔ Continued from Page 1

iemma says he thinks that only about 10% of banks were providing data capture service two years ago. "That's a significant change in a short period time," he added.

The *American Banker* survey also found that at most institutions, data capture accounts for a relatively small amount of the dollar volume being deposited by their merchants. Data capture accounts for no more than 5% of total volume at about one-half of the banks that offer it.

THE CREDIT CARD BOOM
THIRD IN A SERIES

"I wouldn't bet my bankroll on a lot of high activity," said Randolph W. Wyckoff, senior vice president at Richmond-based Bank of Virginia, which offers data capture.

"There are a lot of things that have to be overcome," he said, referring to certain operational difficulties.

Special Tools Needed

Data capture requires special equipment at the merchant checkout counter that automatically reads the data encoded in the magnetic tape of the credit cards. Many national retailers already have installed such hardware as part of their own operations, but for smaller merchants this terminal can entail extra expense.

Banks offering data capture...
Yes 57 No 15

"The big guys have already got in place a mechanism, and have been doing that for some years," said Joseph C. Denaro, vice president and director of credit at the Framingham, Mass.-based Zayre Corp. "They did this with the anticipation of lower rates."

Banks charge merchants a fee, known as a discount fee, for credit card services. Each bank and merchant individually negotiate each fee, and the rates are lower for retailers with higher volumes and higher average sales.

Data capture allows banks to lower the discount fee, since the technology cuts their costs. Cumbersome paper-handling is reduced, and the processing fees that MasterCard International Inc. and Visa U.S.A. Inc. charge the banks for transactions decrease when data capture is used.

Smaller, local merchants are "a different animal," said Charles F. Brown Jr., a principal of Payment Interface Associates, a Severna Park, Md., consulting firm.

"I don't think they understand what's really going on," Mr. Brown said, adding that data capture is not necessarily cheaper for small retailers. The terminal costs extra, and sometimes banks do not lower the discount fee even though the merchants are using data capture, he said.

However, the technology has advantages for the small retailer.

The use of the special card-reading device means that all credit card transactions are authorized by a computer center, which verifies that the cards are not stolen or otherwise invalid. Without data capture, not all credit card transactions are authorized.

The terminal also handles settlement of bank card transactions, so merchants get credit for the transactions — without depositing the paper sales drafts — at the end of the day. If a retailer mails its credit card slips to the bank, crediting is delayed by a few days.

Small Retailers Approve

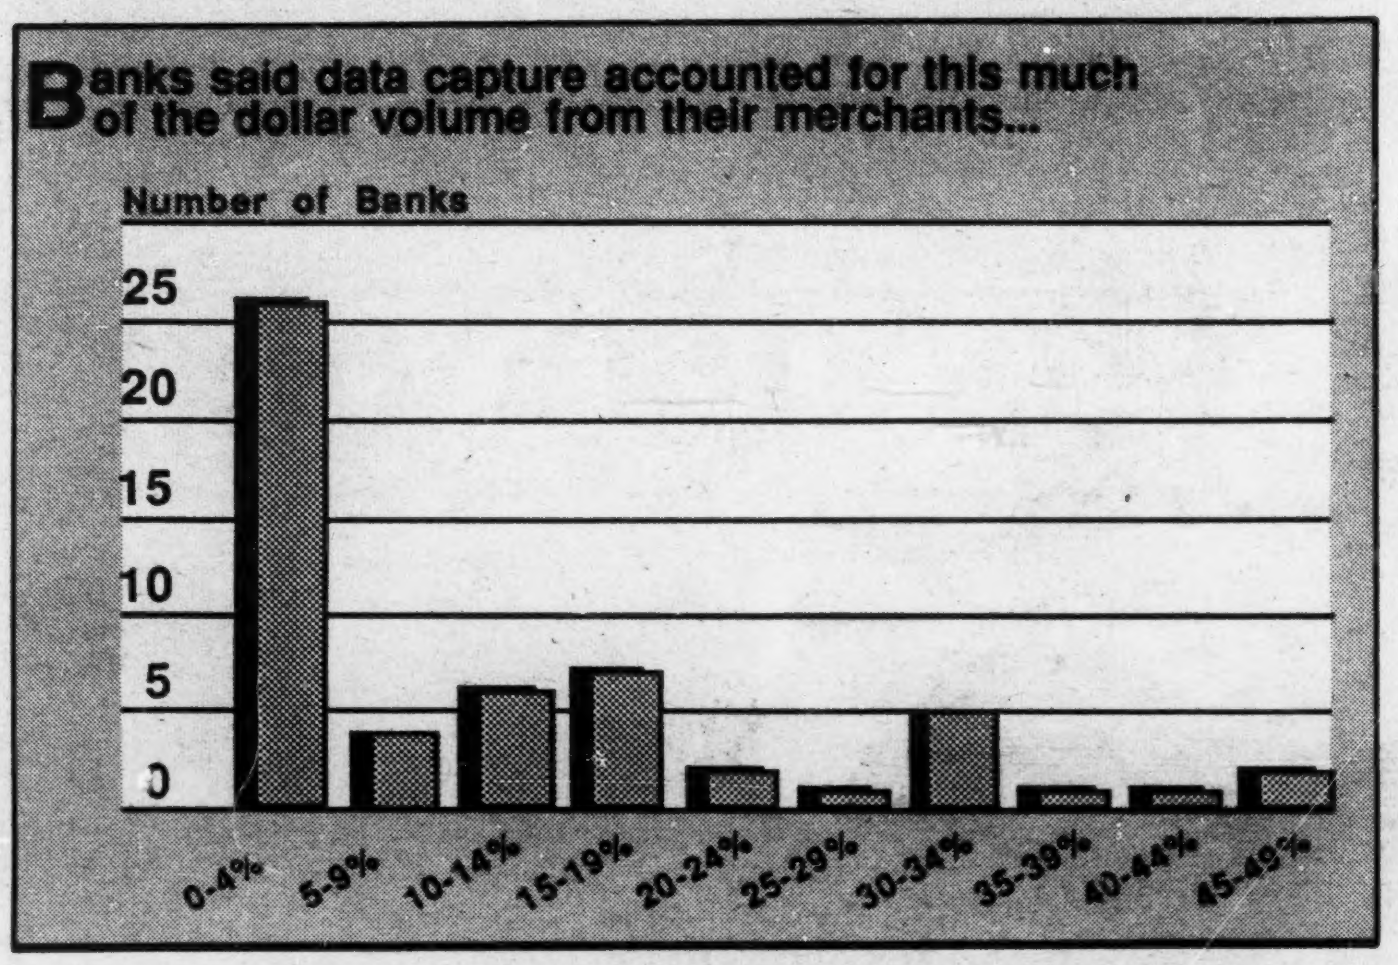
Smaller retailers also like the technology because it speeds up the authorization procedure, which is handled automatically by a terminal rather than a sales clerk who makes a telephone call. "Their clerks like it," Mr. Brown said.

Banks planning to offer data capture in the next year...
Yes 9 No 6

At a few banks, data capture now represents 40% to 50% of total volume.

These are banks at which large merchants account for a disproportionate amount of the banks' volume. Data capture is more effective for large, high-volume merchants than for smaller retailers.

Atlantic National Bank in Jacksonville, Fla., which handles 45% to 50% of its merchant volume via data capture, has actively pursued nationwide merchants.



Banks said data capture accounted for this much of the dollar volume from their merchants...

"Our objective is, wherever possible, to go electronic with it wherever we sign it," said Jerry P. Bryant, vice president at Atlantic National.

Mr. Bryant said the ability to offer data capture is critical in the highly competitive field of handling big merchants' credit card business.

"That's very important — to be able to say we can provide these services to you," he said.

Another big data-capture bank also views the service as a competitive necessity. "The banks that I compete with here in my area all have the capacity," said an executive at this bank, which serves several large merchants and at which data capture represents 45% of total volume.

Banks that plan to combine these operations in the next year...
Yes 1 No 35

The merchant credit card business is generally competitive, but especially so for nationwide merchants. The discount fee, generally 2% to 4% of the sale for most merchants, is even lower for national merchants.

Often, banks sell the merchant credit card business as an adjunct to other services. For example, a bank might offer credit card handling to a retailer that has an account at the bank and is depositing its daily receipts.

Big Merchants See Only Cost

However, nationwide merchants often are motivated strictly by price.

"It's extremely competitive," Mr. Bryant of Atlantic National explained. "They'll change processors for five basis points or three basis points."

In order to improve service to merchants, a number of banks have combined, at least to some degree, their debit and credit card operations. Because some bankers expect debit cards to become an accepted payment device, they think that it makes sense to offer merchants credit and debit card service as a single package.

The same electronic terminal, for example, can authorize both debit and credit cards.

Banks that have combined debit and credit card operations...
Yes 28 No 37

The *American Banker's* survey found that 43% of responding banks have combined their debit and credit card operations. The consolidations can include a range of combinations, such as a single operation to market plastic-card services to merchants or a joint issuing operation.

"I think you're going to see every kind of organizational permutation you can imagine in the next few years," said Joel P. Friedman, the director of strategic management at Arthur Andersen & Co., San Francisco.

All of the banks with separate credit and debit card operations except one said they have no plans to combine them in the next year.

Mr. Bryant of Atlantic National, however, sees consolidation as inevitable. "I think everybody's headed that way," he said, attributing it to the operating similarities of the two types of cards.

"You can see a slow migration of everything coming over here," said Mr. Bryant, who works in the credit card operation at Atlantic National. With one exception, all of the banks with combined operations have put the joint operation under the jurisdiction of a credit card executive.

At Atlantic National, the credit card center already handles inventory control, embossing, and mailing of the bank's debit and credit cards. ■

Correction

Beneficial National Bank USA, Wilmington, Del., was omitted from the table of top bank card issuers published Aug. 14 on page 1. Beneficial has one million accounts, ranking 16th on the list.

The table of top issuers of premium bank cards, published Aug. 14 on page 6, inaccurately stated the number of accounts at Chemical Bank, New York. Chemical has 8,300 accounts, which drops it off the list of the top 20 premium card issuers. ■

Wells Fargo Is 7th in Deposits

Takeover of Crocker Tops 1986 Merger Explosion

By L. MICHAEL CACACE

NEW YORK — Wells Fargo Bank, San Francisco, is now the seventh largest deposit-taking institution in the United States, with $32.6 billion in deposits on June 30. Its rapid growth, from 10th largest at yearend 1985, is due to its takeover of Crocker National Bank — one of a record number of bank mergers in the first half of 1986.

These are some of the findings of the *American Banker's* annual survey of the nation's top 300 commercial banks in total deposits on June 30.

Rankings of the Top 300 US Banks
Tables Begin on Page 39

In addition to the listing of the top 300 banks in deposit size order, there is a geographical listing of the top 300 banks which shows their June 30, 1986, deposits and assets.

The top six deposit takers remain unchanged from Dec. 31. Citibank, New York, which surpassed Bank of America in the yearend ranking, remained the top U.S. deposit taker on June 30 with $96.26 billion in deposits, up from $94.38 billion on Dec. 31.

Citibank was followed, in descending order, by Bank of America, San Francisco, and Chase Manhattan Bank, Manufacturers Hanover Trust Co., Morgan Guaranty Trust Co., and Chemical Bank, all based in New York.

Ranked eighth, ninth, and 10th, respectively, at June 30, were Security Pacific National Bank, Los Angeles; Bankers Trust Co., New York, and First National Bank of Chicago. These three dropped one place from the Dec. 31 rankings as a result of Wells Fargo's jump to the seventh spot.

In addition to its national growth, Wells Fargo has climbed into second place among deposit takers in California. Its $32.6 billion now ranks only behind the $88.6 billion-deposit Bank of America, and has surpassed Security Pacific National Bank, which had $32.5 billion in deposits on June 30.

At yearend 1985, Wells Fargo was the 10th largest bank and had $19.7 billion in deposits. On May 30, it merged with Crocker National Bank — the nation's 14th largest at yearend, with $15.1 billion in deposits.

This merger followed the acquisition of Crocker National Bank's parent, the Crocker National Corp., by Wells Fargo Bank's parent, Wells Fargo & Co., initiated last February. Wells Fargo & Co. acquired Crocker National Corp. from Midland Bank PLC for about $1.08 billion.

The merger of these two San Francisco giants, completed in May, was the largest of the record number of mergers involving the top 300 banks over the first half of 1986. Thirty-six of the top 300 banks acquired 71 other banks with combined total deposits of $32.5 billion during this period. The previous record for a January-June period was set in 1984, when 32 of the top 300 banks acquired 69 other banks with combined deposits totaling $10.2 billion.

Over the first half of 1985, only 23 of the top 300 banks signed merger agreements, acquiring 46 banks with

(Ranked by deposits in billions of dollars)

6/30/86 Rank	Deposits	12/31/85 Rank
1. Citibank	$96.26	1
2. Bank of America	$88.63	2
3. Chase Manhattan	$58.91	3
4. Manufacturers Hanover	$45.37	4
5. Morgan Guaranty	$42.14	5
6. Chemical Bank	$34.89	6
7. Wells Fargo Bank*	$32.58	14
8. Security Pacific	$32.46	7
9. Bankers Trust Co.	$28.66	8
10. First Chicago	$24.82	9

*The bank merged with Crocker National Bank under Crocker's charter, so the data for 12/31/85 deposits are for Crocker.

BankAmerica Oregon Deal Now in Doubt

Orbanco Has 'Concerns' About Fate of Merger

By ROBERT LUKE

LOS ANGELES — Orbanco Financial Services Corp. has "serious concerns" about the ability of BankAmerica Corp. to consummate its purchase of the Oregon Bank for $57 million in cash.

The parent of Oregon's third largest bank is expected to express those concerns in a quarterly report to shareholders to be mailed shortly.

BankAmerica Corporation

ORBANCO
FINANCIAL SERVICES CORPORATION

"We felt the recent announcement by BankAmerica of their earnings [a second-quarter loss of $640 million] certainly will have an impact on regulators approving the transaction," said Loretta Johnson, a spokeswoman for Orbanco, which is based in Portland.

Ms. Johnson stressed that Orbanco, which is in the process of liquidation, has received no word from BankAmerica, nor the Federal Reserve, which is considering the purchase application.

"BankAmerica has continued to state that they are still interested and committed to this transaction, and they have said it remains a high priority for them," Ms. Johnson said.

Peter Magnani, a BankAmerica spokesman, confirmed the company's continuing interest in acquiring the Oregon Bank.

"We're still pursuing it," he said.

Even successful lenders run into difficulties now and then.

During the course of granting property improvement and home equity loans, lenders invariably must make judgements concerning eligibility. Occasionally, circumstances arise which undermine the value of those judgements. That's when it's good to have the ICS Lender's Edge.

Insured Credit Services, a leading provider of credit guarantee insurance protection, safeguards lenders from the painful consequences of default. ICS provides Loan Profit Programs covering property improvement loans, home equity loans and secured revolving lines of credit as well as Yield Maintenance Insurance which guarantees rate protection on fixed rate loans to safeguard profits against rising money costs. ICS is a wholly-owned subsidiary of Old Republic International Corporation.

Since 1954, nearly 2,000 financial institutions have relied on ICS to build and protect their consumer loan business. Find out how you, too, can enjoy the Lender's Edge. Send us a note on your letterhead to receive complete details or, for immediate information, call William F. Schumann, President, at 312/621-9400.

The total of failures is complete as of Aug. 18 and does not include three assistance transactions, one in Oklahoma and two in Kansas.

41. **Bank of Commerce and Trust Co.,** Tulsa, Okla. Closed May 8. Deposits of $126 million. Assumed by the First National Bank and Trust Co., Tulsa.

42. **Rainsville Bank,** Rainsville, Ala. Closed May 9. Its $15.6 million in deposit liabilities were assumed by Jacobs Bank, Scottsboro, Ala.

• 43. **First Bank and Trust of Idaho,** Malad City, Idaho. Closed May 9. Deposits of $54.7 million. Assumed by the Idaho First National Bank, Boise, Idaho.

• 44. **Citizens State Bank of St. Francis,** St. Francis, Kan. Closed May 15. Deposits of $22 million. Assumed by St. Francis State Bank and Trust Co., a newly chartered subsidiary of G.S. Bancshares Inc., Goodland, Kan.

45. **Saddleback National Bank,** Laguna Hills, Calif. Closed May 15. Had about $12.9 million in deposits, of which about $140,000 exceeded the federal insurance limit. Insured deposits were transferred to Landmark Bank, La Habra, Calif., while uninsured depositors and nondeposit creditors will share proportionately with the FDIC in the proceeds of asset liquidations.

• 46. **First State Bank & Trust Co.,** Edinburg, Tex. Closed May 23. Deposits of $118.8 million, of which $1.8 million exceeded the $100,000 insurance limit. After first deciding to pay off insured deposits, the FDIC on May 28 changed this to have the deposits assumed by NBC Bank-Edinburg, Edinburg, Tex., a newly formed subsidiary of National Bancshares Corp. of Texas, San Antonio.

47. **Centennial State Bank of Colorado,** Englewood, Colo. Closed May 23. Deposits of $18.9 million. Assumed by First Interstate Bank of Centennial NA, Centennial, Colo., a newly chartered national bank subsidiary of First Golden Bancorp., Golden, Colo.

48. **Sunshine State Bank,** South Miami, Fla. Closed May 23. Deposits of $97 million, of which $3.7 million exceeded the $100,000 insurance limit. A payoff of insured deposits was arranged, and uninsured depositors will share with the FDIC in the proceeds of asset sales.

• 49. **Roseland State Bank,** Roseland, Neb. Closed May 28. Deposits of $10.1 million. Assumed by Hastings State Bank, Hastings, Neb.

• 50. **Lone Rock Bank,** Lone Rock, Iowa. Closed May 29. Deposits of $7.1 million. Assumed by Swea City State Bank of Swea City, Iowa.

51. **First National Bank and Trust Co. of Norman,** Norman, Okla. Closed May 29. Deposits of $68.9 million. All but $512,000 federally insured. No acceptable bids received. Bank's insured deposits were transferred to the Liberty National Bank and Trust Co. of Oklahoma City, Okla., for a purchase premium of $250,000.

52. **Bank of Columbia Falls,** Columbia Falls, Mont. Closed May 30. Deposits of $40.5 million assumed by First Citizens Bank, Columbia Falls, Mont. Failed bank's sole office reopened as First Citizens Bank.

53. **Banco de Ahorro,** Mayaguez, P.R. Closed May 30. Failed bank's five offices reopened as branches of Banco Popular de Puerto Rico of San Juan. Banco Popular assumed $28.2 million in deposits from the failed bank and agreed to a purchase premium of $412,000.

• 54. **The Citizens State Bank,** McCracken, Kan. Closed June 5. Payoff of insured deposits. All but $5,000 of $10.3 million in deposits were insured.

55. **Security Bank,** Glenrock, Wyo., closed June 6. Payoff of insured deposits. All but $1,600 of $5.8 million in total deposits were insured.

56. **PetroBank NA,** Houston. Closed June 12. Payoff of insured deposits and

The bulk of the data are from American Banker questionnaire. The questionnaire requests consolidated data — for the bank and its domestic and foreign subsidiaries — as reported on the Federal regulatory agencies' Report of Condition ("Call Report") for June 30, 1986, whenever possible. Data may not be comparable with other periods because of mergers, changes in accounting practices, etc. In the case of mergers, the bank— under whose charter the merger took place— is considered the surviving bank. (a)— The bank merged with Crocker National Bank, San Francisco, under the latter's charter. Data shown for 6/30/85 and 12/31/85 are for Crocker National Bank, therefore. (b)— In March, Mercantile Trust Co. NA, and six other affiliate banks of Mercantile Bancorp., Inc., merged under the charter of Gravois Mercantile Bank, St. Louis County. (†) — Totals for 6/30/85 and 12/31/85 are for the top 100 banks on those respective dates.

Top 300 Commercial Banks in the United States

In Order of Deposits June 30, 1986, Compared with June 30, 1985 and Dec. 31, 1985

The bulk of the data are from American Banker questionnaire. The questionnaire requests consolidated data — for the bank and its domestic and foreign subsidiaries — as reported on the Federal regulatory agencies' Report of Condition ("Call Report") for June 30, 1986, whenever possible. Data may not be comparable with other periods because of mergers, changes in accounting practices, etc. In the case of mergers, the bank— under whose charter the merger took place— is considered the surviving bank. (c)— In February, Centerre Bank NA, St. Louis, and three other affiliated banks of Centerre Bancorp., merged under the charter of Centerre Bank of South County NA, St. Louis County. The latter bank then changed title and location. (†) — Totals for 6/30/85 and 12/31/85 are for the banked ranked 101-200 on those respective dates.

The bulk of the data are from American Banker questionnaire. The questionnaire requests consolidated data — for the bank and its domestic and foreign subsidiaries — as reported on the Federal regulatory agencies' Report of Condition ("Call Report") for June 30, 1986, whenever possible. Data may not be comparable with other periods because of mergers, changes in accounting practices, etc. In the case of mergers, the bank— under whose charter the merger took place— is considered the surviving bank. (d)— Data are for 7/14/86, the day the bank was closed by Federal bank regulators. (†) — Totals for 6/30/85 and 12/31/85 are for the banks ranked 201-300 on those respective dates and for the top 300 banks on those respective dates.

A Geographical Breakdown of the Top 300 Banks

Ranked by Deposits on June 30, 1986, with Total Assets

(In Thousands of Dollars)

Top 300 Banks in Deposits Engage in Record Number of Mergers

➡ **Continued from Page 1**

combined deposits of $5.12 billion. For all of 1985, 44 banks acquired 137 other banks with $16.5 billion in deposits.

The 1986 surge in merger activity was helped by last year's U.S. Supreme Court decision affirming the constitutionality of regional interstate banking compacts. On June 10, 1985, the Supreme Court unanimously ruled that states had the right to decide which other states' financial institutions would be allowed entry. After this decision, six major interstate deals were closed.

Two of them occurred in December 1985. First Union Corp., Charlotte, N.C., acquired the Atlantic Bancorp., Jacksonville, Fla., the one-bank holding company for Atlantic National Bank of Florida. At that time, First Union also announced plans to acquire First Bankers Corporation of Florida, Pompano Beach, a multibank holding company. The First Bankers deal was completed on May 17.

On June 9, First Union merged the eight bank affiliates and their $1 billion in deposits into Atlantic National Bank. Atlantic's name was then changed to First Union National Bank of Florida.

NCNB Corp., Charlotte, completed its acquisition of Pan American Banks Inc., Miami, on Dec. 30. Then, over the first six months of 1986, three of the former bank affiliates of Pan American — Pan American Bank, Jacksonville; Pan American Bank of Orlando NA, and Pan American Bank of Tampa NA — were merged into NCNB National Bank of Florida, Tampa, adding more than $250 million in deposits to the midyear total of that bank.

Consolidations of Parent Companies

Most of the mergers in the first half of 1986 were the result of multibank holding companies consolidating their interstate or intrastate affiliate banking subsidiaries into larger banking units. Excluding the Wells Fargo-Crocker merger, of the 35 other banks involved in mergers, 17 were consolidations of parent holding company affiliates. These 17 banks merged 52 banks with $15.3 billion in deposits. The other 18 banks acquired 18 unrelated institutions with $2.1 billion in deposits.

Some of these consolidations occurred in the wake of significant intrastate merger deals that have occurred over the past several years. Others are attributable to changes in state banking laws pertaining to branching across county lines.

For example, on July 1, 1983, American Bancorp., Reading (the parent of American Bank & Trust Co.), and Central Penn National Corp., Philadelphia (the parent of the $942 million-deposit Central Penn National Bank), merged to form Meridian Bancorp., a two-bank holding company.

In 1984, Meridian became a three-bank holding company when it acquired the First National Bancorporation of Allentown, the parent of the $1 billion-deposit First National Bank of Allentown. On April 21, the two banks were merged into American Bank & Trust Co., which changed its name to Meridian Bank.

In October 1985, the Society Corp., Cleveland, acquired Centran Corp. In February, Society Corp. merged two of Centran's six banking affiliates — the $1.5 billion-deposit Central National Bank, Cleveland, and the $305 million-deposit Centran Bank of Akron — into its lead bank, Society National Bank.

There were four major mergers in Missouri during the first six months of 1986. Recent changes in Missouri banking law with respect to "facilities" over the past three years are behind the mergers in that state. In 1983, the law permitted the establishment of a facility acquired through merger within the same county. In 1984, the law permitted banks that merged to keep their existing facilities and also include the acquired bank as a facility.

For example, Bank A with three facilities acquires Bank B with three facilities. Bank A now has seven facilities — its three, Bank B's three, and Bank B itself. In 1985, the law permitted the establishment of facilities into adjacent counties.

In October 1985, Mercantile Bancorp., St. Louis, acquired Gravois Bancorp., also in St. Louis, a two-bank holding company. On March 14, 1986, Mercantile merged six of its bank affiliates, including its lead bank, Mercantile Trust Co., into Gravois Mercantile National Bank, St. Louis County. After the merger, both the title and location of the bank were changed to Mercantile Bank NA, St. Louis.

In February, Centerre Bancorp., St. Louis, merged three of its 20 banks, including its lead bank, Centerre Bank NA, into a fourth subsidiary, Centerre Bank of South County NA, St. Louis County. The latter then changed its title and location to become the new Centerre Bank NA, St. Louis.

On March 1986, two St. Louis-based holding companies, Boatmen's Bancshares Inc. and General Bancshares Corp., merged. General Bancshares' lead bank, the $449 million-deposit General Bank, St. Louis, on June 1 was merged into Boatmen's National Bank, St. Louis.

On Feb. 28, Mark Twain Bancshares Inc. merged six of its nine bank affiliates into one bank. The six banks, which had combined total deposits of approximately $658 million, merged under the charter of Mark Twain National Bank, Ladue, which then changed its name to Mark Twain Bank NA.

Other Survey Findings

In addition to mergers, a spate of name changes occurred over the first half of 1986. Most of these name changes are attributable to the substantial merger activity of the past several years.

- In March 1986, Sovran Financial Corp., Norfolk, Va., acquired Suburban Bancorp., Bethesda, Md., and changed the name of Suburban Bank to Sovran Bank/Maryland.
- On Jan. 2, 1986, NCNB Corp., Charlotte, N.C., acquired Bankers Trust Company of South Carolina, Columbia. On April 28, the bank's title was changed to NCNB South Carolina.
- In 1984, Society Corp., Cleveland, acquired the Interstate Financial Corp., Dayton, the holding company for Third National Bank & Trust Co. On April 21, Society Bank NA, Springfield, was merged into Third National, and the latter's title was changed to So-

Three Banks Purchase Logica Inc.'s Software

NEW YORK — Logica Inc., developer of bank automation and communications systems, announced orders totaling $900,000 from three banks for its Fastwire message switching and payments processing software.

The buyers are: Chemical Bank, New York, which will install Fastwire in its systems development center in Cardiff, Wales; the World Bank, Washington, D.C., which has installed Fastwire to interface to the Swift and Fedwire networks and the telex system; and Hambros Bank, London, which will interface with Swift network, the British domestic telex system, and the Hambros mainframe. ■

2 Banking Handbooks Available

BOULDER, Colo. — Two handbooks on new banking opportunities have been published by Westview Press, a Boulder-based publishing firm, and Marketing One Inc., based in Portland, Ore. The latter is a provider of sales delivery systems for financial institutions.

The handbooks are entitled, "Self-Directed IRAs: Investment, Marketing, and Trust Administration Strategies" and "Marketing Life Insurance in a Bank or Thrift."

For more information, call 303-444-3541. ■

Continental . . .

➜ Continued from Page 8

Moreover, Continental said it will maintain the staff of First Options, a subsidiary of leading New York Stock Exchange specialist firm Spear Leeds & Kellogg. First Options employs about 650 people.

Mr. Mueller also regarded as positive Continental's effort to at last find a source of alternative income. "It's good to see Continental build up its noninterest income," he said. "It's good to see the bank make some moves." ■

Charter . . .

➜ Continued from Page 48

that are able to meet the higher capital standards of commercial bank regulators have publicly stated that they are considering becoming commercial banks.

Banks also may begin to seriously consider still other options, which, though not as drastic as leaving commercial banking, would push commercial banks more toward investment banking.

For example, nationally chartered banks that want to expand their powers may decide to switch to a state charter. Karen Shaw, a researcher with the Institute for Strategy Development, a business consulting firm, said such charter-switching "is going to be a trend" in the next few years in states with liberal securities powers for banks.

Switching to a state charter would not help a bank in search of new powers if it is located in a state with strict regulations on banks' investment activities. But according to a Consumer Bankers Association study released earlier this year, other options are available that could allow banks to at least compete more effectively within the guidelines of banking law.

The association's study says banks should take a lesson from thrifts, which offer packages of services to specific groups of customers, such as real estate developers. In that way, thrifts have followed their competitors in the securities industry in offering "one-stop shopping" to customers.

Although banks are barred from real estate and insurance activities available to thrifts, they can still package their services in such a way to target particular customers, the study says.

For example, instead of offering certificates of deposit or home equity loans separately, a bank could offer something like an education fund, a package of deposit and loan products that combine to provide customers with a specified dollar amount by the time their children are ready to attend college. "A number of packages can be filled with what, to the banker, are virtually identical financial instruments," the study notes.

Miss Shaw said a number of banks are considering such packages, but she said she knew of no particular examples.

But such repackaging of traditional instruments may be small consolation to an institution with a desire to, for example, underwrite commercial paper or municipal revenue bonds. For that reason, analysts say, it may be only a matter of time before banks take more drastic steps, either in switching to the savings and loan industry or the securities industry, if Congress does nothing to allow banks expanded powers.

An official of the Association of Bank Holding Companies noted that although he did not expect banks to rush to the securities business in the near future, they still would have to make hard choices about how to better compete with firms outside the industry.

"It's recognized that five years down the road we've got to be better positioned than we are now," the official said. ■

Failures . . .

➜ Continued from Page 12

tinger, Iowa, closed Aug. 7. Deposits of $11.4 million assumed by Swea City State Bank, Swea City, Iowa.

89. **Medicine Bow State Bank,** Medicine Bow, Wyo., closed Aug 8. Payoff of insured deposits. All but about $4,000 of total $4 million in total deposits were insured.

• 90. **The State Exchange Bank,** Yates Center, Kan., closed Aug. 14, assumed by The Girard National Bank, Girard, Kan. Total deposits $24.8 million.

91. **Citizens National Bank and Trust Co.,** Oklahoma City, closed Aug 14. Deposits of $157.5 million, including $3.7 million in accounts above the federal insurance limit, were transferred to The Liberty National Bank and Trust Company of Oklahoma City.

92. **Bank of Oklahoma, Oklahoma City NA,** with assets of more than $500 million, was in danger of failing but the FDIC announced a conditional $130 million assistance package. As one condition of the assistance program, the bank is to be merged into the $1.6 billion Bank of Oklahoma, Tulsa NA. Both are subsidiaries of BancOklahoma Corp. The FDIC's assistance package, announced Aug. 15, includes $90 million of nonvoting convertible preferred stock in the bank. Also, bank creditors of the holding company have agreed to substantial concessions in the terms of their loans.

• 93. **State Bank of Westphalia,** Westphalia, Kan., was deemed in danger of failing but the FDIC on Aug. 15 announced that it granted financial assistance to facilitate the acquisition of the bank by Kansas State Bank, Garnett, Kan. The FDIC's assistance package consists of a guaranty to Kansas State Bank against potential losses of approximately $277,000.

$1 Million Pledged For 'Bankers' Bank'

LOUISVILLE, Ky. — Kentucky's independent bankers have pledged nearly $1 million to fund a new financial institution for bankers, a so-called bankers' bank.

The efforts, headed by members of Kentucky's Independent Community Bankers Association, began about two years ago.

The new bank would require at least $2 million from 20 banks, said Charles D. Bennett, president of Farmers Bank in Hardinsburg and chairman of the committee helping form the new state-chartered bank. The group's goal is $5 million with about 40 banks participating.

A stock offering to underwrite the bank is to expire Sept. 9, but may be extended, Mr. Bennett said.

Before the bank can open, it must receive approval from the state Department of Financial Institutions and the Federal Reserve.

The bank — which would be called the Kentucky Independent Bank — would not be used by consumers, but would enhance independent bankers' abilities to provide services for their customers. Services to be offered member banks would include check clearing, investment services, and loan participation. ■

Strategic Dates

Jan. 1, 1989

LOUISIANA TRIGGER: Nationwide interstate banking on a reciprocal basis is set to go into effect today in Louisiana.

Sullivan . . .

➜ Continued from Page 4

spite of the fact that the information is released to electronic news media and placed on the radio almost instantaneously, efforts must be made to inform employees immediately. Creative means of informing them include announcements over existing building public address systems, administrative computer terminals, and telephone relay systems set up to pass the announcement along quickly.

Keeping employees up to date is an important part of the process. The commitment must be made and carried out. It pays big dividends later.

• Melding the corporate cultures. Just as significant as any other is the need to understand how to deal with managing the eventual corporate cultures — the value system, the beliefs, and the philosophies that drive the resulting organization.

Most bank officers are not skilled at understanding how to merge the value systems of the two organizations in a way that shapes the resulting organization.

The American Bankers Association, in concert with Peat, Marwick, Mitchell & Co. and O.D. Resources Inc., has developed a program for bankers to attend this fall on managing change and corporate cultures. The program is a series of five two-day workshops for senior management.

Programs such as these add invaluable assistance to bankers involved in the complex world of interstate acquisitions.

In summary, communications strategy in interstate acquisitions involves an awareness of the value of communications in achieving the organizational objectives. Few banking institutions are equipped to deal with all the issues involved. However, astute banking executives are aware of the value of doing it right, right from the beginning. ■

Top 300 . . .

Contiaued from Page 50

ciety Bank NA, Dayton.

- In April 1984, Omaha National Corp., Omaha, Neb., acquired First National Lincoln Corp. and changed its name to FirsTier Inc., a three-bank holding company. On April 22, 1986, FirsTier changed the name of its banks to reflect the corporate name change. Its lead bank, Omaha National Bank, became FirsTier Bank NA, Omaha.
- On April 1, 1986, First Union acquired Southern Bancorp., Greenville, S.C. And on April 7, the name of Southern's bank subsidiary, Southern Bank & Trust Co., was changed to First Union National Bank of South Carolina.

There were also several name changes that were not attributable to mergers.

- Fourth Financial Corp., Wichita, Kan., changed the name of its bank subsidiary, Fourth National Bank & Trust Co., to Bank IV Wichita NA on March 31.
- And National Bancshares Corporation of Texas, San Antonio, changed the name of its lead bank, National Bank of Commerce, to NBC Bank-San Antonio NA on March 17.
- Among the nation's top 100 banks, the largest nonmerger-related gain in rank over the first half of 1986 was posted by Boston Safe Deposit & Trust Co. It moved up 39 places in rank to 49th place, as its deposits soared by more than 69% to $5.1 billion on June 30, from $3 billion in deposits at yearend 1985 when it ranked 88th.

The deposits at Boston Safe Deposit & Trust Co. have risen by over 3,400% since 1980 when it ranked 963d in deposits among banks. The sharp rise coincides with the acquisition of the bank's parent — The Boston Co. — by Shearson Lehman Brothers in 1981.

- Among the top 100 banks, the five banks with the sharpest declines in rank are all Texas-based. InterFirst Bank Dallas NA's deposits fell 34% over the first half of 1986 to $4.6 billion on June 30 to place it 59th in deposits, down 29 places from 30th rank at yearend when it had $7 billion in deposits.
- First City National Bank, Houston, had a 27% drop in its deposits to fall 24 places in rank to 66th position at midyear with deposits of $4 billion, compared with deposits of $5.5 billion on Dec. 31, 1985, when it ranked 42d.
- Allied Bank of Texas, Houston had $2.8 billion in deposits on June 30, down 17.7% from $3.4 billion at yearend. As a result, Allied dropped 23 places in rank to 97th place from 74th position.
- MBank Houston NA had a 4.8% decline in deposits to drop 13 places in rank to 89th place with $3.2 billion in deposits, down from $3.4 billion on Dec. 31, when it ranked 76th.
- And MBank Dallas NA fell 11 places in rank to 51st position as its deposits fell 12.2% to $5.04 billion on June from $5.74 billion six months earlier. ■

Dear Reader, How Are We Doing?

The American Banker wants very much to make sure its coverage of the financial services industry meets your information needs. So would you spend a moment to give us some feedback on the statistical tables that appear in today's survey of the **Top 300 Banks by Deposits**? Over the past year we have incorporated many of your suggestions to provide more meaningful information. Please return this questionnaire to L. Michael Cacace, Statistical Chief, American Banker, One State Street Plaza, New York, N.Y. 10004. Telephone 212-943-4836.

Insurance Firm Operates Kentucky Kroger Center

Special to the American Banker

LOUISVILLE, Ky. — An affiliate of Capital Holding Corp. has begun selling insurance and offering financial services in a Kroger's supermarket in Lexington, Ky. It is the Louisville-based company's first Kroger Financial Center in Kentucky, although it now operates 12 centers in Tennessee, Ohio, and Alabama.

The affiliate, Commonwealth Insurance, began selling insurance and mutual funds in Kroger supermarkets in 1983. Licensed agents offer customers individual financial assessments and analyze their insurance needs in private offices at the sites. Products sold include individual retirement accounts and annuities.

The company plans to open at least one more center in the Lexington area by the end of the year; it expects to be operating four there by mid-1987. Plans call for additional centers in other Kentucky cities, but the company declined to name cities or when they might open. ■

Orbanco . . .

Continued from Page 1

Francisco received BankAmerica's application on June 6 and, on July 9, requested additional information based "on June 30 data," a Federal Reserve spokesman said.

BankAmerica officials indicated to the Fed they would provide the information by July 25 but, on Aug. 4, requested an extension until Aug. 29, the Federal Reserve spokesman said. That request was granted.

Both Orbanco and BankAmerica originally had expected to close the transaction last month, shortly after Oregon's interstate banking law took effect July 1.

Delays in completing the transaction could be costly for BankAmerica, the San Francisco-based parent of Bank of America and Seafirst Corp., Seattle, parent of Seattle-First National Bank. Under the agreement with Orbanco, the purchase price has been rising by a specified percentage since July 2.

According to the agreement, if the sale was not completed by July 1, the purchase price was scheduled to increase — beginning July 2 and ending on the closing date — by the higher of 10% per year or the interest rate in effect on July 1 under Orbanco's revolving credit agreement with its lenders, including a group of banks owed about $34 million.

Should the agreement with BankAmerica be terminated, Orbanco's indebtedness would become due and payable immediately, according to an Orbanco proxy statement detailing the firm's liquidation.

"Failure to consummate . . . the bank sale by July 31, 1986, would constitute an event of default under the credit agreements with the holding company's bank lenders, and any such future action would also have to take into account the position of the lenders," the proxy statement said.

Ms. Johnson said Orbanco continues to work with its lenders and "renegotiations are related to the ability to dispose of its assets."

Should the transaction with BankAmerica not be consummated, Ms. Johnson said, Orbanco's directors will "immediately pursue other avenues," such as selling the Oregon Bank and related subsidiaries to another party, or continuing to operate the bank, which reported assets of nearly $1.05 billion on March 31.

Ms. Johnson declined to comment on whether Orbanco had received inquiries from other parties. She noted that Orbanco had an agreement with BankAmerica not to solicit, initiate, or encourage inquiries or proposals from others.

Orbanco's agreement with BankAmerica expires on June 30, 1987, or can be terminated by mutual consent or if regulators disapprove the transaction.

In its application to acquire the Oregon Bank, BankAmerica warned that "failure of the [Federal Reserve] Board to permit this acquisition . . . will severely limit the scope of BAC's growth possibilities and will foreclose to it the benefits of an opportune investment, one that may not be available in the future."

BankAmerica argued that the acquisition will not decrease its capital ratio. On the contrary, it said the move "will permit it to accelerate its objective of building capital resources."

Additionally, BankAmerica said the $57 million purchase price is less than the Oregon Bank's book value, and its attractiveness has improved.

"For example, between March 31, 1985, and March 31, 1986, the market value of the combined government and municipal portfolios has improved by $11.4 million because of falling interest rates, so that at March 31, 1986, market value was less than associated cost by only $1.8 million, compared with $13.2 million at March 31, 1985.

"Another example is that the bank's ratio of nonperforming loans to total loans, while still above that of its competitors, is declining. Nonaccrual, renegotiated, and OREO [other real estate owned] loans decreased from $42.4 million at Dec. 31, 1984, to $36 million at March 31, 1986, and are projected to decline to $25 million at Dec. 31, 1986.

"While still above peer group levels, it does not appear that a major earnings impact due to loan losses is likely. Thus, most of the major negatives are known and do not appear to present serious ongoing problems, particularly in the context of viewing the bank as a subsidiary of BAC."

Orbanco has been under severe financial pressure in recent years, largely because of nonperforming assets, particularly in the construction, forest products, energy-related, and real estate sectors. For example, Orbanco suffered a net loss of $31.3 million, or $10.59 a share, in the first six months of 1985. It lost $4 million in 1984 and $9.5 million in 1983.

The Oregon Bank lost $2.34 million in 1985, $1 million in 1984, and $6.2 million in 1983.

Last fall, Orbanco's shareholders approved a plan of liquidation for the company, including the sale of the Oregon Bank and related subsidiaries to BankAmerica and the sale, for $50.4 million, of its Northwest Acceptance Corp. unit to Inner PacifiCorp Inc., a subsidiary of PacifiCorp, a utility holding company based in Portland. ■

AMERICAN BANKER CAN BE READ DAILY VIA ONLINE SERVICES

American Banker stories and commentaries can be read through several electronic sources. These sources can provide early-morning access to the news, the ability to search for stories on chosen subjects in past editions, and clipping services, in which stories on preselected topics are delivered automatically to the reader. Telephone and terminal equipment are needed to use these services. A brief description follows.

BRS INFORMATION TECHNOLOGIES — Contains today's news stories in financial services, a financial services news summary, daily executive job changes, a daily calendar of events in Washington, and more. Available beginning 6:00 a.m. Eastern Time. Call (800) 223-3009. In New York State, call (212) 943-9893.

DIALOG — FINIS (file 268) indexes and abstracts marketing articles from American Banker. NewsSearch (file 211), indexing only. Trade & Industry Index (file 148), indexing and full text, no searching of text. Trade & Industry ASAP (file 648) indexing and full text with searching capabilities. Call (800) 227-8431.

NEWSNET — Major stories and articles. Full text search and retrieval available at 6:30 a.m. Eastern Time. Call (800) 345-1301. In Pennsylvania, call (215) 527-8030.

NEXIS® — Provides the full text of all American Banker features and news coverage since Jan. 2, 1979. Available approximately 48 hours after print publication date. Electronic clipping service available for automatic updates. FINIS, with indexing but not full text, also available. Call (800) 227-4908.

For further information, please call Brad Henderson, director of product development, the American Banker. Collect (212) 943-4846.

FDIC Stretching Safety Net for Troubled Banks

As Failures Mount to Post-Depression Record, Agency Tries to Find Solutions

By JAY ROSENSTEIN

WASHINGTON — Any day now, the Federal Deposit Insurance Corp. will be handling the 100th failure of an insured bank this year.

It is unlikely that such an event will cause an uproar, indicating that troubled times in banking have become accepted. It also is a sign that the FDIC continues to successfully tinker with its policies and procedures for handling a mounting workload and avoiding disruptions in banking services, despite limited resources and a variety of economic and legal constraints.

So far this year, 94 banks have closed. But it can be argued that the total number of failures is actually 97. That's because two Kansas banks that were in danger of closing are now receiving FDIC assistance, and the Bank of Oklahoma, Oklahoma City NA, and indirectly its parent, has gotten the nod for FDIC aid but is awaiting shareholder approval and other final steps.

Table of Bank Failures by State
Page 12

This week, three more banks — numbers 98, 99 and 100 — are expected to be closed. More will fall soon thereafter. As many as 160 insured banks could fail in 1986, estimates FDIC Chairman L. William Seidman.

That would be well ahead of last year's record, when 120 insured banks closed — the most since 1933, the year before federal deposit insurance was created. In 1985, the 100th failure didn't occur until Nov. 8 — more than two months behind this year's pace.

For the FDIC, the year 1986 may be remembered as the year when "open-bank assistance" came out of the closet. FDIC aid to an open bank is rare in the agency's history. Typically, the FDIC provides assistance to the acquirer of a closed bank. Also, the FDIC has been reluctant to provide aid that would help, directly or indirectly, the holding company of a failed bank or the bank's shareholders.

But after three cases of open-bank assistance this year, including the planned $130 million package for a subsidiary of BancOklahoma Corp., this form of aid could become more commonplace.

"Yes, I would think we might see more," says Charles E. Thacker, director of bank supervision in the FDIC's

RAISING CAPITAL: Market Issues Soar for Financial Firms

By JOHN P. FORDE

NEW YORK — The strong performance of the equity markets this summer helped induce Salomon Brothers Inc. to take the debt markets for a "Spin"in July, while smaller New England financial institutions turned to the equity markets in droves.

Spins, or Standard & Poor's index notes, carry a floating interest rate but will repay principal at maturity at a rate tied to the performance of the Standard & Poor's Composite Index of 500 Stocks.

AN American Banker MONTHLY FEATURE

Spins were among the most innovative of July's active calendar in the capital markets, as the nation's largest financial firms offered a total of $21.3 billion in debt, up from $19.7 billion in June.

Observers said companies continued the rush into the markets as they saw interest rates maintain a downward slide. The Federal Reserve cut its discount rate on July 11 to 6% from 6.5%, its third of four cuts this year, giving thrust to much of the capital-raising activity. This was immediately followed by downward pressure on market rates and a half-point cut in the prime rate, quoted by most banks last month at 8%.

Financial companies also offered $897 million in equity, primarily through common stock offerings timed to take advantage of the stock market's relatively strong performance.

Government-chartered loan remarketers, led by the Federal National Mortgage Association, accounted for fully half of the debt offerings by financial institutions in July. They issued a total of just under $11 billion in debt. Fannie Mae's portion, consisting of six issues, accounted for $4.1 billion of July's debt offerings.

Private loan remarketers brought over $3.2 billion in debt to the market in July, of which all but $250 million was in collateralized mortgage obligations. Thrifts issued $3.4 billion in debt during July, as well as $266 million in equity, mostly through the initial public offerings.

Table of Major Offerings in July
Page 6

Banks offered $2.5 billion in debt during the month, as well as $64.6 million in equity. A strong portion of the equity offerings came from New England banks, which placed shares

Rural Bank Failures Aren't a Big Problem – Yet

Commercial banks that buy failed rural banks tend to be too conservative, and it is also difficult to locate suitable acquirers in the first place, according to Gregory Gajewski. Mr. Gajewski is a financial economist with the finance and tax branch of the agriculture and rural economics division of the Economic Research Service. The Economic Research Service, an agency within the Department of Agriculture, studies agricultural conditions and rural communities. Mr. Gajewski's article was originally published in the June 1986 edition of Rural Development Perspectives, *a quarterly publication of the Economic Research Service.*

□

THE 118 COMMERCIAL bank failures in 1985 represent a twelvefold increase since 1981 and set a post-Depression record for bank failures in one year. An increasing proportion of the failed banks are rural or agricultural banks. Almost 70% of the failed banks in 1985 were rural agricultural banks, up from 16% in 1983.

This article highlights recent trends in commercial bank failures to see how the failures are affecting rural communities and if rural growth is threatened by too few banks serving local rural markets.

Bank failures have not, so far, hurt a large segment of the rural population. Most failed banks are replaced by healthy ones within a few days.

This may be changing, however. The Federal Deposit Insurance Corp. is beginning to have difficulty finding banks willing to acquire failed institutions. Moreover, individuals suffering debt repayment problems and marginally qualified borrowers find it more difficult to obtain credit as a result of these failures, hindering local economic growth and development.

The continuing financial problems of farmers and problems developing in the energy sector will likely cause additional rural banks to fail over the next several years. While these failures will hurt local and regional credit markets, recent experience suggests that the national effects will be relatively mild.

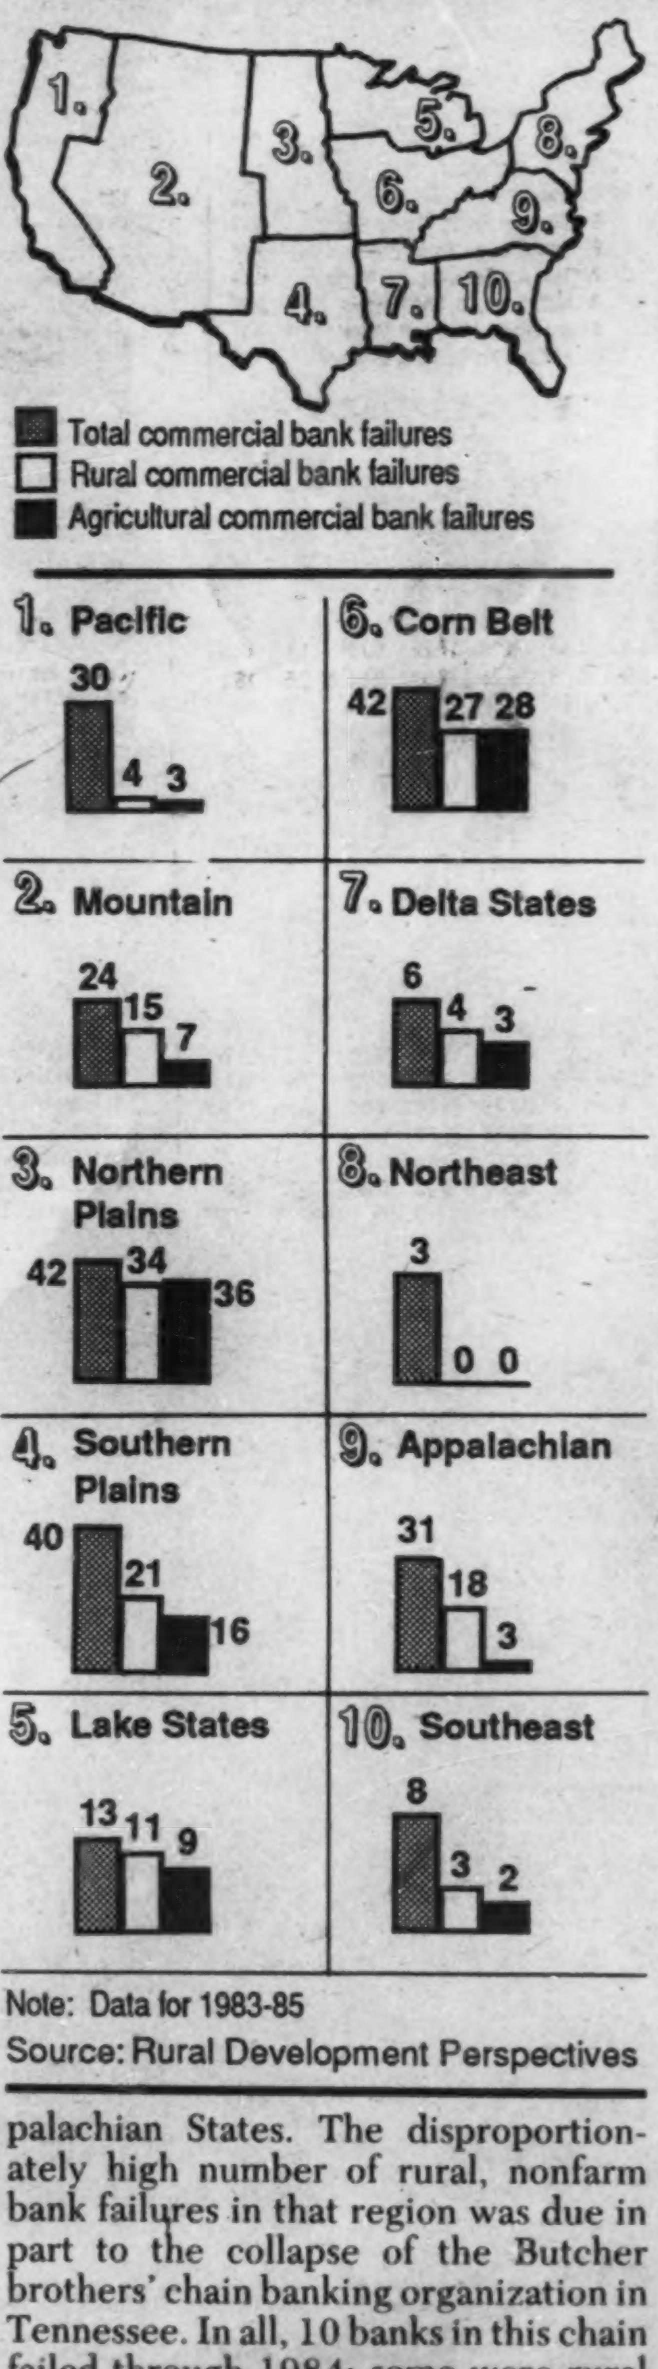
A Look at Banks that Fail

Over the 1983-85 period, 239 commercial banks failed; 137 were rural, and 107 specialized in financing agricultural activity. Bank failures in the Corn Belt and Plains States accounted for over half of all failures, about three-fifths of rural bank failures, and almost three-quarters of agricultural bank failures. No rural or agricultural banks failed in the Northeast.

The geographic distributions of failed agricultural and rural banks are similar, with the exception of the Appalachian States. The disproportionately high number of rural, nonfarm bank failures in that region was due in part to the collapse of the Butcher brothers' chain banking organization in Tennessee. In all, 10 banks in this chain failed through 1984; some were rural but none were agricultural banks.

Most Rural Bank Failures Are in the Nation's Heartland



Note: Data for 1983-85
Source: Rural Development Perspectives

State laws that restrict bank branching have been blamed as major contributors to bank instability and failure, yet the distribution of failures over the period among unit banking, limited branching, and statewide branching states provides inconclusive evidence. While the proportion of bank failures to all banks is somewhat higher in unit-banking states than in limited branching and statewide branching states, many unit-banking states are in regions hit hardest by agricultural problems. As a result, the role of state branching laws contributing to bank failures is unclear.

Only nine banks owned by multibank holding companies failed from 1983 to 1985. However, the proportion of failures that were one-bank holding companies rose markedly, from 14% of all bank failures in 1983 to 54% in 1985. Multibank holding companies that acquire failed banks also have a history of making relatively more loans than other types of acquiring banks. The relationships between competition, corporate structure, and safety of the banking system should be considered in state policy debates regarding multibank holding companies.

The small size of most failed banks since 1982 is one reassuring datum on the stability of the national banking system. About 80% of the failed banks had less than $50 million in assets, and fewer than 5% had over $300 million in assets at the time of failure.

Several characteristics set failed commercial banks apart. Data for the year preceding failure show that the typical failed bank was undercapitalized and attracted a high-cost, unstable deposit base to support large, risky loan portfolios. What is unclear is whether the banks adopted those strategies in response to earlier problems and the threat of failure, or as their long-term corporate plans.

The FDIC usually diagnoses the causes of bank failure as a combination of bad management and poor loan quality. But classifying a primarily agricultural loan portfolio as a poor management decision seems unreasonable when such portfolios had been highly profitable for decades preceding 1982. The FDIC has recently begun to recognize that a depressed local farm economy has contributed to a number of failures.

Portfolio choices made by failed rural banks do raise questions about how rural banks can best serve rural communities. Loan portfolios heavily tilted to agriculture and related rural activities are practically predetermined for many small rural banks wishing to serve local loan needs. The review here of failed bank characteristics suggests that such a strategy, if coupled with the practice of holding a high percentage of bank assets as loans, may be unsafe and linked to a higher probability of failure.

Thus, the long-term interests of rural communities might be served better if rural banks that adopted such a high-risk strategy adjusted their portfolios to include fewer local loans and more low-risk nonloan assets. Many sound rural banks are now doing just that.

How the Community Can Be Affected

The effects of a bank failure are intensified for rural communities with relatively few banks. If large local depositors, including the area's major businesses, lose uninsured deposits, economic conditions in the community may worsen. Insurance coverage for large depositors depends on the liquidation method applied to the failed bank by the FDIC, but deposits up to $100,000 are available almost immediately in all cases.

Rural communities lose the most banking services when a failed bank is closed and its insured deposits paid off by the FDIC (the payoff method). Although only 33 out of the 239 failed banks were liquidated in this manner in 1983-85, 24 of those 33 were rural. In 1985 alone, 17 rural banks in Kansas, Nebraska, Oklahoma, and Texas were lost through payoffs.

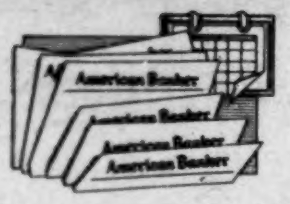
Flashbacks

What made news in the American Banker on this day...



50 Years Ago

- The general counsel of the Federal Deposit Insurance Corp., L.E. Birdzell, tentatively ruled that interest regulations did not apply equally to savings accounts in commercial banks and mutual savings banks. The issue was raised when Emigrant Industrial Savings Bank announced a bill-paying service, called the "Budget Savings Account," which allowed a depositor to pay bills through a savings account that earned interest. Under Regulation IV, which covered interest payments on savings accounts in commercial banks, use of a savings account for such a service as Emigrant's would be in violation of the regulation. Mr. Birdzell's opinion, however, held that depositors in mutual savings banks received "dividends . . . not interest."
- Members of the Independent Bankers Association of Northern California were in full support of forming a national association of independent banks.

20 Years Ago

- Comptroller of the Currency James J. Saxon claimed that S&Ls operated sufficiently within the scope of the "banking business" to fit the definition of "state banks" for purposes of branching. Mr. Saxon made the remarks in a brief filed in a Wisconsin branch-banking case. The case could have opened the door to national bank branching in nonbranching states that permitted state-chartered S&Ls to open branch offices.

10 Years Ago

- Bank of America told the Department of Health, Education and Welfare that it would withdraw from the federally insured student loan program unless major changes were made by the spring of 1977. Banks had complained of gross inefficiency, poor communications, and inept management that made federally insured loans a drain on their profits.
- The American Bankers Association filed a brief with the Supreme Court supporting the Comptroller of the Currency's challenge to lower court rulings that customer-bank communication terminals were branches. It brought the group in direct confrontation with the Independent Bankers Association, which supported the rulings.

5 Years Ago

- The Federal Home Loan Mortgage Corp. received 2,000 requests for information about its mortgage swap program. The program allowed lenders to exchange low-yielding mortgages for Freddie Mac mortgage participation certificates. The certificates had slightly lower yields, but higher liquidity.
- American Express Co. announced plans to merge its card and traveler's check divisions into a new, broadly named consumer financial services group. The single group would permit both consumers and financial institutions to conduct card and traveler's check business through one organization within the firm's stable of products and services.

1 Year Ago

- Crocker National Bank was fined a record $2.25 million by the Treasury Department for failing to report nearly $4 billion in currency transactions. Treasury said the San Francisco bank was found since 1980 to have more than 7,800 violations of the Bank Secrecy Act, most of which involved six Hong Kong banks.
- Standby letters of credit increased 25% in 1984, to $132 billion, making them the fastest growing item on or off a bank's balance sheet, according to an American Banker survey. Citibank had the largest dollar amount of the controversial item, with $19.9 billion.

— Kenneth J. Hicks

Failures . . .

➵ Continued from Page 1

regional office in Kansas City, Mo. "Certainly the FDIC is going to be receptive to dealing with situations that would make sense and be cost effective." Noting that the two cases of open-bank assistance in his region so far this year involved banks under new management and ownership, he said that "one of our criteria would be that we would not assist those who created or added to the problems."

Adds another FDIC official, "I think our board has shown a willingness to consider any alternative. I don't know if we'll ever get to the point where a majority of the failing banks will be handled on an open-bank basis, but I suspect a significant minority of them will be."

Several more applications for open-bank assistance are in various stages of consideration, according to sources. One highly publicized plan under FDIC consideration is a request for funds to ease the acquisition of troubled banks owned by BancTexas Group Inc. in Dallas.

Among the chief problems the FDIC is working to overcome is a reluctance or an inability of many healthy institutions to bid on failed banks. In some cases, the reason might be restrictive branching laws, such as in Kansas, that would make an acquisition of a failed bank costly or burdensome for the acquirer. In other cases, it might be the limits on getting a buyer from out of state. Or it might be pure economic or competitive reasons that make a buyer hard to find.

To help solve the problem, the agency is sweetening its deals. One method is the use of a note receivable as an alternative to giving cash assistance to a bidder for a failed bank's deposit liabilities and assets.

Usually, the FDIC will provide a cash advance to the bidding institution to help the bidder pay for the failed bank's loans and other assets. But the FDIC found out that many healthy institutions, especially in depressed areas, didn't want the additional cash. Demand for quality loans was low, plus the rates of return on their investments also would be down. So instead of the cash advance, the FDIC in some cases would give the winning bidder a note receivable. This would be at a rate generally higher than the bank could earn on other government investments. Also, the bank could draw down cash if the loan demand existed.

"We feel it has very positive results," says the FDIC's Mr. Thacker. "We've been attracting more interest, and we believe it's also had some impact on the amount of money that's being bid."

The note program was started by the FDIC when the $42.5 million-deposit Commercial State Bank, Pocahontas, Iowa, was closed on June 27. To aid the purchase of the bank, the FDIC gave a note receivable to Citizens State Bank, Pocahontas, a newly chartered subsidiary of Carroll County Bancshares Inc., Carroll, Iowa.

Another enticement offered to bidders by the FDIC in dire cases is the so-called "negative premium." This means that the FDIC pays the acquiring institution a sum to take over the failing institution. This is the reversal of usual procedures in which the acquiring institution pays a premium to the FDIC.

The FDIC used this in its July assistance package for First Interstate Bancorp's acquisition of the failed First National Bank and Trust Company of Oklahoma City.

Also, the FDIC is said to be more willing to keep negotiating with potential acquirers of failed banks in order to avoid costly payoffs of insured deposits. One FDIC spokesman says, "There were a couple of cases where we announced a payoff because no bids were received, and then, before we actually began doing a payoff, the staff negotiated harder or found a buyer and turned the situation around."

The FDIC also is looking for ways to minimize its time and cost in the business of disposing of the assets of failed banks. For example, the agency has been working on ways to resell assets in bulk packages. In July, the board adopted a policy to permit acquiring banks to purchase failed farm banks' substandard loans at discounted prices. And in the case of the failure of First National in Oklahoma City, the FDIC agreed to retain assets of the failed bank with a book value of $48 million, but the acquiring institution, First Interstate, will service a portion of the loans and will be rewarded by the FDIC for good recovery rates.

According to FDIC officials, the agency is continuing to work to add examiners and improve surveillance techniques. It also is urging state governments to ease branching laws that hinder their ability to find buyers. And it is seeking broader powers from Congress, such as the authority to merge failing banks on an interstate basis and set up "bridge banks" in which the agency would run an institution until a suitable buyer could be found.

As for the situation with the thrift industry, the Federal Savings and Loan Insurance Corp. last year had 10 closings. In addition, there were 22 assisted mergers — cases in which some FSLIC financial assistance was provided because the problem institution was either insolvent or approaching insolvency. Add to this the 25 thrifts under the FSLIC's "management consignment program," in which the agency assigns management of troubled thrifts to healthy institutions.

Through Aug. 20 of this year, there have been 16 closings, 13 FSLIC-assisted mergers, and 23 thrifts placed in the management consignment program.

Of all those thrifts put in management consignment, four were merged with other institutions and two were closed. ■

Acquisition Process May Hurt Borrowers at Failed Rural Banks

➸ Continued from Page 4

The number of banks remaining in the community after these payoffs is the best gauge of the damage inflicted on availability of local banking services. A rural Nebraska county, after losing two, one-office banks, had only three banks left, and a rural county in Kansas was left with only two banks. Most affected counties had four to nine surviving banks operating within their borders, but some rural towns lost their only bank when the FDIC used the payoff method.

Because the FDIC has had difficulty recently securing acceptable acquisition bids for failing rural and agricultural banks, the number of rural counties and communities that lose banking services is expected to increase.

Regardless of the liquidation technique employed, credit availability in rural communities affected by bank failures is the major long-term issue. Debtors with loans outstanding at failed institutions usually find that their loans have been sold to the acquiring bank, or neighboring banks in the case of payoffs or deposit transfers. Even debtors with good loan records will have to establish a new relationship with a loan officer.

Debtors with troubled loans are probably hurt the most. An assuming bank does not purchase such loans; the FDIC is left to administer them. The FDIC tends to be strict with problem debtors since its legal responsibilities are to the failed banks' insured depositors, depositors with uninsured balances, and the bank's bondholders and shareholders.

The FDIC liquidators do work with borrowers to try to devise an acceptable plan to retire their debt in an orderly fashion. But many problem debtors, who may have been able to renegotiate their loans with the now-defunct bank, face FDIC-ordered foreclosure. Marginally qualified borrowers in a community where a bank has just failed may find it difficult to secure credit if the community has few other lending institutions.

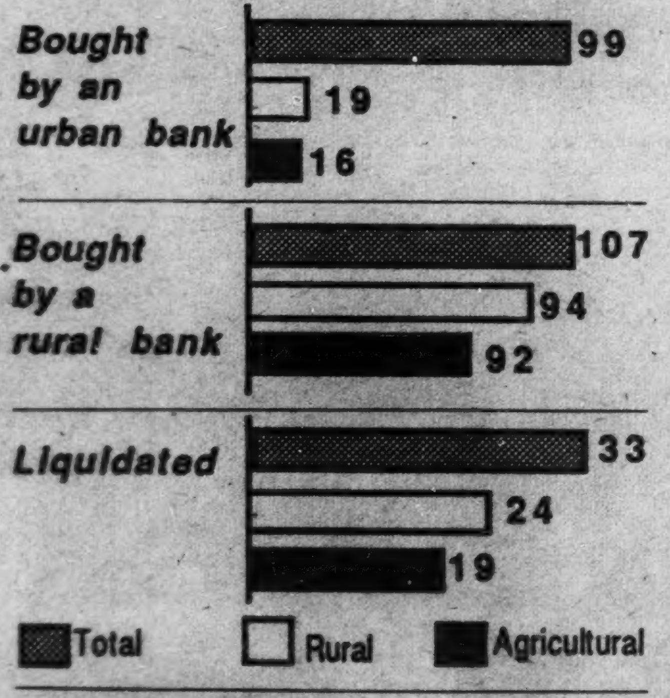
What the New Owners Are Like

The FDIC insures that an assuming bank is financially healthy and well capitalized through a cash injection that equals the difference between the acquired liabilities and assets (less the price paid to the FDIC for the bank). The acquiring bank must provide sufficient capital in the form of owners' equity.

The issue of control, however, dominates the disposition of failed rural commercial banks. Communities are concerned that big "outsider" bank organizations may drain local funds for use elsewhere in spite of the large FDIC cash injection. If the new bankers do not understand local market conditions, they may offer insufficient credit or unfavorable loan terms. Reduced competition in local markets is also possible if a former competitor takes over the failed bank.

Whether the failure-acquisition process lessens "local" control of a bank's lending decisions is difficult to determine on the basis of public data. Control may or may not be affected if a larger bank organization acquires a failed institution, but the fear of "outsider" control is likely if the failed institution: a) becomes a branch of a larger urban-based bank, b) is acquired as an affiliate (or the branch of an affiliate) of a large multibank holding company, or c) is taken over by individuals who control a chain of other independent banks.

What Happened to Failed Banks 1983-1985

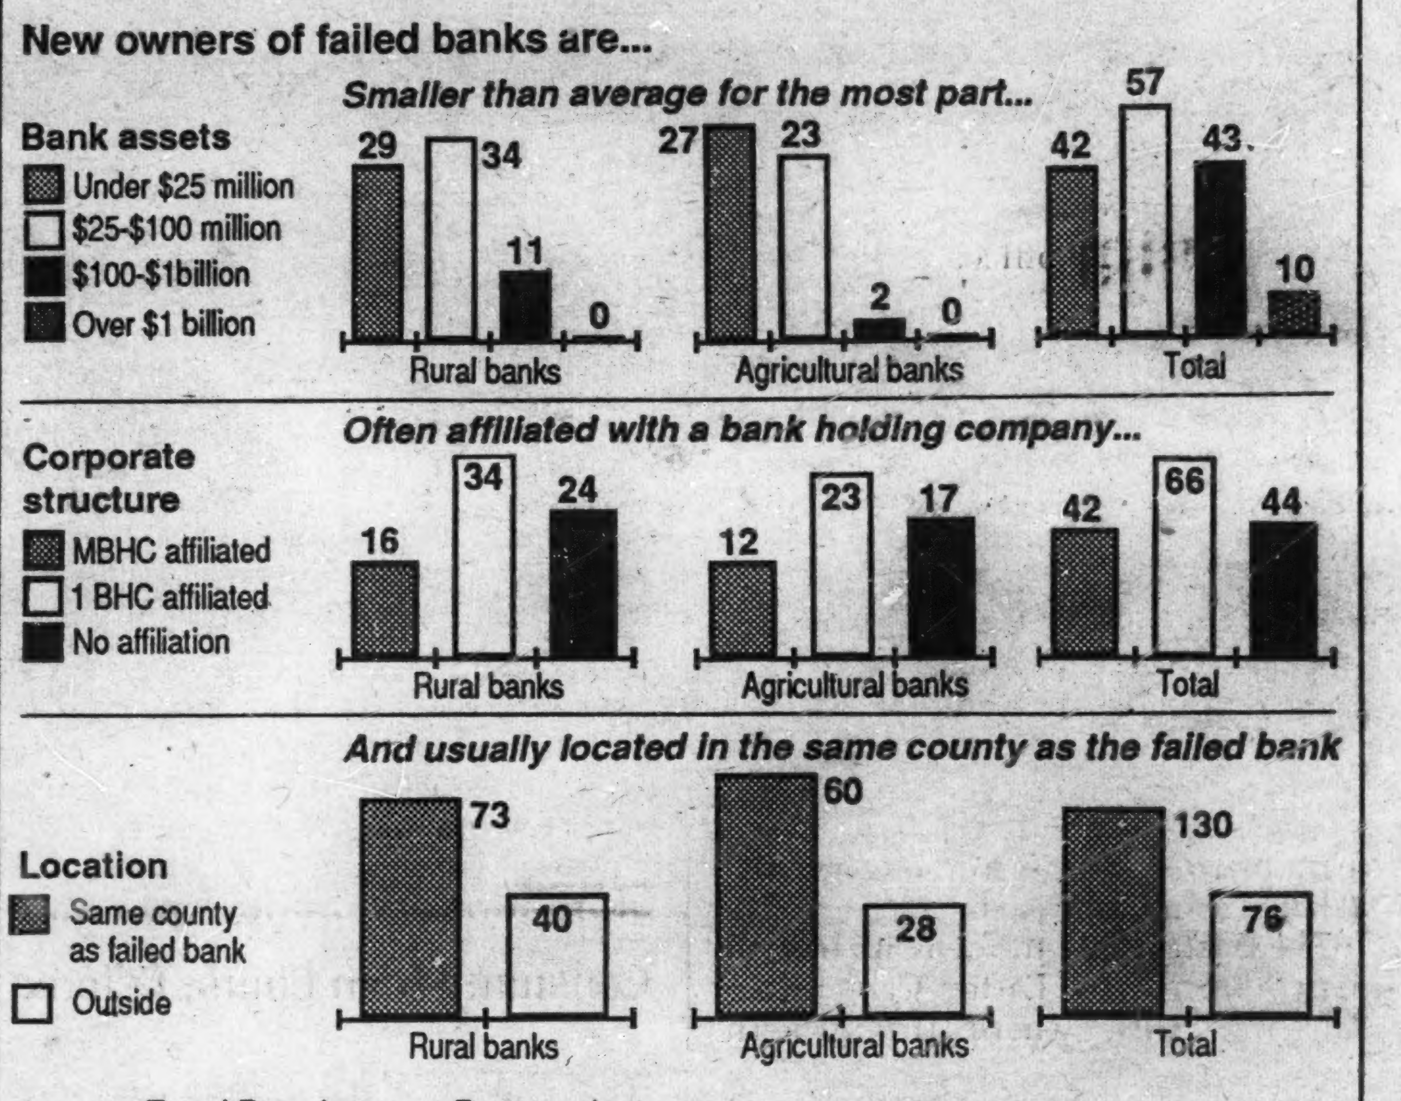


1983-85 Data
Total commercial bank failures: 239
Rural commercial bank failures: 137
Agricultural commercial bank failures: 107

Source: Rural Development Perspectives

Fears of big bank empire-building through failed bank acquisitions appear unfounded but cannot be dismissed. Of the 196 commercial banks that acquired failed banks since 1983, 105 were slightly larger than the failed banks they purchased. More than 25% percent of assuming banks had total assets under $25 million, while 85% percent of assuming rural banks had total assets below $100 million prior to acquisition. For assuming agricultural banks, about half had total assets under $25 million, and 96% had assets of less than $100 million. Only one failed bank had assets in excess of $1 billion, yet 10 acquiring banks' assets exceeded $1 billion. None of these large banks was located in a rural area or specialized in agricultural finance.

What Kind of Banks Acquire Failed Banks?



Source: Rural Development Perspectives

More than two-thirds of the acquiring banks were associated with holding companies, with multibank holding company affiliates accounting for a significant portion of the total. That proportion is similar to the national average. The average acquiring multibank holding company owned 12 commercial banks after acquisition. Holding companies are not using acquisitions of failed banks to expand their national banking market share. Moreover, unless expressly permitted by state law, holding companies cannot expand across state lines.

Since 1983, 44 independent banks and 66 one-bank holding companies have acquired failed banks, over half of which were rural. While specific data are lacking, chain banking organizations are believed responsible for most of those acquisitions. Most chains are small, but some control more than 30 banks.

Location of Acquirer Important

The location of the acquiring bank is also important in measuring the quality of service provided to local banking markets. State law often requires that acquiring banks be located in the same state as the failed institution. In fact, of the 206 failed banks purchased by another bank during 1983-85, 130 were acquired by a bank headquartered in the same country as the failed bank. Only one rural bank, in Oregon, was acquired by an out-of-state bank.

Another important determinant of the purchasing bank's location is its age. All but five of the 89 banks created for the sole purpose of acquiring a failed bank were headquartered in the same county as the failed bank. Failed bank purchases by previously existing banks, on the other hand, were more likely to be in a different county; 61% of these banks were headquartered outside the failed bank's home county.

Fewer than 20% of the failed rural banks were acquired by urban-based banks. Moreover, urban money center banks did not acquire any small rural banks that failed. Only one urban bank with assets over $1 billion acquired failed rural banks. Headquartered in Portland, Ore., it purchased two failed small rural Oregon banks. With roughly $5.6 billion in assets, it is not considered one of the nation's money center banks.

Almost all of the remaining 14 urban banks that acquired failed rural banks over this time period were somewhat larger than the average commercial bank, but all were considerably smaller than money center banks. The average bank has about $117.5 million in assets, while assets of the acquiring urban banks (excluding the Oregon bank) ranged from $15 million to $655 million and averaged $247 million.

A basic community issue for rural areas regarding the acquiring banks is their viability in the local market. The new banks appear to be well-run, solid institutions, as illustrated by below-average ratios of loan losses (net loan chargeoffs) to total loans and adequate to above-average capitalization rates. Their relatively high ratios of net income to equity capital illustrate the profitability of their operations. Below average loan-to-asset ratios may indicate a conservative approach to making loans. This tendency is even more pronounced for independent acquiring banks, which have loan-to-asset ratios six to 10.1 percentage points below the average of comparable banks.

The FDIC, with the involvement of the Board of Governors of the Federal Reserve System in appropriate cases, apparently selects acquiring banks that are sound and have a high probability of safe future operation.

Tighter Credit Conditions?

The conservative behavior of rural banks was sometimes thought to restrict rural development. If so, the conservative nature of acquiring banks, especially those not affiliated with a

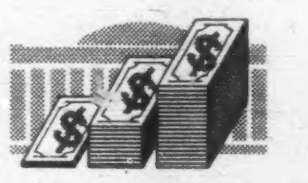
California's Home Savings Passes $20 Billion Deposit Mark, Leads U.S. Thrifts at Midyear

By MARK BASCH

NEW YORK — Home Savings of America FA, Irwindale, Calif., was the only thrift institution to pass the $20 billion mark in deposits during the first half of 1986.



Thrifts

The principal subsidiary of H.F. Ahmanson & Co. had a $1.1 billion gain in deposits since yearend, an increase of 5.9%. Meanwhile, the second and third largest thrifts, Great Western Savings, Beverly Hills, Calif., and American Savings & Loan Association, Stockton, Calif., had declines in deposits from yearend.

Overall, the combined deposits of the top 100 thrifts grew $16.4 billion, or 4.2%, from yearend to $407.7 billion.

These are some of the findings of the *American Banker's* midyear ranking of the 100 largest thrift institutions in the United States, ranked by deposits.

There were no special developments to account for Home Savings' large deposit growth, but the thrift has opened eight branches since yearend, bringing its total to 304 branches.

Top 100 Thrifts in Deposits
Page 20
Security Pacific Offers Investors Mortgage Prepayment Analysis
Page 30

Salomon Brothers Inc. analyst Robert Chaut noted that the company has reduced its dependence on Federal Home Loan Bank borrowings since yearend while it increased its dependence on deposits as a source of funds. Those borrowings declined from $1.7 billion at Dec. 31 to $503 million at June 30.

Great Western's deposits fell $339 million from yearend to $17.1 billion. In its second-quarter earnings report, the thrift's parent company, Great Western Financial Corp., said it continued to pursue a strategy that allowed higher-rate certificate of deposit accounts to run off during the quarter. That strategy helped the company reduce the cost of customer accounts to 7.55%, compared with 8.12% at yearend.

Jonathan E. Gray, an analyst with Sanford C. Bernstein & Co., said in a recent report on Great Western that the company is trying to restructure its

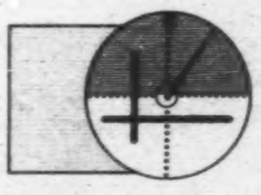
Life After International Lending

Senior VP Outlines Marine Midland's Global Banking Alternatives

By GORDON MATTHEWS

NEW YORK — Marine Midland Bank dropped most of its international lending last year and has since found profitability in other parts of global banking. It is an apparent success story at a time when other banks are seeking ways to keep up their international presence.



Corporate Strategy

How did Marine do it? By focusing on international correspondent banking activities denominated in dollars — funds transfer, letters of credit, cash letters, collections, and cash management services — and by coordinating its worldwide strategy with its parent bank, the Hongkong and Shanghai Banking Corp.

Early last year, after a major strategic study, Marine decided to shift gears, de-emphasize lending, and focus on a segment of global banking that other institutions have left or avoided because they lacked the necessary volume of activity to generate profits.

Providing services to Hongkong Bank's 1,100 branches in 55 countries has provided Marine with the volume base on which to grow. This year, the bank expects to harvest a profit of $2 million, net after taxes, from activities that were previously money losers.

"We went through a reassessment of our wholesale banking activities with the idea that we wanted to look at those businesses in terms of their potential for providing an acceptable return on

Gains Outweigh the Pain Involved in Conversion

Moving from mutual to stock ownership is arduous, but thrifts needing capital may reap long-term benefits.

By Mark Basch

"IT'S LIKE HAVING your first child. You forget a lot about the pangs and remember the pleasures."

Converting a thrift institution from mutual to stock form of ownership is a long and arduous task, as John T. Morgan, chairman of New York's American Savings Bank, FSB, points out. But roughly 470 thrifts that have converted in the last decade to raise new capital have found that they can reap rewards from the process in the long run.

Most savings and loans and savings banks formed before 1975 were mutual institutions, which are owned by their depositors and borrowers. A relatively small number of institutions were formed as stock institutions.

In 1975, when the Federal Home Loan Bank Board first gave thrifts the opportunity to convert from mutual to stock ownership, only 14% of the nation's thrifts were already stock institutions, according to statistics compiled by Keefe, Bruyette & Woods, Inc.

But 11 years after Congress gave the Bank Board the authority to allow conversions, stock institutions dominate the industry. By the middle of 1986, roughly 31% of all institutions were in stock form, and those institutions held about 52% of the industry's assets. In fact, 14 of the country's 15 largest thrifts are now in stock form. The one holdout — Goldome FSB — reportedly is considering going public soon.

The most compelling reason for a thrift to convert is the need to raise capital. But as the Keefe, Bruyette report on conversions points out, there are several other advantages to becoming a stock institution, including:

- It allows access to capital markets for future issues of stock and convertible securities; it also may provide better access to credit markets.
- The additional capital allows a thrift to grow and could help the institution restructure its mix of assets and liabilities.
- The stock can be used for future acquisitions.

Disadvantages

But, there are negatives to be considered also:

- The conversion leaves a thrift open to a possible loss of control by management in the future.
- Management must account for its actions to stockholders, and also is burdened with increased reporting and regulatory requirements.
- The converted institution's value is subject to the volatility of the stock market.

According to Keefe, Bruyette, "the ability to access additional capital tilts the scale overwhelmingly in favor of conversion."

But what happens after the decision is made to convert? There's no fairy godmother to magically change the thrift into stock form overnight. What follows is a lengthy process, which begins when the thrift sends an application to its regulator:

STEP 1: Making the Decision

It's easy for a thrift to decide that it needs additional capital, but not so easy to pick the right time to raise it. Several large New York savings banks began the conversion process in 1983, including Goldome, CrossLand Savings FSB, the Dime Savings Bank of New York FSB, and Empire of America FSB in Buffalo. All four took the first step — filing an application with the Bank Board — that year, but the first of those institutions to actually complete the conversion was CrossLand, two years later in October 1985.

The conversion process is long, but not that long. All four thrifts decided to table their applications in 1983 because of changing conditions in the stock market.

"The general market for thrifts going public went south," said James R. Kerr, senior vice president of CrossLand.

"We had to closely monitor the market," he said, and by the spring of 1985, "we started to find the market more favorable."

By the fall, when CrossLand actually offered its stock, the market had fallen again. "We came out very cheap," said CrossLand chairman and chief executive officer Luke A. Baione. "The bank didn't raise as much capital as it liked, but the stockholders have done well," because of the sharp rise in the stock price after the offering.

> "*In our view, the ability to access additional capital tilts the scale overwhelmingly in favor of conversion.*"

Stock prices of recently converted thrifts skyrocketed last fall, when CrossLand completed its conversion. CrossLand stock was offered initially at $9 a share, and the price reached a high of $24.75 at one point. The stock has since settled down to $17.13 a share as of the beginning of August, still about 90% above the initial offering price.

The conversion market has settled down since last fall, and is now running pretty much in line with the general thrift stock market.

"It has not been the gold mine that they had been for some time," said Robert Chaut, an analyst at Salomon Brothers Inc. He said that 39 major conversion issues (stock offerings of more than $15 million) offered since August 1985 have risen an average of 23% from the initial offering. The general thrift stock market is only slightly behind, at 20%.

One of the reasons for the cooling off of the conversion issues in the stock market has been the initial price, Mr. Chaut said. "They're being priced much higher in the marketplace."

Initial offering prices are running about 65% to 75% of book value now, compared with about 55% last year when the market was hot.

STEP 2: Independent Appraisal

While the application is pending at the Bank Board or other regulator such as the Federal Deposit Insurance Corp. or state banking department, an independent appraisal of the thrift is done by an outside firm. CrossLand went to Trident Securities Inc., a Raleigh, N.C., firm that has done appraisals for about 60% of the thrifts that have converted around the country, according to R. Lee Burrows Jr., vice president of the company.

During the appraisal, "a very thorough analysis is done of the institution," said William M. Moore Jr., chief executive officer of Trident. "In effect, it's a due diligence to make sure you know everything."

After the analysis, Trident sets a price for the offering by comparing the institution to other similar thrifts that are actively traded in the public markets, Mr. Moore said.

The appraiser sets a price, which can be adjusted up or down by 15% before the conversion is completed, according to Bank Board regulations. The regulations also require that the appraisal be updated at least once.

Thrifts generally accept the decision of the independent appraiser, but occasionally an institution may try to shop around for a better price. "It's rare, but it happens," Mr. Moore said.

"We were fired from one deal when we refused to do an appraisal at a level they insisted," he said, adding that the underwriter for the offering backed up Trident when the thrift tried to use the underwriter as an appraiser.

He added that the Bank Board has to approve appraisals of thrifts that it regulates, and that the Bank Board appraisal staff does a good job of determining a fair price for a conversion offering.

For the most part, Mr. Moore said, the boards of directors of mutual institutions are willing to accept the decision of one appraiser. "They want it to be fair," he said. "First and foremost, they want the process to be above reproach."

STEP 3: Proxy Solicitation

Once the appraisal is done and the conversion application is approved by regulators, the institution has to begin a proxy solicitation to its customers. "It's one of the three or four things that probably create the most amount of work and effort," said Mr. Kerr of CrossLand.

Depositors and borrowers of the institution have two decisions to make during this period, he said: whether to vote yes to approve the conversion and whether to purchase stock themselves through a subscription offering.

"We had to make our customers aware of what CrossLand was about to do, and why it was important. We had to encourage our customers to vote yes," he said.

CrossLand had about five weeks from the time of approval to get its customers to vote on the conversion. Employees of thrifts in the conversion process are required by the Bank Board to observe a quiet period, during which they can say very little about the stock offering. Customers are encouraged to consult their broker or investment adviser for advice on purchasing stock.

But the employees do not have to keep quiet about the approval vote. CrossLand used a heavy promotional push to get customers to vote in favor of the conversion, without offering advice on whether customers should purchase the stock. "We in no way implied whether purchasing stock was good or bad," Mr. Kerr said.

Besides the usual newspaper advertising urging customers to vote yes on the conversion, CrossLand also used branch displays. Customers waiting in line at branches could watch a short television presentation about the conversion and why they should approve it. The ads sought to assure customers that their vote was important and that conversion would not affect their relationship with the institution.

"There is a concern of many depositors who use the bank as a place to invest their savings and are not [familiar with] the stock market that their savings would be jeopardized by conversion," said American's Mr. Morgan.

CrossLand also used the telephone in its proxy solicitation, concentrating on customers who had 100 votes or more. Under Bank Board regulations, customers had one vote for every $100 on deposit up to $40,000 (400 votes), and one vote for all loans they had. The regulations have been changed since CrossLand's conversion to allow for a maximum of 1,000 votes on deposits.

CrossLand made more than 75,000 phone calls in about three weeks, Mr. Kerr said.

Employees of the institution are also educated in the conversion process. CrossLand held three-hour meetings to train its employees and help them answer customers' questions about the process.

CrossLand used three investment banking firms to handle its underwriting and it also put together a "road show" during this time to meet with other brokers and large institutional investors. "We provide them with a quick profile of who CrossLand is and give them an opportunity to ask any questions about the bank," Mr. Kerr said.

Coordinating personnel was the most difficult part of the conversion process, he said. "That to me is the tough part of the job — to assemble a very effective team in the organization and get the support of effective outside vendors."

To gain approval for the conversion, a thrift must get approval from a majority of votes eligible to be cast. In CrossLand's case, it got 57% of the eligible vote, but 97% of the actual votes cast were in favor of conversion.

STEP 4: Completing the Job

Once the customers approve the conversion, the stock can be sold through a subscription offering to customers, employees, and members of the thrift's community. Any remaining stock is sold to the general public by the underwriters.

That would seem to be the end of the conversion process, but there's one more step: An investor relations department has to be set up.

Mr. Kerr said that the department has to have two sides, one for its shareholders and one for Wall Street. And at the end of 1985, CrossLand had to come up with its first annual report. "The annual report is the single most important piece of shareholder communication that a company has," he said.

Mr. Baione agreed that the conversion creates a lot more work for thrift executives, but it's a step that has to be taken to remain competitive, especially for a large thrift like CrossLand.

"From a management point of view, the simplest type of operation to have is a mutual," he said. "If you want to grow and want to expand the operation, you're going to have to go [the conversion] route." ■

Mark Basch is an American Banker staff writer.

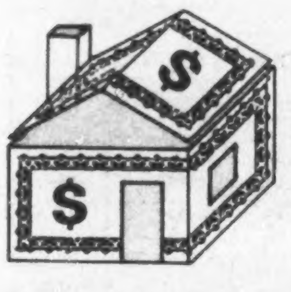
The bulk of the data are from American Banker's questionnaire which asks for total deposits and savings accounts, excluding all escrowed accounts. This preliminary list of the top 100 is based solely on the thrifts that responded to the questionnaire by production deadlines. Total deposits and savings accounts include: non-interest earning demand and NOW accounts; accounts earning in excess of regular rate in certificates with denominations of $100,000 or more and in other accounts; and accounts earning at or below regular rate in interest-earning NOW accounts, in passbook accounts, and all other accounts, except escrowed accounts. **Regulatory Net Worth** includes permanent, reserve, or guarantee stock; paid-in surplus; qualifying mutual capital certificates; income capital/net worth certificates; qualifying subordinated debentures; appraised equity capital; reserves; undivided profits; and net undistributed income. **(a) — Charter Types:** 1-Mutual Savings Bank; 2-Stock Savings Bank; (3)-Mutual Savings & Loan Association; (4)- Stock Savings & Loan Association. **(b) — Insurance Types:** 1-FDIC-Insured; 2-FSLIC-Insured; 3-State Insured.

Security Pacific Offers Investors Mortgage Prepayment Analysis

By ANDREW ALBERT

NEW YORK — Security Pacific Corp. said its sale this week of $89.3 million in mortgage-backed securities was the first private issue to offer investors quarterly analysis of prepayments on the underlying mortgages.



Mortgage Securities

As witnessed in recent months, mortgage prepayments can spoil the investment strategy of those who hold securities backed by a pool of mortgage loans. A record number of homeowners rushing to refinance their loans this year caused decreases in the yields on mortgage securities and in the expected life of those certificates.

Consequently, investor demand for prepayment analysis has grown, and several firms have responded by peddling their prepayment research. Security Pacific officials say they are the first to provide such analyses for mortgage securities issued privately, rather than those issued by agencies, such as the Government National Mortgage Association, Federal National Mortgage Association, and Federal Home Loan Mortgage Corp.

Ron Cacciola, managing director of Security Pacific Financial Strategies Inc., said his firm's new service was distinct from others mainly because it offers prepayment analysis on privately issued mortgage securities. In addition, he said the quarterly reports, which will be mailed to certificate holders, would be the most comprehensive analysis of a mortgage pool's prepayment experience. There will be no additional charge for the quarterly reports, Security Pacific said.

The reports will examine the effects of prepayments on securities with specific coupon rates, on expected rates of return, and on the duration and expected average life of the securities. "The reports will offer a new way of seeing how pass-through certificates evolve over time," said Mr. Cacciola.

Security Pacific National Bank of Los Angeles originated the mortgages packaged into the new securities, giving its parent company, Security Pacific Corp., full access to loan information needed for an accurate prepayment analysis. Market participants said less information was available to firms studying the effect of prepayments on government-related agency securities, making accurate analysis more difficult.

"If you're originating the loans, you know what's in the pool and [prepayment analysis] is a lot easier," said David Jacobs, a researcher for Morgan Stanley & Co. who has helped design models for his firm's analysis.

Mr. Cacciola acknowledged that several other companies have for some time offered analysis of mortgage prepayments to those who invest in securities issued by Ginnie Mae, Fannie Mae, and Freddie Mac. He cited a service of *The Bond Buyer*, the *American Banker's* sister publication, which offers subscribers a computerized means of estimating monthly payments on mortgage securities based on various loan prepayment scenarios.

Security Pacific's newly issued, pass-through certificates, rated AA by Standard & Poor's Corp., were placed Wednesday with institutional investors, and Mr. Cacciola said similar issues are planned for the future. Mr. Cacciola would not disclose the number of investors participating in this week's issue — called Security Pacific National Bank Mortgage Pass-Through Certificates Series 1986-A — but said, "It was certainly less than 20."

The securities were structured by Security Pacific Financial Strategies and SP Mortgage Trading and Finance, both units of the holding company's merchant banking arm. Security Pacific is the nation's seventh largest bank holding company. ■

Home Savings Top Thrift in Deposits

➡ Continued from Page 1

liability portfolio to create a portfolio with longer maturities than the liabilities used in determining the cost-of-funds index in the 11th Federal Home Loan Bank district. Changes in many adjustable-rate loans are tied to changes in the 11th district cost-of-funds index.

If Great Western has a longer liability portfolio, its cost of funds will rise more slowly than the index, Mr. Gray said, offsetting the lag time in repricing the adjustable rate loans.

American Savings, the principal subsidiary of the Financial Corporation of America, has been decreasing its deposit base as part of a program to reduce its cost of funds and also reduce its reliance on institutional deposits.

American Savings' deposits fell $817 million from yearend to $16.6 billion at June 30. The thrift had a deposit decrease of $449 million in the second quarter, including $295 million in brokered deposits, according to a quarterly report filed with the Securities and Exchange Commission.

The thrift has also made two moves this year to increase its consumer deposit base. American Savings acquired six branches from other thrifts during the second quarter, which increased its deposits by about $157 million. In addition, since June 30, American Savings has completed the acquisition of 16 offices from Sears Savings Bank, Glendale, Calif., with about $580 million in deposits.

Financial Corporation Leads Assets

In terms of assets, the Financial Corporation remained the largest nondiversified thrift holding company as of June 30, with $29.2 billion in assets. H.F. Ahmanson was second with $28.2 billion, and Great Western was third with $25.3 billion.

Other notable findings among the top 100 thrifts include:

- Great American First Savings Bank, San Diego, jumped into the top 10 following its acquisition of Home Federal Savings & Loan Association of Tucson, Ariz. Great American, which was the 15th largest thrift at yearend, moved up to ninth at June 30 with $8.4 billion in deposits. Home Federal was the 135th largest thrift at yearend.
- Bright Banc Savings Association of Dallas made the largest gain of any thrift in the top 100, moving from 126th place at yearend to 38th place at midyear with $3.3 billion in deposits. Bright Banc completed the acquisition of a larger institution, Dallas Federal Savings & Loan Association, in January. Dallas Federal was the 95th largest thrift at yearend with $1.7 billion in deposits.
- Five of the 25 largest institutions were still in mutual form, but two of those have converted to stock form of ownership since June 30. The Dime Savings Bank of New York FSB went public earlier this month, and the Dollar-Dry Dock Savings Bank of New York converted to stock form in a private deal in July. Also, Empire of America FSB, Buffalo, N.Y., expects to complete its conversion to stock form in September. That will leave only Goldome FSB, Buffalo, and the Anchor Savings Bank FSB, Northport, N.Y., in mutual form among the top 25.

Overall, 67 of the top 100 thrift, with 74% of the deposits, were in stock form as of June 30.

- Deposits at 79 of the top 100 were insured by the Federal Savings and Loan Insurance Corp. The remaining 21 were insured by the Federal Deposit Insurance Corp.
- The thrifts with the highest net worth-to-asset ratios continued to be the three thrifts owned by Citicorp. Citicorp Savings of Florida, Miami, had a regulatory net worth ratio of 27.79%, Citicorp Savings, San Francisco, had a ratio of 18.59%, and Citicorp Savings of Illinois, Chicago, had a ratio of

New Capital Requirements for Thrifts Said to Make Swaps More Attractive

By RICHARD GOTCHER

The Bond Buyer

WASHINGTON — New capital requirements issued late last month by the Federal Home Loan Bank Board make interest rate swaps a more useful tool for struggling thrifts trying to reach required capital positions, according to Sharon L. Stieber, a former economist with the Student Loan Marketing Association.

Mrs. Stieber, now vice president of Barrentine Lott and Associates Inc. of Vienna, Va., a consulting firm that specializes in secondary mortgage market and other asset liability issues, noted that interest rates currently are at their lowest levels in the four years since swaps were introduced. As a result, she said, thrifts will be able to use swaps to their full advantage while locking in lower costs.

An interest rate swap is an agreement between two parties to exchange future flows of interest payments. One party agrees to pay the other at a fixed rate; the other pays the first party at an adjustable rate that is usually tied to the London interbank offered rate, a benchmark rate representing the amount paid by major European banks on dollar-denominated deposits.

Under the new Bank Board rules, the net worth requirement for thrifts will be raised to 6% from the current 3% over the next six to 12 years, based on individual cases. Mrs. Stieber noted that a large number of thrifts are having trouble meeting the current 3% net worth requirement and said interest rate swaps can help ease the transition to the new requirements by locking in lower interest rates.

"The new regulations recognize that when an institution has reduced its risk position, it needs less capital," she said. "Consequently, the Bank Board has allowed thrifts to reduce their capital requirements when they have reduced their risk by using hedging tools such as interest rate swaps, options, and futures."

Mrs. Stieber said swaps are more readily available to thrifts trying to raise cash than standard mechanisms involving the conversion or sale of subordinated debentures. Stock and bond

More Thrifts Converting to Stock Form as Values Soar

Special to the American Banker

CHICAGO — Thrift conversions to stock ownership, once limited to very large savings and loans, are now occurring "across the board" and the conversion values are increasing, said a savings industry accountant.

A disproportionate number of the thrifts converting to stock from mutual associations have occurred in the Northeast and Middle Atlantic regions, said Gary Scott, a partner in the Miami office of Deloitte Haskin & Sells and a member of the accounting firm's financial institutions task force.

In the mid-Atantic region, 37 thrifts converted to stock associations from mutuals, while 39 northeastern thrifts converted to stock form, including 18 in Massachusetts and 20 in Florida, Mr. Scott this week told the Key Issues Clinic for the Financial Managers Society, the professional group for financial business executives.

The value of the conversions also has increased, he said. The 11 conversions in the first half of 1985 averaged 76% of book value, while the 22 conversions in the last half averaged 110% of book value. The values of the 22 conversions during the first half of this year soared to 214.4% of book value, said Mr. Scott.

Most of the conversions have been standard ones, but the Federal Home Loan Bank Board is making it easier for institutions to qualify for modified or voluntary conversion, he said. Relatively few modified conversions, which are more for financially troubled institutions, have been done because the bank board keeps changing the regulations, he explained.

A change that will further increase the number of conversions is the streamlining in the use of employee stock ownership plans, and allowing employees to purchase up to 25% of the conversion stock, Mr. Scott predicted.

Commenting on the bank board's easing of regulations governing conversions, Richard A. Yingst, vice president of the financial managers group, said there was "a quiet bias on the part of the bank board against mutual associations."

Edmond Shanahan, president and chief executive officer of Bell Federal Savings and Loan Association of Chicago, said that modified conversions make sense for financially troubled thrifts because "anything that brings in more capital makes sense."

Mr. Shanahan, a director of the Federal Home Loan Bank of Chicago, also said "losses will be enormous" at troubled thrifts in some areas of the country, with some thrifts' problems not being resolved.

The earnings outlook for the industry nonetheless remains favorable, said James Christian, chief economist for the U.S. League of Savings Institutions. The thrift industry will be profitable despite the overall economy being "definitely on the lip of a recession," he said.

Mr. Shanahan said he favors the bank board's move to require generally accepted accounting principles because the board "got a lot of people in trouble with RAP [regulatory accounting principles]." ■

Surveying the Cash Management Horizon

Workstations Called 'Flop'; Fees Seen on Deposit Float

By TOM FERRIS

NEW YORK — The bankers who sell cash management services to U.S. corporations have spoken:

- Treasury workstations are a flop.
- Charges for deposit float are on the horizon.
- Fees for hourly account overdrafts may be coming.
- The need to provide companies with broad-based financial data is uncertain.

Those are some of the main findings of the *American Banker's* second annual survey on cash management. Seventy-three of the nation's 100 largest banks took part in a 20-question poll about the profitability of operating services and trends in the industry.

One finding was that corporate treasurers may be facing additional charges within the next few years.

About three out of five banks said they expect to see charges imposed on companies for deposit float, which occurs between the time when a check is deposited and the time when it is cleared. Items in the process of collection are booked as a nonearning asset and drag down a key bank profitability ratio, causing institutions to consider imposing a fee for it.

The respondents were less sure if banks will start charging corporate cus-

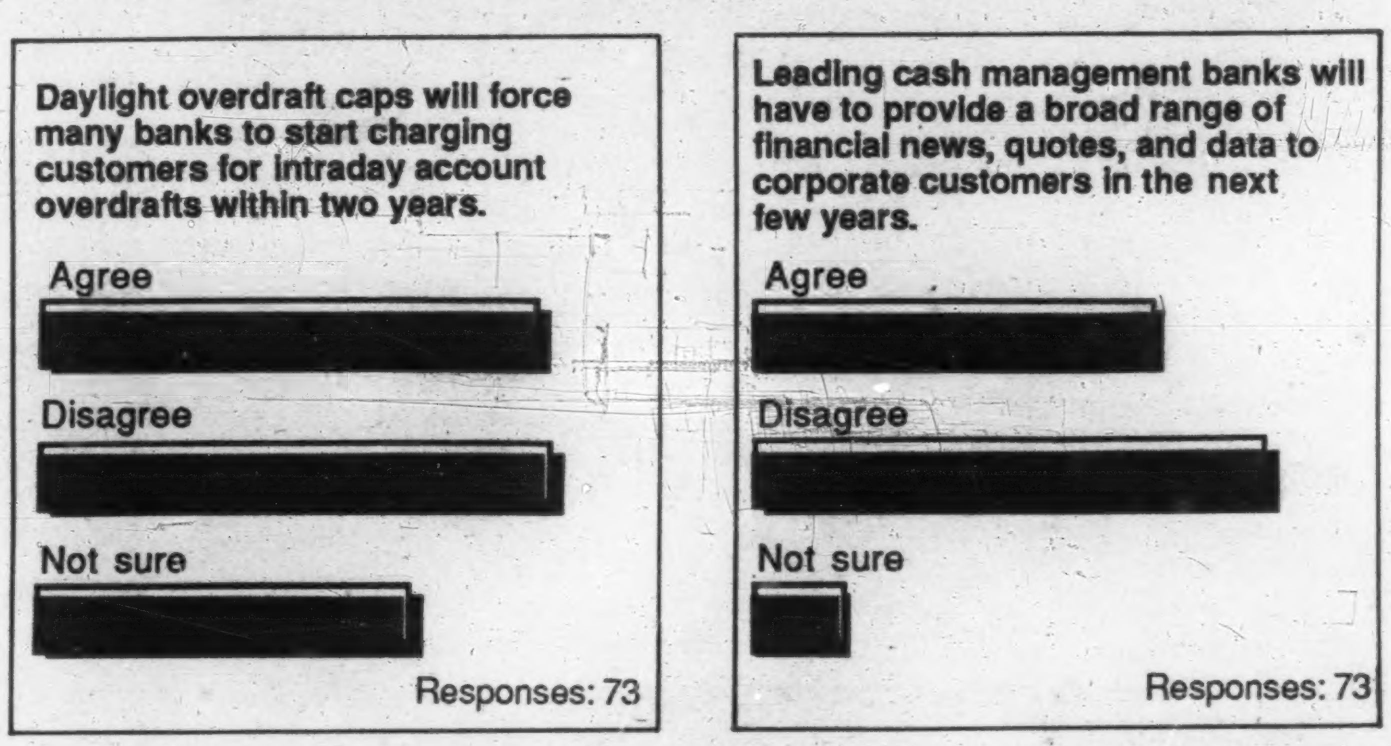
How Banks Feel About Some of the Issues



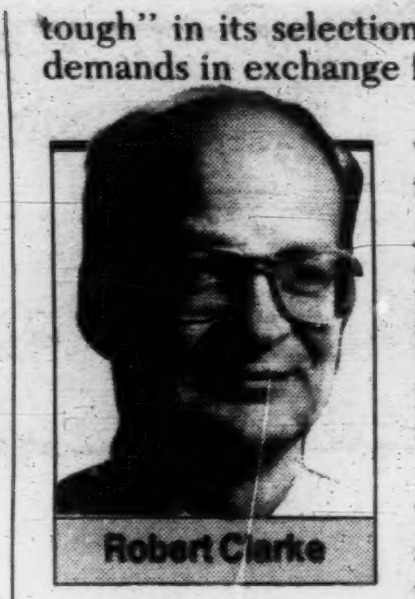
Comptroller Sees More Aid to Banks in Tough Days to Come

By JAY ROSENSTEIN

WASHINGTON — Comptroller of the Currency Robert Clarke said Wednesday he expects more banks to apply for federal aid to keep their doors open.

In a wide-ranging interview, Mr. Clarke said he supports the recent moves by the Federal Deposit Insurance Corp. to make assistance available to open banks, something rare in the history of the FDIC. Four banks this year have been given such assistance from the FDIC. The agency's Aug. 15, $130 million assistance plan for BancOklahoma Corp. is considered a prototype for future assistance packages.

But Mr. Clarke, who as Comptroller serves as a member of the FDIC's three-member board, added that he expects the government to be "very tough" in its selection process and its demands in exchange for the aid.



Robert Clarke

"I don't think we want to be in the position of just writing a lot of checks to banks just to keep them propped up," he said.

In the interview, the national bank regulator said "there is no doubt there is an interesting time ahead for the industry because we're definitely not out of the woods. There are still lots of problem banks out there.

"Fortunately, I think that a lot of the banks are dealing with their problems and some progress is being made, but it's going to be slow. You're going to see some low earnings and some more losses for some time to come, but that doesn't mean that most of the banks won't be able to withstand the pressure."

Mr. Clarke also disclosed that the FDIC is working on guidelines that could clarify what kinds of open-bank assistance the FDIC would consider and the possible terms of such aid. "To some extent, the rules are being made up as we go along because each deal is unique, each proposal has different features to it," he said. "The rules are sort of evolving and I don't know we

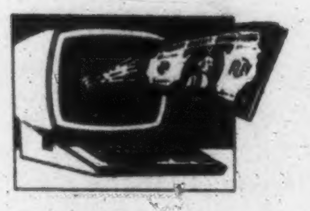
ISSUES AND ANSWERS

CASH MANAGEMENT REVIEW



Cash Management

When interest rates went through the roof in the late 1970s, cash management techniques thrived. Banks started marketing a broad array of operating services to help firms maximize the value of cash assets. To track the latest trends in this young but fast-changing business, the American Banker conducted its second annual cash management survey of the Top 100 banks. Here are the results.

By Tom Ferris

THE BANKERS WHO sell cash management services to American corporations have spoken:

- Treasury workstations are a flop.
- Charges for deposit float are on the horizon.
- Fees for hourly account overdrafts may be coming.
- The need to provide companies with broad-based financial data is uncertain.

Those are some of the main findings of the *American Banker's* second annual survey on cash management. This year's poll was expanded beyond profitability issues to include questions on trends in the profession. Along with revealing their marketing strategies and most profitable services, the nation's 100 largest banks were asked to comment on possible changes in the years ahead.

AN **American Banker** SURVEY

One finding is that corporate treasurers may be facing additional charges not that far down the road.

About three out of five banks said that in the next few years they expect to see charges being imposed on companies for deposit float, which occurs between the time when a check is deposited and cleared. Items in the process of collection are booked as a nonearning asset and drag down a key bank profitability ratio, causing institutions to consider imposing a fee for deposit float.

The respondents were less sure whether banks will start charging corporate customers for account overdrafts that occur during the business day. More than one-third thought that such charges are likely within two years, in the wake of the recently enacted Federal Reserve Board policy that limits intraday bank overdrafts. But just as many disagreed. And a large segment — 27% — said they were not sure.

Two out of five institutions felt that in the next few years, leading cash management banks will have to provide customers with a broad range of financial information not directly related to underlying transactions or accounts — such as business news and market rates. But 51% disagreed. The remaining 9% were unsure. One-quarter of the banks said they already supply some broad-based data.

The biggest loser in the survey was treasury workstations — the automated treasury management systems that banks have been selling to corporations for the last few years. More than two-thirds of the 100 largest banks agreed that the product has been a "flop." The workstation did retain some support among the Top 25 banks, half of which disagreed it was a failure. Of the banks offering the product, 86% said they did not show a profit on it last year, and the systems have been downgraded as a marketing priority, according to the survey.

Seventy-three of the nation's 100 largest banks with cash management departments responded to the *American Banker* survey on cash management, which was mailed in July. Among the participants were 20 of the largest 25 institutions, based on deposits, and 7 of the Top 10.

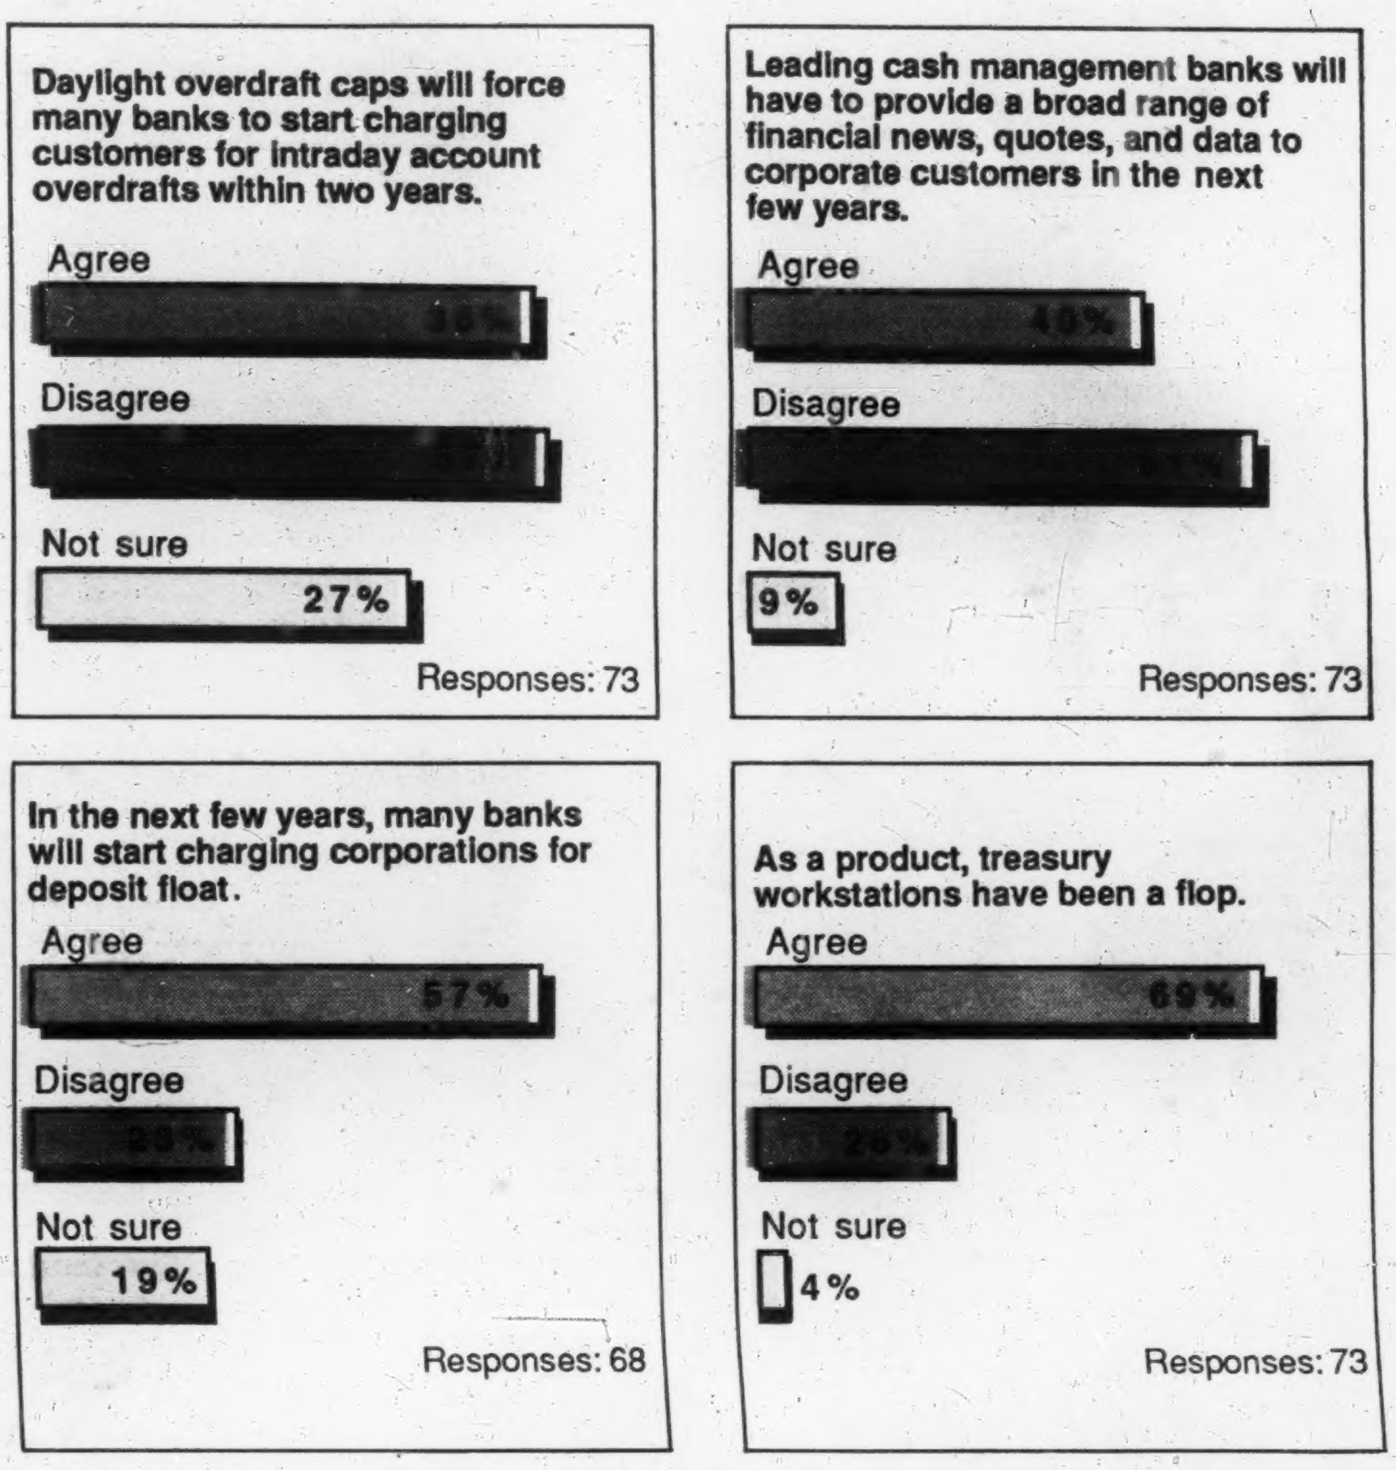
The survey's questions on profitability found that:

- Controlled disbursement was the most profitable cash management service at almost one-quarter of the Top 100 banks, while wire transfers tended to have the largest profit margin.
- Lockbox services top the marketing agendas at one out of three banks.
- Sixty-six percent of banks have their accounting systems track the profitability of individual cash management services, up from 58% last year.

(See related stories. The tabular results of the survey, broken down by bank size and by region, appear on page 16.)

Treasury Workstations

The hottest item in cash management a couple of years ago, treasury workstations, are fizzling, from all indications. Last year, 30% of the Top 100 banks said that workstations were at the top of their list of marketing priorities; this year, only 4% said so. Six of the 19 largest banks responding to the survey said they do not sell workstations, and of the 13 that do, 10 did not make a profit on the product in 1985.



Daylight overdraft caps will force many banks to start charging customers for intraday account overdrafts within two years.

Leading cash management banks will have to provide a broad range of financial news, quotes, and data to corporate customers in the next few years.

In the next few years, many banks will start charging corporations for deposit float.

As a product, treasury workstations have been a flop.

Some findings of American Banker's cash management survey.

The strongest signal of discontent with the automated management systems came in reaction to the statement, "As a product, treasury workstations have been a flop" — 53% of the respondents agreed with that assessment, and another 16% agreed "strongly." Twenty-two percent disagreed, 4% disagreed "strongly," and the remaining 4% was "not sure."

There was more support for the product among the Top 25 banks, with half of them disagreeing it was a failure. Banks in the West also tended to defend the product more than their peers in other regions.

The survey found a wide divergence in strategy towards the workstations, which operate via microcomputers and automatically dial a corporation's banks to collect balance and transaction data for analysis.

Twenty percent said they offer the product aggressively on a stand-alone basis, 27% said they offer it defensively on a stand-alone basis, 21% said they offer it only in conjunction with other products, 22% said they don't offer it but will support the use of workstations sold by other banks or vendors, and the remaining 10% said they had no strategy.

Of those that said they offer treasury workstations aggressively, only 29% agreed they have been a flop. But among those that offer the product defensively, 79% thought it was a failure.

Deposit Float

Over the last several years, the return-on-assets ratio has become a key measurement of profitability for analysts studying bank financial statements. That has prompted institutions to scrutinize the nonearning assets on their balance sheets. One category is "items in the process of collection" — that is, deposited checks of customers that have not cleared.

Even though payment has not yet been received from the checkwriters' banks, the items in collection are counted as part of the institution's gross demand deposits, meaning that reserves have to be set aside and federal deposit insurance fees must be paid. In addition, the return-on-asset ratio is lowered.

Cash management banks that clear checks for corporate customers can incur large amounts of deposit float. Traditionally, they have not charged direct fees for such float. Some regard it as a cost of being in the business, while others find indirect ways of recovering costs, such as delaying availability after checks clear.

But earlier this year, Morgan Guaranty Trust Co. reportedly starting charging a fee of 25 basis points to customers that create a daily average of $10 million or more in deposit float. (The policy is said to affect relatively few customers.) Other banks might pick up on the idea, according to the survey.

Fifty-one percent of the respondents agreed, and another 6% agreed "strongly," that "in the next few years, many banks will start charging corporations for deposit float." Only 23% disagreed. The remaining 19% was "not sure."

Banks ranked in size between 26 and 100 were a little more likely than their larger counterparts (60% versus 50%) to agree with the statement.

Overdraft Charges

An overwhelming 93% of banks agreed that the imposition of limits on

Continued on Next Page

OTHER SURVEY RESULTS

Continued from Previous Page

intraday bank overdrafts has been a "nonevent" for corporate customers. The overdraft caps, which took effect in March, limit the amount a bank can go into the red during the day while transferring funds.

There had been fears that the limits might slow the processing of wire transfers and delay transactions, but there has been little, if any, impact so far on corporations, judging by the survey results.

The Federal Reserve Board set relatively high overdraft limits initially, so that disruption of the wire-transfer market would be minimized. After gaining working experience, the Fed plans to reduce the limits further, perhaps in phases.

This has raised the possibility that banks, facing stricter limits on intraday overdrafts in their reserve accounts at the Fed, might start charging corporations for deficits in their accounts, even though the overdrafts might last for only a couple of hours or less. Big customers now often overdraw accounts during the day, knowing that anticipated incoming funds will cover the overdrafts in short order.

Asked if such charges might come about within two years, 36% of Top 100 banks thought they might, with 37% disagreeing. Reflecting the uncertainty in the marketplace, more than one-quarter of the banks replied they were "not sure."

A higher proportion of the Top 25 banks thought such charges were likely — 50% — and banks in the Northeast and West were also more liable to agree.

Financial Data

That technology will push large banks into the information business has almost become an axiom of the industry. Is it true? Not necessarily in the short run, according to the survey.

One-quarter of the respondents said they now provide customers with at least some information other than account and transaction data. This information, which might include foreign exchange rates, other market rates, or business news headlines, is delivered over a computer terminal. The percentage moves up to about 40% for banks in the Top 25, the Northeast, and the West.

But 51% disagreed that "leading cash management banks will have to provide a broad range of financial news, quotes, and data to corporate customers in the next few years." Forty percent agreed, and the remaining 9% were unsure. The findings were roughly the same for Top 25 banks and institutions ranked from 26 to 100 in size. ■

Zero-balance account	6	3	15	0
Other	7	7	17	0
Responses	43	41	17	26

By Tom Ferris

PROFITABILITY HAS become *the* buzzword at cash management departments. Products once offered as loss leaders to bring in loan business are increasingly being required to bring in revenue. The result is greater attention to pricing, costs, and accounting.

This trend, borne out by last summer's *American Banker* survey on cash management, was underscored again this year. Asked what would be the single most important issue or problem in the field over the next 12 months, bankers repeatedly cited profitability.

The responses sometimes took on a passionate tone. One officer at an East Coast bank said the key issue is "product-line profitability and the importance for well-managed banks to diligently identify their real costs for performing services and have the guts to price their products to make a handsome profit."

He continued: "This is a real problem, because banks have traditionally been afraid to charge properly for work done. In many instances, some bankers would rather not know what it really costs to produce the service, because they would rather not make waves. That's just the kind of logic that wins the battle but loses the war — idiotic."

The move toward stand-alone profitability of products has been prompted to a large degree by changes in the lending market. Fierce competition from foreign banks and from commercial paper issued by corporations have slashed the profit margins of loans and forced U.S. banks to take a new look at noninterest sources of income. Many institutions have turned to cash management services as one potentially lucrative area.

Evidence that banks are getting a better handle on costs and revenues comes from the survey finding that 66% of the Top 100 banks have accounting systems that track the profitability of individual cash management services, up from 58% last year. Among the 25 largest banks, 95% follow the profitability of individual services. For banks ranked from 26 to 100 in size, 55% track specific products, up from 47% last year.

The survey found virtually no change from a year ago in the formal accounting strategies of banks. A little more than half have set up their cash management departments as cost centers, which focus on tracing and accumulating expenses, but not direct revenues.

The others, totaling 46%, audit both revenues and costs to various degrees. This group consists of two segments — 17% said they were set up as profit centers, while the other 29% are "shadow" profit centers. For profit centers, direct profitability is a key goal and is an important consideration in operating decisions. Shadow profit centers are a hybrid category in which revenues and expenses are monitored, but only on a pro-forma basis for illustrative purposes. Unlike profit centers, these departments do not have control over all operating costs, such as overhead expenses.

Most Profitable Services

Once again, the same three services headed the list as most profitable at the 100 largest banks. Controlled disbursement generated the highest net profit at 23% of the banks, wire transfers at 21%, and account reconciliation at 20%.

In last year's survey, which measured profitability for 1984, wire transfers were cited most often as the top profit-maker (27%), followed by controlled disbursement (26%), and account reconciliation (19%).

Among the Top 25 banks, account reconciliation was most profitable. But at the next 75 institutions, one out of three cited controlled disbursement. And in the Southeast, controlled disbursement was most profitable at seven out of 12 banks. (Controlled disbursement provides a special checking account that enables a corporation to learn early in the day how many of its checks will clear, enabling accounts to funded exactly and excess funds to be invested.)

Almost one out of four banks said that wire transfers had the highest gross profit margin among cash management products, while one out of five cited controlled disbursement. Last year, 29% cited controlled disbursement and 18% said wire transfers.

The survey asked about the profitability of four services that fared poorly last year. Some 17% of the respondents said they failed to make a profit on wholesale lockboxes, and about half lost money on automated clearing house applications. Of those offering consulting, almost three out of four did not make a profit for the service, while treasury workstations did not generate a profit for 86%.

Sixty percent of the respondents do not offer consulting services, and about one-quarter said they do not sell workstations. ■

Survey: Hutton Case Not Overblown

But episode didn't prompt many to alter customer pacts.

America's bankers evidently took the E.F. Hutton check overdraft case seriously.

Only 19% of the 100 largest banks agreed that the scandal was "overblown" and that Hutton's cash management practices "were not as flagrant as the Justice Department claimed."

By contrast, 43% disagreed with that assessment and another 23% "disagreed strongly."

The remaining 15% indicated they were not sure whether they agreed or disagreed with the statement.

The brokerage house's guilty plea in May 1985 to overly aggressive cash movement activities touched off a whirlwind of publicity about the cash management profession. After months of headlines and Congressional hearings, many bankers and cash managers privately complained that the crime was being exaggerated.

But according to the *American Banker* survey, the banking industry by and large disagrees that the scandal was overblown. The feeling was especially strong at Top 25 banks, where 35% disagreed strongly and another 30% disagreed. At banks ranking in size from 26 to 100, 19% disagreed strongly and 47% disagreed. Only 1 of 73 respondents "agreed strongly" with the statement.

Even though the industry viewed Hutton's abuses as serious, only one-quarter of the respondents said the incident prompted them to review, change, or implement formal operating agreements or contracts with corporate customers. ■

Planning Ahead

Lockboxes are top marketing priority at 32% of banks; workstations fizzle.

Lockbox services once again will figure prominently in the marketing budgets of many cash management departments over the next year. But treasury workstations will take a back seat.

Last summer, almost one-third of the nation's 100 largest banks cited treasury workstations as the product they would spend the most money on marketing in the following 12 months. But in this year's *American Banker* survey, only 4% singled out workstations.

The money taken away from the automated treasury management systems will be directed instead toward products that, according to the survey, are far more profitable. Almost one-quarter of the respondents — twice as many as last year — said that the largest share of their marketing budgets would go toward balance reporting services, while 12% have targeted controlled disbursement as their top item, up from 2% in last year's survey.

Remittance processing, or lockbox, services again were cited as the top budget item by the most banks — 32% — virtually the same as last year.

There were some variations by region. Lockboxes were the top budget item in the Southeast (42%) and West (34%), while balance reporting was mentioned most often in the Northeast (31%), and automated clearing house applications (35%) in the Midwest.

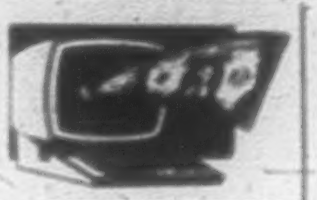
By the resounding margin of 6 to 1, the Top 100 banks disagreed that sharply lower interest rates have hurt their cash management business significantly.

Asked to react to this statement — "The dramatic decrease in interest rates has made it much harder to sell cash management services" — 84% objected.

The survey also found that sales and marketing budgets continue to swell. This trend, at a time when banks are trying to curb noninterest expenses, indicates that cash management business is being given a high priority.

One-quarter of the banks increased marketing expenditures during the last year by more than 20%, while an additional one-third boosted spending by at least 10%. Over all, 84% increased their budgets. Banks in the Top 25 and the Northeast tended to have smaller increases than other institutions.

Only 11% of the banks indicated that their cash management sales forces were part of their lending departments, while 79% said their salesmen were part of separate cash management areas. Ten percent gave other answers. ■



Which cash management service will your bank spend the most money on marketing in the next twelve months?
(In percent)

1987 Agenda: Profits, Risk

What's on the minds of bankers who sell cash management services?

The *American Banker* survey asked the nation's largest banks what would be the most important issues or problems in cash management over the next 12 months, and they provided a surprisingly long laundry list of topics.

Here is a sample of the responses:

Profitability
- pricing products profitably
- the implications of product profitability for future product development and investment
- declining profit margins
- the cost of maintaining sales/product support effort

Risk
- wire-transfer risk
- the second-phase reduction of daylight overdraft caps
- properly assessing the risks in cash management services

Technology
- justifying real-time systems
- keeping pace with technological changes in order to retain and grow market share
- the development or purchase of in-house information reporting systems by banks that have used vendors
- microcomputer access to banks

Interest Rates
- the effect of low interest rates
- fighting the idea that lower rates lessen the need for cash management

Automated Clearing House
- whether the Federal Reserve will impose transaction limits to reduce risk
- the need for a continued strong emphasis to convert from paper-based system to electronics

Deregulation
- banks deciding to leave a market due to low demand, too many suppliers

Mergers
- combining systems and products of merged institutions
- servicing customers of newly merged banks effectively. ■

Cash Management

Seventy-three of the nation's 100 largest banks with cash management departments responded to the *American Banker* survey, which was mailed in July. The tabular results are printed below.

Among the participants were 20 of the largest 25 institutions, based on deposits, and seven of the Top 10. The respondents were instructed to include the value of bank-retained float and compensating balances in determining the profitability of services.

In some cases where more than one answer was given to a question, the response was weighted proportionately so that the reply of each bank counted equally. Percentages do not always add up to 100% because of rounding.

The responses have been listed in several categories: overall (all respondents), Top 25 banks, banks ranked 26 to 100, and regionally — Northeast (NE), Southeast (SE), Midwest (MW), and West (W).

Here is how the states are grouped:

Northeast: Connecticut, Massachusetts, Maine, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Southeast: Alabama, Arkansas, Delaware, Florida, Georgia, Louisiana, Maryland, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, West Virginia, and Washington D.C.

Midwest: Iowa, Illinois, Indiana, Kansas, Kentucky, Michigan, Minnesota, Missouri, North Dakota, Nebraska, Ohio, Oklahoma, South Dakota, and Wisconsin.

West: Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, New Mexico, Nevada, Oregon, Texas, Utah, Washington, and Wyoming.

1. For accounting and reporting purposes, how is your cash management department regarded within the bank?

	Overall (%)	Top 25 (%)	26-100 (%)	NE (%)	SE (%)	MW (%)	W (%)
Cost center	54	35	61	35	67	70	52
Profit center	17	30	12	25	9	10	19
"Shadow" profit center	29	35	27	40	24	20	29
Sample	**72**	**20**	**52**	**20**	**21**	**10**	**21**

2. Over the past year, have expenditures for cash management sales and marketing at your bank:

	Overall (%)	Top 25 (%)	26-100 (%)	NE (%)	SE (%)	MW (%)	W (%)
Increased by more than 20%	25	15	29	10	38	30	24
Increased from 10% to 20%	37	50	32	45	52	10	29
Increased by up to 9.9%	22	15	25	30	10	40	19
Decreased by up to 10%	12	15	12	10	0	10	29
Decreased by more than 10%	3	5	2	5	0	10	0
Sample	**72**	**20**	**52**	**20**	**21**	**10**	**21**

3. Does your bank's accounting system track the profitability of individual cash management services?

	Overall (%)	Top 25 (%)	26-100 (%)	NE (%)	SE (%)	MW (%)	W (%)
Yes	66	95	55	65	64	60	71

Consumers Find Credit Card Interest Too High And Say They Would Switch to Cheaper Banks

But Some Bankers Say Customers Aren't Shopping

By MICHAEL WEINSTEIN

First of two articles

NEW YORK — A majority of consumers think credit card interest rates are too high, and many of them say they would switch credit cards for a "much lower" rate, according to a recent survey commissioned by the *American Banker*.

The survey also found a higher sensitivity to interest rates among the most profitable credit card customers — those who carry outstanding balances from month to month.

How Consumer America Views the Changing Financial Services Industry

The newspaper's third annual survey gauged consumers' attitudes on a range of issues in the financial services industry. The nationwide telephone survey polled 1,028 adults between May 30 and June 18. It was conducted by Reichman Research Inc., a New York City-based opinion research firm.

This is the first of two articles on how consumers view credit cards. Additional findings from the *American Banker* survey will be published later this year.

For years, the prevailing wisdom in the industry has been that consumers are basically insensitive to credit card interest rates. Now, it appears that bankers are divided over that issue.

"Our experience to date has been that the credit card user is not that sensitive to rates," said Henry J. Silver, a vice president at Wells Fargo Bank in San Francisco.

"We believe that consumers do pay attention to rates and will change," countered Carl M. Harris, first vice president at People's Bank in Bridgeport, Conn.

AN **American Banker** SPECIAL REPORT

As competition in the credit card business intensifies, some analysts are predicting price-cutting in the form of lower interest rates. But for many banks, the question is how severely rates must be cut to attract new customers.

A few months ago, People's Bank and other Connecticut institutions slashed their interest rates to 12% or less, while competing card issuers have maintained their rates of at least 18%. Connecticut bankers report that the lower rates are wooing away customers from other banks.

But at many banks, a rate cut of such magnitude would drastically lower income and turn the credit card operation into a money loser, bankers say.

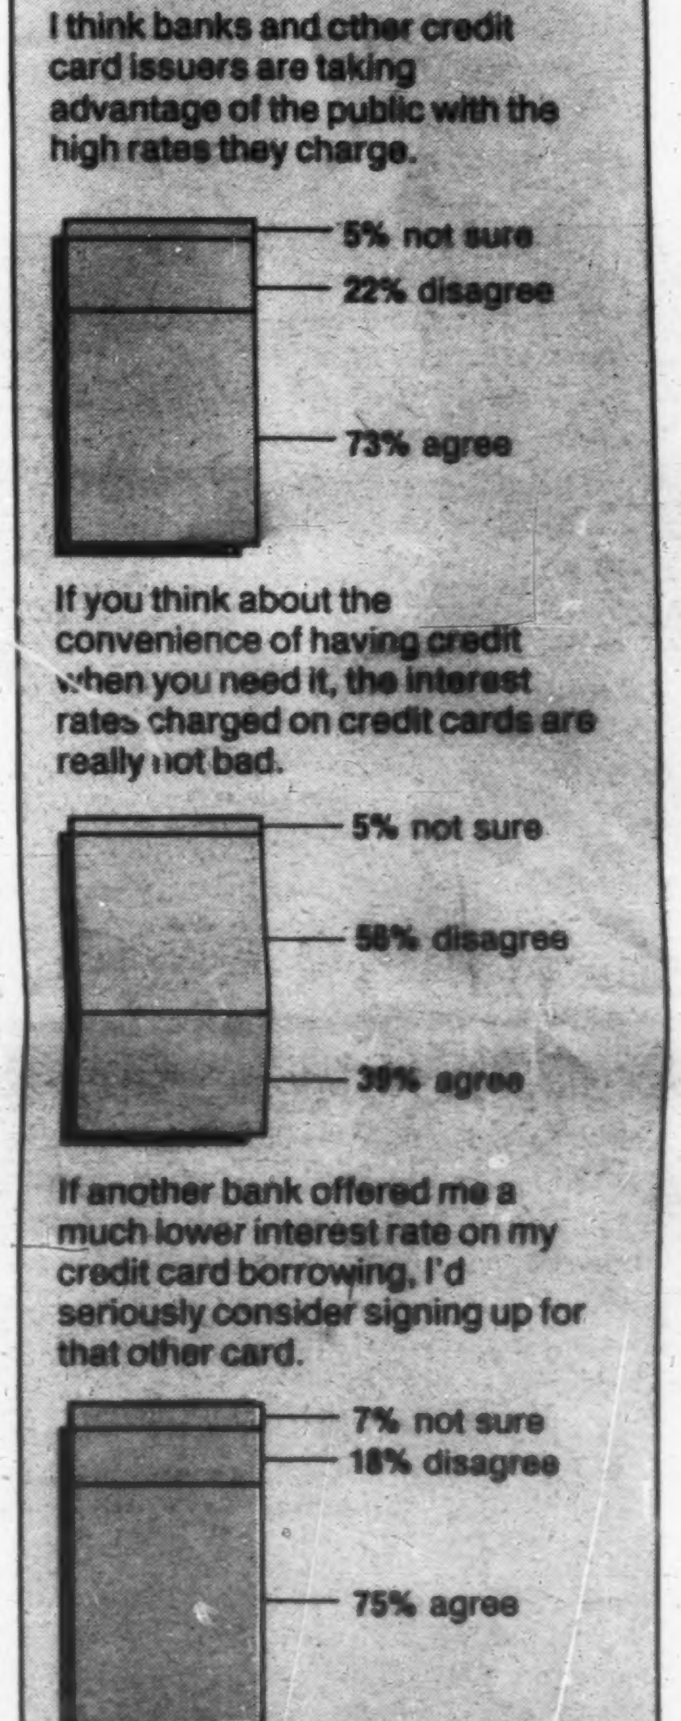
"A 'much lower' rate probably equates to five percentage points lower," said Mr. Silver, who believes such a reduction would endanger the profitability of Wells Fargo's card operation.

Older Accounts, Lower Losses

Wells, however, has lowered its credit card interest rate from 20% to 17% for customers who have held the bank's cards for at least five years. Loan losses are lower on older accounts, so the bank can afford the cut, which also

Survey: Page 41 ➞

Consumer Attitudes Toward Credit Card Interest Rates



I think banks and other credit card issuers are taking advantage of the public with the high rates they charge.

If you think about the convenience of having credit when you need it, the interest rates charged on credit cards are really not bad.

If another bank offered me a much lower interest rate on my credit card borrowing, I'd seriously consider signing up for that other card.

IN THE NEWS

TSO Acquires Apex

HORSHAM, Pa. — TSO Financial Corp., parent of Colonial National Bank USA of Delaware, said it will buy Apex Financial Corp. for $7.5 million. Apex, founded in 1979, is a residential second mortgage lender in the Northeast and Midwest. TSO, with assets of almost $700 million, offers personal loans and credit cards to consumers through its Delaware bank.

Virginia Banks Merge

RICHMOND — United Virginia Bankshares Inc., with $8 billion in assets, will acquire People's Bank of Chesapeake in a deal valued at around $17.1 million. Shareholders of the $71 million-asset People's will receive five shares of UVB common for each of their shares.

Pa. Thrift Kills Dividend

PHILADELPHIA — Fidelity Federal Savings & Loan Association said it will discontinue payment of its regular quarterly cash payment of five cents per share as a result of the Federal Home Loan Bank Board's new capital adequacy regulations. The $184 million-asset thrift said it will retain earnings for the time being to support future growth. It also declared a six-for-five stock split on Friday.

U.S.-Japan Rate Talks

TOKYO — Treasury Secretary James Baker and Japanese Finance Minister Kiichi Miyazawa are scheduled to meet in Washington early this week in advance of the annual International Monetary Fund meeting Sept. 30-Oct. 3. The two are expected to discuss U.S. calls for a coordinated cut in interest rates to spur economic growth. French Prime Minister Jacques Chirac and West German Chancellor Helmut Kohl are to discuss the same issue in a separate meeting this week. Both West Germany and Japan have resisted U.S. calls for a rate cut.

S&P Upbeat on Banks

NEW YORK — Despite pockets of weakness, notably in the Southwest, the financial sector remains generally stable and a negative rating trend will be halted, Standard & Poor's said in its latest corporate credit quality report. Banks in the Northeast, Southeast, and Midwest, excluding those in the Farm Belt, are performing well, it said, while the Southwest will remain under pressure.

Bank Failures Hit 99

WASHINGTON — The Federal Deposit Insurance Corp. has arranged for Community National Bank of Okarche, Okla., to assume $22.7 million in deposit liabilities of the failed Fairview State Bank of Fairview, Okla. The FDIC continued looking to find a buyer for a second bank that failed last week, the $68 million-deposit Western Bank in Midland, Tex. By midday Friday, 99 FDIC-insured banks had been closed this year; 48 of them are farm banks.

Big Players Win More of Bank Card Credit Market

Top 100 Banks, Led by Citicorp, Make 78% of All Insured Banks' Card Loans

By L. MICHAEL CACACE

NEW YORK — The top 100 commercial banks in credit card lending increased their share of the bank credit card market in 1985. More than 78% of all credit card loans made by insured commercial banks are on the top 100 banks' books, up from less than 73% at yearend 1984.

Citicorp, by far the biggest bank card player, also increased its share of the market.

The top bank in credit card lending is Citibank South Dakota NA, Sioux Falls. In addition, Citicorp has four other commercial bank subsidiaries that rank among the top 20 banks in the nation in credit card lending. Together, Citicorp's five bank subsidiaries account for 21.2% of the credit card loans held by the top 100 banks and 16.5% of the credit card loans outstanding at all insured commercial banks.

These are some of the findings of a new *American Banker* survey of the top commercial banks in credit card loans outstanding published today. The survey is based on the federal regulatory report of condition for Dec. 31, 1985, and the 1985 report of income for all insured commercial banks. The data were provided to *American Banker* by ADP Data Services Division, New York.

Tables of Top Credit Card Banks
Pages 34-35

Today's survey presentation consists of three tabular listings. The first table, on page 34, ranks the top 100 banks in credit card loans outstanding on Dec. 31, 1985. Also shown are credit card loans outstanding on Dec. 31, 1984, the percentage change in credit card lending, gross interest revenues from credit card lending for 1985 and 1984, and the ratio of credit card loans to total loans. The second table, on page 35, breaks down the top 100 banks by state.

Like Citicorp, many companies have credit card loans outstanding in more than one of their bank affiliates. Therefore, *American Banker* presents a third table, on page 35, based on the combined credit card loans outstanding at all the bank affiliates of banking companies.

This table lists all companies with more than $1 billion in credit card loans outstanding at their commercial bank affiliates that were ranked among the top 200 in country on Dec. 31, 1985. The 200th largest bank in credit card loans had $44.8 million in such loans on Dec. 31.

The credit card loan data were taken from Schedule RC-C, item 6a, of the report of condition and include all extensions of credit to individuals for household, family, and other personal expenditures arising from bank credit cards or special prearranged overdraft plans.

Gross interest income from credit card operations comes from the Report of Income, item 1.a.(1)(f)(1), and includes all interest, fees, and similar charges levied against or associated with domestically-booked credit card and related plan loans.

The top 100 banks had $61.4 billion in credit card loans outstanding on Dec. 31, 1985, up 37.6% from $44.6 billion on Dec. 31, 1984. In addition, the top 100 banks reported gross interest revenues from domestically booked credit card loans of $9.38 billion, up 41.3% from $6.64 billion in 1984.

According to data from the Federal Deposit Insurance Corp., credit card loans outstanding at all insured commercial banks totaled $78.42 billion on Dec. 31, 1985, a gain of 27.9% from $61.29 billion a year earlier.

Thus, the top 100 banks accounted for 78.2% of credit card loans made by all insured banks last year, compared with a ratio of 72.8% in 1984.

Citibank South Dakota had $8.05 billion in credit card and related loans outstanding on Dec. 31, 1985, making it the No. 1 bank in the nation in such loans. Its credit card loans rose 26.4% last year from $6.4 billion on Dec. 31, 1984. In addition, it was the largest bank in gross interest revenues from credit card operation with $1.52 billion in 1985, up 70.5% rise from $890.4 million in 1984.

Citibank South Dakota NA was established in 1981 to handle the bulk of Citicorp's credit card operations. At yearend it ranked as the nation's 37th largest bank in assets with $8.4 billion and the 135th largest in deposits with $2 billion.

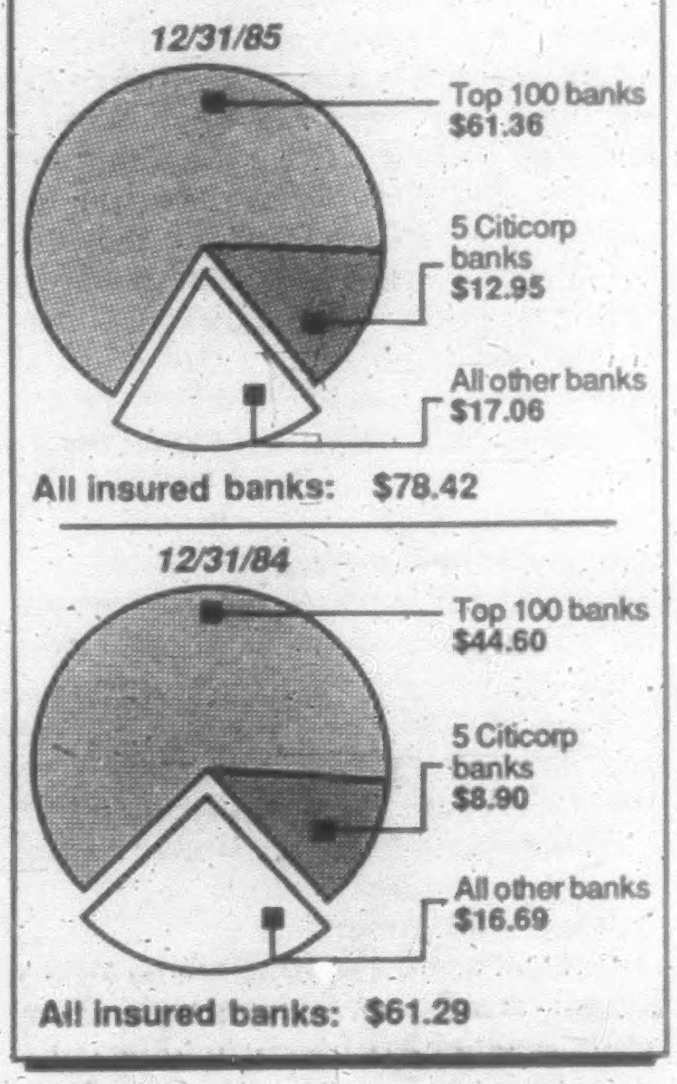
The four other Citicorp bank affiliates ranked among the top 20 are sixth-ranked Citibank (Nevada) NA, Las Vegas, with $1.6 billion in credit card loans on Dec. 31; eighth-ranked Citibank NA, New York, with $1.45 billion in credit card loans; 17th-ranked Citibank (Maryland) NA, Towson, with $959.6 million; and 18th-ranked Citibank (New York State) NA, Rochester, with $881.2 million.

The five Citicorp bank affiliates had combined credit card and related loans outstanding of $12.95 billion on Dec. 31, 1985, up 48.7% from $8.71 billion a year earlier. Their combined gross interest revenue from domestic credit card operations totaled $2.17 billion in 1985, up 74.5% from $1.24 billion in 1984.

Thus, the Citicorp affiliates accounted for 21.1% of credit card loans outstanding at the top 100 banks on Dec. 31, 1985, and 16.5% of credit card loans outstanding at all insured commercial banks. In 1984, the five Citicorp banks accounted for 19.5% of the top 100 bank loan total and 14.2% of the all insured commercial bank loan total.

The Bank Credit Card Lending Market:
Citicorp and Top 100 Banks' Share

Dec. 31, 1985 vs Dec. 31, 1984
(In billions of dollars)



Other Survey Findings

- Based on the combined credit card loans outstanding at all commercial bank subsidiaries, the top five banking companies are: Citicorp with $12.95 billion in credit card loans outstanding on Dec. 31, 1985; BankAmerica Corp. with $6 billion; Chase Manhattan Corp. with $3.6 billion; First Chicago Corp. with $3.4 billion; and Wells Fargo & Co. with $3.1 billion.
- Among the top 100 banks, the state with the largest representation is Delaware with 13 banks. Most of the Delaware banks are special-purpose banks established under the state's Financial Center Development Act of 1981 and Consumer Credit Bank Act of 1983. A special-purpose bank has a commercial bank charter but makes few or no commercial loans. In most cases they are used by bank holding companies to handle particular functions, such as credit card operations, and to take advantage of higher interest rate ceilings and tax breaks.
- Excluding special-purpose banks, among the top 10 banks, the bank with the highest ratio of credit card loans to total loans on Dec. 31, 1985, was First National Bank, Chicago, with a ratio of 15.9%. Among the top 25 banks, Bank of Virginia, Richmond, had the highest ratio, 26.7%. And among the top 100 banks, 86th-ranked Purdue National Bank, Lafayette, Ind., had the highest ratio, 57.5%. ■

Two Arrested as FBI Continues Probe of California Thrift

Special to the American Banker

SAN FRANCISCO — The financially troubled Centennial Savings and Loan Association, Santa Rosa, Calif., is under federal investigation for allegedly laundering drug money, receiving loan kickbacks, and dabbling in other illegal schemes.

Disclosure of the multifaceted investigation followed the arrest last Wednesday of Centennial Savings and Loan's main branch manager, Raleigh Riley Yasinitsky, and its former executive vice president, Beverly Rose Haines.

Mr. Yasinitsky, 29, and Ms. Haines, 53, have been jailed without bail on charges that they embezzled $1.8 million from Centennial Savings between January 1985 and last month. The two are scheduled for a bail hearing here today in federal court.

The embezzlement case is one of the largest in the San Francisco Bay Area in the past five years, according to the prosecutor, Assistant U.S. Attorney Peter Robinson. The federal probe, however, is only one part of a broad investigation that was initiated after the federal takeover of Centennial Savings in August 1985, Mr. Robinson said.

Centennial Savings, which was founded in 1976 as a small thrift with $18 million in assets, had a rapid rise and a devastating decline. Its initial assets dramatically rose to $408 million, then plummeted before the Federal Home Loan Bank Board declared Centennial insolvent amid charges of mismanagement and fraud.

Directors and top executives, including Ms. Haines, were ousted during the takeover period. Mr. Yasinitsky was kept on as a branch manager.

Since then, Centennial Savings has

Quote

Many lending institution executives, directors, and loan officers are either essentially ignorant of or ill-informed about the proper role of real estate appraisal in loan underwriting. Worse still, many such officials maintain that it is not difficult to find an accommodating appraiser who can be counted on to come up with whatever results are desired.

From the report of a House subcommittee. [Page 3]

Random Thoughts

By SANFORD ROSE

Alden Toevs of Morgan Stanley has just released an important analysis of the relationship between the term structure of interest rates and asset-liability management. Chock full of insight, the study questions the wisdom of certain popular asset-liability practices.

For example, many bond portfolio managers assign to each asset cash flow a liability flow that matures from 30 to 90 days earlier. Reason: The banks believe that they are taking advantage of the liquidity premium in longer rates. Thus even though they are assuming some interest-rate or expectational risk, they feel that the premiums earned from short-funding longer-maturity asset cash flows more than compensate for that risk.

But are they right? Mr. Toevs presents evidence that while the liquidity premium is found in the market for treasuries and treasury-related paper, it may not exist at all in many nontreasury markets. What's more, the premium seems to reach a maximum value between nine months and one year.

As Bank Loan Market Comes of Age, Sellers Pursue Nonbank Purchasers

By LISABETH WEINER

Commercial Lending

CHICAGO — The three-year-old asset sales market is maturing. And as it settles into adulthood, the sellers of loans, usually money center banks and very large regionals, are finding that not only must they find new loans to push, they must find new buyers for their loans.

While foreign banks and domestic regional banks until now have been by far the largest buyers of these high quality loans, generally made to Fortune 1,000 companies, bankers are seeking to bring new buyers on-line — namely, nonbanks. The hoped-for new nonbank buyers include thrift institutions, pension fund managers, money managers, insurance companies, and even other corporations.

For investors, purchases of high quality loans are like investments in other short-term credit such as commercial paper. In fact, said Christopher Snyder, president of Loan Pricing Corp., New York, "anybody who would be interested in buying commercial paper would be interested in buying bank loans."

Right now, nonbank involvement in this part of the market is minute. But it is a market segment that some banks — the most active participants in the market — would like to see grow.

Corporate purchasers of loan participations are interested in the short term of the market and generally are looking for new investment strategies, said Mary Ellen O'Connor, vice president of Bankers Trust Co. in New York. Loan participations are attractive to them because they carry a slightly higher yield than other investments, such as overnight federal funds, to compensate for the fact that the instrument is less liquid, she added.

Banks such as Bankers Trust that have been leaders in the asset sale mar-

Superregionals Fuel Growth Of Top 100

Brisk Acquisition Activity Accounts for Asset Gain

By KENNETH J. HICKS

NEW YORK — Superregional firms were the main source of the sizable growth in assets, deposits, and capital among the nation's top 100 bank holding companies in the first half of this year.

A superregional banking firm is defined as a company that has merged across state lines with another bank, but which is not based in a major "money center" city. There are 34 superregional firms among the top 100: seven in the Northeast; three in the Mid-Atlantic states; 11 in the Southeast; 10 in the Midwest; and three in the West.

These are among the findings of the *American Banker* survey of the 100 largest bank holding companies at midyear. Tables on pages 21-23 in today's edition include the 100 holding companies ranked by assets; a geographical breakdown of the top 100 by region; a

The American Banker groups bank holding companies into five geographical regions. The five regions are: the Northeast, the Mid-Atlantic, the Southeast, the Midwest, and West. The Northeast Region is comprised of the following states: Connecticut, Massachusetts, Maine, New Hampshire, New York, Puerto Rico, Rhode Island, and Vermont. The Mid-Atlantic Region is comprised of: Delaware, New Jersey, and Pennsylvania. The Southeast Region is comprised of: Alabama, Arkansas, the District of Columbia, Florida, Georgia, Louisiana, Maryland, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia.

The Midwest Region is comprised of: Iowa, Illinois, Indiana, Kansas, Kentucky, Michigan, Minnesota, Missouri, North Dakota, Nebraska, Ohio, Oklahoma, South Dakota, and Wisconsin.

The Western Region is comprised of: Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, New Mexico, Nevada, Oregon, Texas, Utah, Washington, Wyoming.

Because of their impact on the rankings of the top 100 banking firms, New York City banking firms are shown separately from all other banks in the Northeast Region, and California and Texas banking firms are listed separately from all other banking firms in the Western Region.

Superregionals Biggest Gainers Among Top 100 Banking Firms

➸ Continued from Page 1

geographical breakdown of the 34 super regional banking firms; summary statistics for the top 100 firms compared with a year ago; the 10 highest and lowest primary capital-to-assets ratios; and the top 25 banking firms in net income for the first half of 1986.

The superregionals' impact on the aggregate totals for the top 100 banking firms was significant. For example, for the 12-month period ending June 30, the assets of the 34 superregional firms — spurred by their acquisition activity — jumped 26%, to $512 billion from $406 billion. The 100 largest banking companies, as a whole, posted asset growth of 11.6%. But, excluding the superregionals, assets rose only 6% at the top banking firms.

The superior growth of the superregionals boosted their share of total assets of the top 100 firms. As of June 30, the superregionals accounted for 28% of total assets of the top 100 firms, compared with 25% at midyear 1985

Among the superregionals, the banking firms in the Mid-Atlantic and West showed weaker growth than the rest of the superregionals. While net income and primary capital was up 22.2% and 26.1%, respectively, for all superregionals, Mid-Atlantic superregionals' net income declined 13.5% and primary capital was up 14.5%. Western superregionals' net income was up 13.7% and primary capital increased 14.1%.

The lower figures for the Mid-Atlantic can be attributed to the continued stresses of "merger mania," as one bank analyst put it. "That's been a very active area for mergers and acquisitions in recent years and a lot of banks are still taking earnings hits because they're consolidating."

He went on to explain that three superregionals in particular — PNC Financial Corp., Pittsburgh; CoreStates Financial Corp., Philadelphia; and Midlantic Banks Inc., Edison, N.J. — have completed mergers and are still in the process of consolidating.

"This would slow them from building primary capital, might cut into their earnings, and they might be cutting asset growth in a consolidation bid after the mergers," he said.

The top 100 firms improved their primary capital-to-assets ratio 40 basis points during the year ended June 30, to 7.21% from 6.81%. During the same period, their total capital-to-assets ratio rose 132 basis points, to 9.26% from 7.94%. The more substantial rise in the total capital-to-assets ratio was attributable to the sizable growth in secondary capital, which jumped more than 100%, to $37 billion.

The main component of secondary capital is long-term debt. The growth in long-term debt has been helped by the low interest rate environment, which makes it considerably cheaper for firms to raise cash in the markets. In fact, debt issues by financial services firms for the first half of 1986 had already exceeded the total issued in all of 1985, a record year in itself for underwritings.

Other Survey Findings

- Deposits of the top 100 firms were up 10.4% during the year, to $1.2 trillion.
- As mentioned above, the average primary capital-to-assets ratio for the top 100 firms was 7.21%, up from 6.81%. Thirty-seven of the firms were below the average. State Street Boston Corp. had the lowest ratio — 5.70%. AmeriTrust Co., Cleveland, had the highest at 10.38%.
- Last year, none of the top 25 firms in assets was among the top 10 in the ratio of primary capital to assets. But this year two of the giants, J.P. Morgan & Co., New York, and Norwest Corp., Minneapolis, pushed into the 10 best. Norwest ranked ninth with a 8.35% ratio and Morgan was 10th with a 8.33% ratio.

Similarly, only two of the top 25 were among the 10 smallest in primary capital-to-assets ratios last year. But this year there were five: BankAmerica Corp., San Francisco, had the second lowest ratio among the top 100, 6.26%; Bank of Boston Corp. was the seventh lowest at 6.46%; First Interstate Bancorp, Los Angeles, eighth, with 6.52%; and Bankers Trust New York Corp. and Irving Bank Corp., New York, both at 6.55%, were ninth.

- The net income for the top 100 firms totaled $4.9 billion for the first

"PERHAPS WE SHOULD HAVE MADE TIME FOR A DIRECTORS' RETREAT"

Whether your bank is sailing into troubled waters or sees new opportunities ahead, management needs its directors on board. Monthly board meetings are not the time to plan new strategies. Time limitations barely allow you to address current business.

Borod & Huggins has the solution! A Directors' Retreat.

Bringing management and directors together for a 1 or 2 day "Directors' Retreat" provides the concentrated time and needed environment to plan successfully new strategies, deal with current issues and make decisions.

Borod & Huggins brings professional expertise to crucial banking matters, including mergers and acquisitions, new products and services, utilizing your bank holding company most effectively, directors' and officers' liability concerns, venture capital opportunities and anti-takeover planning.

Each retreat is tailored to your bank's specific requirements. You select the site and Borod & Huggins will see to the rest.

We are here to help you plan ahead–before setting sail.

Please call Sue Duncan at 901-524-0202 or write Borod & Huggins Management Services, Inc. for our information packet: 80 Monroe Ave., Memphis, TN 38103-2189.

Dear Reader, How Are We Doing?

The American Banker wants very much to make sure its coverage of the financial services industry meets your information needs. So would you spend a moment to give us some feedback on the statistical tables that appear in today's survey of the **Top 100 Bank Holding Companies**? Over the past year we have incorporated many of your suggestions to provide more meaningful information. Please return this questionnaire to L. Michael Cacace, Statistical Chief, American Banker, One State Street Plaza, New York, N.Y. 10004. Telephone 212-943-4836.

1. How would you **change** the tabulation to make it more useful? What would you add?

______

______

2. What do you like **best** about this tabulation?

______

______

3. What do you like **least** about this tabulation?

Tracking, Relationship Pricing, and Execution Make a Difference

➡ Continued from Page 19

Calling, Citidollars, and the like are examples of the "earn discounts or prizes for doing a lot of business with us" scheme. I consider this a form of relationship pricing because the price or benefits are dependent upon the extent of the purchase relationship.

This is clearly a very popular concept and many organizations have adopted it. A complete review is beyond the scope of this discussion; however, I'd like to offer two cautionary thoughts: 1) Even if the prizes cost nothing (i.e., they come from excess stock, donations for promotional consideration, etc.) the cost of administering it can be very substantial, including special phone banks and operators, special point tracking and accounting systems, and special catalogue-style mailers, just to name a few; and 2) Once into a program like this, it is almost impossible to get out. Do you really want to commit your organization to this forever?

One other comment on pricing. At all costs try to avoid cutthroat pricing competition. Those customers that do not value the relationship are indeed too expensive to serve and sell and may not be worth trying to acquire or retain.

Execution Is Critical

Let's finish with a few comments on execution. Somehow, when first writing this, there wasn't even a section on execution because it is so typical for marketing people to just assume that the execution will be brilliant and work. That's simply not true.

Execution, in and of itself, is critical to success. Great strategies with poor execution don't work, although I have found that mediocre strategies with outstanding execution can, in fact, work.

So execution is key. Not enough time is spent on what I call "executional strategy."

A lot of time is spent on copy, for a very simple reason: the creative product is often highly discussed and diagnosed because it's fun. It's fun to look at story boards, to look at direct mail letters, and the like. But do you spend as much time on your executional strategy as you need to?

Executional strategy means having a set of principles that guide your execution (we don't just mean a graphic standards book). Our executional strategy at Schwab, for example, involves the following kinds of elements.

We are a direct response marketer. Therefore, every ad we run, whether or not we consider it to be a pure direct response ad or an ad with a lot of image value, always has an 800 number and always has a coupon if it's in print. Our media strategy is to be opportunistic in our buys. We are always a buyer at the right price, and we always track our results to see if something is successful for us. Our executional strategy is straightforward: to test small, cut our losses, and roll out our successes.

Our executional strategy is to always stay with the principles of good direct response marketing, which is strong customer benefits, simplicity, and clean layouts through all of our ads.

Finally, I would say that our executional strategy also dictates that no one has a corner on all the expertise in our company. The experts are not always right; anything can be challenged and debated before it's done. The most junior person has every right to question and challenge the approach on any activity.

Let's conclude by reviewing a couple of quick case study examples of reasonably well-executed programs for improving customer loyalty and retention.

Shearson, several years ago, developed what was called The Serious Investor Newsletter, which was a four-page newsletter that went into every Shearson statement. The brand character of this newsletter and the brand character of Shearson were one: they were the "respected advisors to the serious investor." The communication strategy was to educate customers regarding products, make this newsletter interesting to read to build loyal readership, never be hard-sell, and offer lead generation via booklet offers within a business reply card. The result of this for Shearson was 96% readership of this newsletter, receiving 10,000 to 20,000 new leads per month, which was far beyond any of the hard-sell statement stuffer programs that had preceded this newsletter.

Program Based on Mortgages

Several years ago, Citibank began a very aggressive cross-sell relationship program based upon mortgages. The brand character of Citibank, I believe, was that it was an innovative, aggressive bank ("the Citi never sleeps"). The communication strategy was: "We'll give you a better price if you do all your banking with Citibank; Citibank should become your only bank." And if you did so, they would give you the "preferred" customer rate. Second point to the communication strategy was: "We'll give you an answer within two weeks, whereas the competition takes four to six weeks." The cross-sell strategy was to use mortgages as a way to get existing customers to consolidate all their business and new customers to bring their entire relationship to Citibank.

The result was that 98% of the customers who got a new mortgage with Citibank accepted the preferred customer rate and promised to bring all of their business to Citibank. By the way, the bank built in a rather elaborate tracking system since many customers had CDs that would mature in three, six, nine months down the road, and the bank wanted to make sure that those CDs indeed came over to the bank.

Before those CDs matured, the bank would contact the customer and remind him or her of the obligation to bring those CDs over to Citibank. I don't know whether the obligation would be legally enforceable, but the bank tried to imply that people had a moral responsibility to adhere to the agreement. The bank did retain the right, at any time they felt appropriate, to increase the customer's mortgage rate by one percentage point to what was the regular rate. The bank almost never had to do so.

My last case study is a reporting system that I've seen in several different banking and brokerage environments. This reporting system is basically a customer movement report, or what we at Schwab call a "was-is" report.

In the brokerage business, we might look at the amount of commissions generated by a customer or a group of customers in 1985 versus the amount of commissions generated by that same account or group in 1986. And when you see movement from good, profitable customer relationships to less profitable relationships, you should take action. You need to have the details to list those customers who are downgrading the relationship to find out why. It provides an early means of spotting customer attrition. Conversely, it also affords you the opportunity to thank those customers who have deepened their relationship by doing more business with you and to ask them for referrals.

In closing, I would like to say that getting new customers is a very difficult thing to do. Every time you get a new customer you are normally taking that customer away from somebody else. It takes superior salesmanship and superior products. It's often more difficult and less profitable to get new customers than to retain your existing customers and get more business from them. ■

Top 100 . . .

➡ Continued from Page 30

six months of 1986, down 4.2% from $5.1 billion earned during the first half of 1985.

- The decline among the biggest in net income is directly attributable to the large losses suffered by three of the banking companies: BankAmerica, which lost $577 million; InterFirst Corp., Dallas, which lost $279 million; and First City Bancorporation of Texas, Houston, which was $217.3 million in the red.

When those figures are excluded, net income for the rest of the group was up 6.6%.

- For the top 25 firms in earnings, net income totaled $3.8 billion for the first half of 1986, up 21.0% from the comparable period a year earlier. Further, for the 10 money center firms, net income totaled $2.3 billion, up 14.2%. And for the 34 superregional holding companies, net income was $2.1 billion, up 22.2%.
- The top five bank holding companies in net income were all New York firms: Citicorp, with $505 million; J.P. Morgan, $470.9 million; Chase Manhattan Corp., $289.5 million; Bankers Trust New York Corp., rising two spots from yearend, with $220.2 million; and Chemical New York Corp., $200.9 million. First Wachovia Corp., Winston-Salem, N.C., and RepublicBank Corp. and MCorp, both Dallas, fell out of the top 25 in net income, since yearend rankings.
- From yearend 1985, the Mid-Atlantic and western banks performed below the rest of the top 100 companies, with assets declining 3.7% and 3.3%, respectively. ■

Regional Banks Likely to Do Well In Third Quarter

But Money Centers May Have Trouble Matching '85 Results

By JOHN P. FORDE

Third-Quarter Earnings

NEW YORK — When money center banks report their third-quarter earnings later this month, they may have trouble matching their results for the same period of 1985, because of sagging loan volume this year and one-time gains last year that can't be repeated.

Brent B. Erensel, an analyst with Dean Witter Reynolds Inc., expects only a 4% rise in earnings for money center banking companies. But he expects a hefty 13% increase for regional banking companies over the same quarter last year.

He warned that multinational banks, especially in New York, may face difficult year-to-year comparisons because the third quarter of 1985 "included a number of nonrecurring items." The largest of these were a one-time benefit caused by a change in the New York State income tax, and the payment of interest on Argentine loans that had been in arrears.

The only large nonrecurring item among major money center banking companies this year, he figured, will be a $60 million pretax gain recorded by Chase Manhattan Corp. on the sale of Computer Power Inc., a mortgage processing subsidiary.

Major nonrecurring items among regional banking companies include a 28 cent per share loss in foreign exchange activities at Mellon Bank Corp., Pittsburgh, and a $300 million gain at Minneapolis' First Bank System due to a gain on its securities portfolio. First Bank System will offset this gain with a $270 million writedown of loans and a $30 million writedown of real estate.

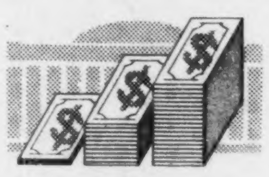
Cut in Thrifts' Home Lending May Be By-Product of Tax Act

Experts Say Deduction Formulas Favor Diversification

By NINA EASTON



Thrifts

LOS ANGELES — The tax bill passed by Congress last weekend could prove to be the Federal Home Loan Bank Board's worst enemy in its efforts to keep the attention of the nation's thrifts focused on home lending, many tax experts and industry officials say.

The tax bill "may remove some of the inducements to stay in home lending," said Douglas McEachern, national director of Touche, Ross & Co.'s savings and loan practice.

"Thrifts will diversify more because of the [tax changes]," said Thomas R. Bomar, managing officer of AmeriFirst Federal Savings and Loan Association in Miami.

The reason, these officials say, is that the tax bill reduces the incentive for maintaining a portfolio heavily weighted toward residential property assets.

The tax-overhaul bill sharply cuts a generous tax break that was reserved for savings and loans with portfolios dominated by home mortgages. While thrifts previously could take a deduction for their bad-debt reserves of as much as 40%, they will only be able to take 8% under the new tax bill.

In addition, the tax bill makes it easier for diversified institutions to take advantage of what's left of that break. Now institutions will only need to keep 60% of their assets in housing-related investments to take advantage of the bad debt deduction; that's down from 82% in the current tax code. (Cash and

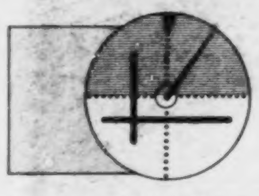
Metropolitan Life Stokes Century 21 As Distributor for Financial Products

By LYNN BRENNER



Corporate Strategy

NEW YORK — Metropolitan Life Insurance Co. is forging ahead with ambitious plans to turn the Century 21 Real Estate Corp. into a distribution network for its financial products — even as Merrill Lynch & Co. abandons a similar real estate network and ambitions after a decade of investment.

Metropolitan Life now is recruiting and training an entirely new 650-person sales force to sell financial products exclusively to Century 21 customers. By early 1988, these agents will be offering insurance and investment products and mortgages to Century 21 customers throughout the United States and in Japan, said Pierre Maurer, vice chairman of Metropolitan Life.

The salesmen will work out of the insurance company's offices, selling through a not-yet-established computer hookup among Metropolitan Life, Century 21, and the former CrossLand Capital, now called Metmor Financial Inc.

Metropolitan Life spent a total of $451.2 million last year to acquire Century 21 Real Estate Corp., the nation's largest real estate sales chain, and CrossLand Capital Corp., the fifth largest mortgage banking firm.

Meanwhile, Merrill Lynch said on Monday that it hopes to sell its own real estate brokerage and mortgage operation for more than $500 million. Merrill said it has concluded its money is better invested in traditional securities businesses than in a continued effort to establish synergy between 11,000 account executives and 14,000 independent real estate brokers.

The firm had spent more than 10 years and hundreds of millions of dollars expanding its 500-office residential real estate network.

Mr. Maurer said that the Metropolitan Life and Merrill Lynch real estate operations are not comparable at all. The two organizations, he said, are "entirely different."

As a securities broker, Mr. Maurer said, Merrill Lynch lacks the insurance products needed at the point of a real estate sale, and its affluent customers do not need help getting mortgages. "They're dealing with a very affluent, very sophisticated customer with established financial services relationships," he explained.

Century 21, like Metropolitan Life, serves the middle market. Mr. Maurer said that 42% of the real estate brokerage chain's customers are first-time

Baker Touts Plan at Work In Mexico Deal

By GORDON MATTHEWS

WASHINGTON — Treasury Secretary James A. Baker 3d asserted on Wednesday that a new financial package for Mexico is the first "concrete example" of the lending banks' willingness to offer new money under his year-old plan to ease the debt crisis among developing nations.

After several days and nights of difficult talks, Mexico late Tuesday night won a significant reduction in the cost of funds from its bank creditors on a $43.7 billion rescheduling of old debts and a $6 billion new money facility, part of which will be cofinanced with the World Bank.

James A. Baker

The hours-old tentative agreement gave Mr. Baker a tangible bit of success to tout as he defended his debt initiative against both doubters and critics during a speech to the joint annual meeting of the International Monetary Fund and the World Bank.

Claiming that the "earliest returns" are encouraging, the Treasury secretary said that he had stressed from the start that his program — officially dubbed the "Program for Sustained Growth" — would be a long-term effort.

"The debt problem took years to unfold, and each nation's challenge is unique," he said. "So we must expect that they will progress at different paces, and that the overall solution will be neither quickly nor easily attained."

In his initiative, outlined at last year's IMF-World Bank meeting, Mr. Baker called on banks to provide $20 billion of new financing over three years as debtor nations implement economic reforms and turn from austerity to more growth-oriented policies. International agencies were also to provide new funds.

But little progress has been apparent since then, and Mr. Baker's proposals have sometimes been labeled unrealistic or too optimistic. Several leading bankers have said that they were "still waiting" for a chance to act under the initiative.

The Treasury secretary himself was cautious in reviewing the banks' part in the plan. "While most banks have pledged their commitment to this effort, we should not score this as a success until the financing to support the

The "In the News" column on Sept. 12 (page 3) misstated the asset figure for First of America Bank Corp. The company has $5.5 billion in assets. ■

Citicorp Loses More Key Executives in Europe

Investment Bank Chairman, Two Citibank Savings Execs Submit Resignations

By PETER FIELD

LONDON — Citicorp is losing three more senior executives in Europe.

The chairman of the Citicorp Investment Bank Ltd. in London, John C. Botts, announced on Monday that he will leave at the end of the year to set up his own investment banking firm.

The managing director of Citibank Savings, Anthony Lee, also is leaving, although it has not been announced officially yet.

CITICORP⊕INVESTMENT BANK

Another officer, Eric Mahoney, the executive director for the mortgage banking division of Citibank Savings, left last week. Confirmation of Mr. Lee's impending departure came from Mr. Mahoney at a joint "leaving party" for him and Mr. Lee at Citibank Savings on Tuesday night.

Analysts in New York and London said that while they saw no connection in the resignations of the three men, the loss of such high-level executives had to be troubling to the bank.

"The disturbing thing is that these resignations cover areas that the bank has been heavily committed to — areas where they have been spending a lot of money for a long time," said Bryan Crossley, senior international equity specialist at Merrill Lynch Capital Markets in London.

With three such resignations on the same day, Mr. Crossley said, "You have to ask what the heck is going on."

Lawrence Cohn, a banking analyst at Merrill Lynch, New York, minimized the effect of the resignations, however. With Citicorp's very large work force in London, he said, the resignations of senior people do not have nearly the same damaging effect as on a smaller institution.

Kent Price, Citicorp senior vice president in charge of United Kingdom operations, and Dolph Zubick, head of European consumer banking operations, both resigned earlier this year. The Citicorp Investment Bank in Switzerland lost three key people in June. And last week, three analysts left Scrimgeour Vickers, Citicorp Investment Bank Ltd.'s stockbroking operation in London.

The new company that Mr. Botts, 45, is setting up will be associated with a New York investment bank, Allen & Co., and will concentrate on corporate finance, direct investing, venture capital, and leveraged buyout financing. It will have $3 million in capital and be based in London, Mr. Botts' home for 13 years.

Glen R. Moreno, group executive of the Citicorp Investment Bank for Europe, the Middle East, and Africa, said the departure of Mr. Botts was "very

Make Way, Big Four — TSB Group Joins British Bank Majors After Its Controversial but Popular $2 Billion Stock Sale

LONDON — From now on, it will be necessary to talk about the big five British banks instead of the big four. The TSB Group (formerly the Trustee Savings Bank) has joined Barclays, National Westminster, Lloyds, and Midland with a politically controversial but enormously popular sale of shares to the public, which has taken it to fourth place in the capital rankings of British banks, ahead of Midland.

The TSB Group, with nearly 1,600 branches throughout the United Kingdom and assets of more than $17.25 billion, was previously unincorporated. The issue of shares worth $2.16 billion gives it a higher market capitalization than Midland.

UNITED KINGDOM

The TSB Group's arrival in the big league — with $3.41 billion in equity and reserves, it's now in the top 20 in the world, ranked by capital — is remarkable for two reasons. First, being a totally domestic bank, it has virtually no overseas exposure, only 0.5% of assets. "The TSB issue is a golden opportunity to buy a bank cheaply without any Latin American debt," said an American fund manager in London.

Second, in these days of public worry about the health of the banking sector, the TSB Group attracted greater interest than any previous equity issue in the U.K., even the $5.61 billion British Telecom issue of 1984. Nearly five million applications seeking a total of 11.2 billion shares were received by the deadline on Sept. 24. That meant the issue of 1.5 billion half-paid shares, (the second half is payable in September 1987) at one pound British — or $1.44 — each, was eight times oversubscribed.

The TSB Group announced on Sept. 29 that more than three million people will receive shares, compared with 2.3 million in the British Telecom issue. TSB staff and customers of the bank are guaranteed allocations, though less than they sought. The rest of the applications have gone into a ballot and only one in two will be lucky. Again, the allocations will be scaled down considerably.

Institutional investors will be the most disappointed. Those applicants who wanted between one million and three million shares will get only 10,000; the 145 who wanted more than 3 million will get none at all. In contrast with the British Telecom float, foreign investment in TSB was discouraged as a matter of policy: Applications were limited to those with a British address and paying with a sterling check drawn on a British bank account.

Stock Price to Rise

The lure for investors was the certainty that the price would go to a substantial premium when trading in the shares starts on Oct.10. The certainty stemmed from the manner in which the TSB issue was floated.

The government of Margaret Thatcher has treated the TSB sale as part of the privatization program of state companies like British Telecom and Jaguar because it's keen to promote wider share ownership. Some depositors in TSB objected. They believed they owned the bank, and that selling to the public at large would dilute the principles of the founders.

The origins of TSB go back to 1810 when the Parish Savings Bank was established by the Rev. Dr. Henry Duncan in Rughwell, Dumfriesshire, on the west coast of Scotland just north of the English border. The aim of the pioneers of what became the Trustee Savings Bank movement was to serve the poorer sections of the population and plow back profits into the banks.

For the management of TSB, the restructuring of the group that culminated in the issue of shares was crucial. The trustee structure was cramping their ability to plan and to adapt to the rapidly changing financial services sector. They needed a strong capital base to expand and to obtain access to capital in the future. And they wanted to establish accountability for the group through wide share ownership. Spreading the shares widely also had another advantage.

"We wished to attract a very large number of members of the public as shareholders to increase our potential customer base," explained chairman Sir John Read, an industrialist who joined TSB in 1980 from the entertainment group EMI.

Legal proceedings by existing depositors delayed the original date of the float from February 1986. But after court battles and a House of Lords ruling, as well as much political controversy, the final legal decision in August was that TSB belonged to the state. This was embarrassing for the Thatcher government since it had already concluded that TSB didn't belong to anyone and it had given the go-ahead for the share offer.

As Terry Smith, an analyst at broker de Zoete & Bevan, noted: "Since neither the depositors nor the state has successfully claimed TSB Group's existing reserves of $874 million, these are effectively being given away. Consequently, the shares are inevitably being offered at a significant discount to net asset value."

Shares at a Discount

That discount is reckoned to be around 26%, while most U.K. banks at present trade around net asset value. The prospective price/earnings ratio for the TSB Group is 7.6, close to the 7.9 of the Scottish clearing banks (which also have high quality assets deriving from their low international exposure). But it is somewhat higher than the other leading clearing banks such as Barclays (5.9) and National Westminster (5.8).

In fact, broker Wood Mackenzie & Co. believes: "The TSB Group deserves to command a more demanding rating than the Scottish banks — a premium of around 5% to 10% above their p/e multiple appears reasonable."

Much depends on how the TSB management deploys the capital injection of $1.93 billion (the net proceeds of the issue) over the next year. Obviously, some of the proceeds will be spent on expanding the branch network in the south of England, where TSB is underrepresented, and on technology and automation.

But according to Peter Toeman, analyst at Phillips & Drew in London, "these objectives alone will absorb only a fraction of the extra capital." Projected capital expenditure is only about $150 million a year. The group already is underlent and it could, says Mr. Toeman, expand its balance sheet by 50% a year for the next five years before its free equity ratio fell back to the U.K. banking industry average.

A major acquisition seems the only way to achieve an acceptable return on the new equity. The group is forecasting a pretax profit of $278 million for its financial year ending Nov. 20, up 14% from a year earlier. The forecast for net income is $171 million, a 9.2% rise.

Simply investing the new capital in

Random Thoughts

By SANFORD ROSE

The Federal Reserve Bank of New York has just issued a weighty tome entitled, "Recent Trends in Commercial Bank Profitability." The volume provides much revealing data and many pregnant insights — both first hand and second hand. Some gleanings, with editorial asides, follow.

Some bankers still think that the relative undervaluation of bank stocks is due to market inefficiency, fostered perhaps by the fact that bankers "poor-mouth" the business, in part to get better regulatory treatment. Other, perhaps more astute executives point out that market values are low in relation to book values because book values are fictitious. Some say that banks "are all walking around with assets under water," a phrase that used to apply to the investment account but now refers to the loan account.

Commercial bankers suffer from this problem because, unlike investment bankers, they don't routinely mark to market. Thus the investment banks' problems are "all out for people to see." The prob-

Minority-Owned Banks Show Growth In Assets, but Decrease in Net Income

By KENNETH J. HICKS

NEW YORK — Minority-owned banks continued to show relatively strong growth in assets, deposits, and loans for the third consecutive year, but net income dropped considerably in 1985.

Of those commercial banks that did show across-the-board improvements, according to *American Banker's* annual canvass of minority-owned banks, there was an apparent shift in investment strategy, as they switched to higher yielding securities.

The survey also found that the number of minority-owned commercial banks has dropped. In the past 12 months, nine commercial banks have been taken off the Federal Reserve Board's list of minority banks, either due to closings or transfers to nonminority ownership. Only one new bank has been opened, bringing the total number of minority-owned institutions to 92.

These and other findings are summarized in the tables on pages 20, 22, and 23. They include a complete listing of minority-owned commercial banks as identified by the Fed (a commercial bank that is more than 50% owned by a minority group), showing deposits, assets, net loans, and net income at the end of 1985; a summary table of the 10 largest minority banks in deposits and net income, and the largest by minority

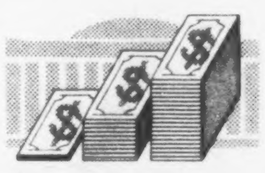
Gray Says S&L Tried to Hire Him Away

Institution Often at Odds With Regulator Made Offer

By BARTLETT NAYLOR

WASHINGTON — A thrift executive who has battled the chairman of the Federal Home Loan Bank Board over industry policies attempted to get the regulator to leave office by offering him a job, according to Bank Board officials.



Thrifts

Charles H Keating Jr., chairman of the board of American Continental Corp., the holding company for Irvine, Calif.-based Lincoln Savings & Loan Association, offered the job to Bank Board Chairman Edwin Gray on Nov. 22, 1985.

"I was frankly very surprised that an institution which had vigorously and continuously opposed key regulatory actions the board had both proposed and adopted would apparently be seeking to get me out of my job," explained Mr. Gray in a signed affidavit.

The affidavit was sent Sept. 19, 1986, to Sen. William Proxmire, D-Wis., who requested the information. Mr. Proxmire has been concerned about the practice of thrifts making direct investments in real estate, rather than in mortgages for home ownership.

It is this issue on which Mr. Gray and Mr. Keating have locked horns. California-chartered thrifts are empowered to invest all their assets directly in property, and Mr. Keating has taken liberal advantage of the freedom. Mr.

Major US Banks Seek Access To Tokyo Securities Markets

Only Handful of Foreign Banks Now Have Permission

By ANDREW ALBERT

NEW YORK — Several major U.S. commercial banks are seeking permission from the Japanese government to participate in Tokyo's securities markets, where they are faced with the same legal obstacles that impede their investment banking efforts at home.

Chemical New York Corp., J.P. Morgan & Co., Bankers Trust New York Corp., Manufacturers Hanover Corp., and BankAmerica Corp. are among those that have discussed the matter with the Japanese Ministry of Finance, according to banking sources in New York and London.

Jeff Edwards, a director with Chemical Bank International, Chemical's London-based merchant banking unit, said U.S. banks seeking to enter that market were each handling the matter separately, but added, "It's not something that Chemical alone, or Morgan Guaranty alone, will be able to resolve." Mr. Edwards said Chemical Bank International, which is the Chemical unit that would offer securities services in Japan, is handling the talks in Tokyo.

Open access to Tokyo's securities markets is viewed by American money center banks as a key element to their global strategy. In recent years, financial institutions from the West have been attracted by Japanese investors — individuals and corporations — and their strong hunger for U.S. government securities and Eurobonds.

"Without a [Japanese] securities license, you are limited to selling securities to the top 120 financial institutions in Japan — and that doesn't include industrial companies or individuals," said Douglas Ebert, who heads the investment banking sector at Manufacturers Hanover. He said his company has discussed its license request with the Ministry of Finance several times in the last year — most recently last month — and expects a decision from the Japanese agency within the next six months.

Thus far, the Japanese ministry has opened the door for only a handful of foreign banking companies. As in the

Mutual Fund Industry Surges Past S&Ls For 2nd Place in Total IRA, Keogh Assets

By PHILIP T. SUDO

NEW YORK — Mutual funds have overtaken savings and loan associations in their share of the individual retirement account and Keogh market, according to a study released Monday by a Washington, D.C.-based research group.

The study, produced by the Employee Benefit Research Institute, showed that through April, mutual funds held $55 billion in IRA and Keogh assets. By comparison, the S&L industry held $54.1 billion at June 30, 1986 — an increase of 20.8% from the previous 12 months. But the S&Ls were outpaced by the fund industry's 69.8% year-to-year gain.

As a result, the fund industry now holds the second largest market share for IRAs and Keoghs, with a 20.5% slice of the pie. Commercial banks, which hold $70.1 billion, own 26.1% of the market.

Total IRA and Keogh assets jumped 35.3%, to $268.7 billion, during the year ending June 30, 1986, the study showed. (The Employee Benefit Research Institute does not distinguish between IRA money and Keogh money, although most of it is known to be in IRAs.)

The forthcoming federal tax law changes will reduce the incentive for many workers to contribute to IRAs, but with the rules not scheduled to go into effect until April 1987, IRA marketers still have six months under the existing contribution rules to try and match last year's gain.

The institute's study showed that mutual funds, brokerage houses, and credit unions all gained market share in the 12-month period, while commercial banks, thrifts, and life insurers all lost share. The fund industry added 4.2% to its share of the market, which nearly matched what banks and thrifts lost — 2% and 2.5%, respectively.

In addition to providing figures on the existing market, the study projected the effects that the tax law changes might have on IRA and Keogh contributions.

Under the tax reform changes awaiting President Reagan's signature, present IRA rules would apply to anyone who is not covered by an employer-sponsored pension plan; individuals whose taxable income is $25,000 or less; and joint filers whose adjust gross income is $40,000 or less.

Individuals with taxable incomes greater than $35,000 a year and joint filers with adjusted gross incomes greater than $50,000 would not be eligible for a deduction, though they could still contribute up to $2,000 a year and earn interest deferred from taxes.

Individuals with adjusted gross incomes between $25,000 and $35,000

International Labor Federation Raps Barclays for Union-Busting

GENEVA — Barclays Bank has acted in an "aggressive and antiunion manner" in seeking to prevent unionization of the Barclays Bankcard Center, the Concord, Calif.-based credit card department of Barclays Bank of California, according to the International Federation of Commercial, Clerical, Professional, and Technical Employees. Barclays employees in California have a right to organize and be represented by an outside third party, asserted to the federation, most commonly known by its French initials FIET, for Federation Internationale des Employes et Techniciens.

The international union movement will launch a further campaign to try to unionize Barclays staff in California in 1987, it said.

In reply to the federation's charges, J.A. Kerslake, general manager at Barclays world headquarters in London, said in a letter to federation general secretary Heribert Maier that the tone of the dispute between Barclays and the union group's U.S. affiliate, the Office and Professional Employees International Union, or OPEIU, "would have seemed aggressive . . . had the distribution taken place within a European framework."

But labor disputes in the United States are different, Mr. Kerslake told Mr. Maier. "There is a very specific code of practice relating to campaign conduct, which both the employer and the union are required to adhere to," Mr. Kerslake said. "This code is prepared by the National Labor Relations Board, and I am satisfied that the communications put out by the bank in California fell within the rules of conduct."

The federation's complaint, and Mr. Kerslake's reply, stemmed from attempts by the Office and Professional Employees International Union earlier this year to organize employees at Barclays' credit card center. According to Philip Jennings, secretary of the federation's banking section, the attempts, which have so far been unsuccessful, were thwarted because Barclays management took such an aggressive stand that employees backed away from any involvement with the union. It was these charges that Mr. Kerslake specifically denied in his letter to Mr. Maier.

Charges Barclays Violated NLRB Rules

In its original complaint to Mr. Kerslake, the federation charged that members of Barclays management in California had violated the National Labor Relations Board's rules by circulating interoffice memos that warned employees not to join the Office and Professional Employees International Union. These memos, according to the federation and Mark Reader of the New York-based Office and Professional Employees International Union, were unfair, in that they painted a picture of a union that could not guarantee wage increases, job security, better working conditions, or even retention of current benefits. The memos, as quoted by the unions, said that Barclays' track record in labor relations is better than that of the unions.

The New York group's attempt to organize the employees was a failure, but officials claim that this was due to Barclays' having violated federal labor law on numerous occasions during the organizing campaign.

This was specifically denied by Barclays' Mr. Kerslake in his letter to Mr. Maier, in which he noted that the Office and Professional Employees International Union had never filed any charges of unfair practice during an election in Barclays California branches or in the five-day period afterward that the National Labor Relations Board stipulates. The balloting took place on July 10. An insufficient majority of Barclays' credit card center employees voted to join the Office and Professional Employees International Union.

"You will understand that the effort to organize was concentrated in the bankcard department of Barclays Bank of California, and it is stated explicitly in notes to all staff in the bankcard area that their right to organize and be represented by an outside third party, if they so choose, is recognized absolutely by the employer," Mr. Kerslake said.

While accepting the defeat, the international federation said it would return to the battlefield at a later date.

"I am not convinced that the bank should act in such an antiunion fashion simply because others do, and I find this impossible to reconcile with a bank which claims to have a constructive industrial relations policy," Mr. Maier said in replying to Mr. Kerslake's letter.

Also Takes Up Cudgels Against Mellon

In a related development, FIET said that it is also taking up the cudgels on behalf of janitors allegedly dismissed by Mellon Bank in Pittsburgh earlier this year under unfair conditions. The AFL-CIO said that at the beginning of the year the janitors were suddenly relegated to part-time status with lower wage rates and reduced pension rights.

Should that be true, according to Federation Internationale's Mr. Jennings, it would call into question Mellon's labor relations worldwide, which Federation Internationale is looking into.

These charges, according to the Aug. 23 issue of the *AFL-CIO News,* stem from a complaint by the Service Employees International Union that Mellon has fired its unionized janitorial contractor and brought in a nonunion firm "to bust the wages and benefits of its long-term workers."

Local 29 of the Service Employees Union, according to the *AFL-CIO News,* has filed suit in federal court against Mellon, charging it with breach of contract.

— **John Parry**

IRA Watch . . .

➻ Continued from Page 2

and joint filers with taxable incomes between $40,000 and $50,000 may take a partial deduction.

According to the Employee Benefit Research Institute, which based its numbers on an in-house pension and earnings survey and analysis of 1985 tax data from the Internal Revenue Service, there were an estimated 24.4 million IRA holders by the end of the 1985 tax year. Of those, 73%, or 17.8 million, had employer-sponsored pension coverage.

Twenty-seven percent did not have employer-sponsored pension coverage. An additional 46% were covered but earned less than $25,000 as individuals or $40,000 as couples. In other words, even if the 1987 rule changes had been in effect for tax year 1985, the 27% without coverage and the 46% with coverage but below the income cutoff would have been eligible to take the full deduction.

Continuing that analysis, the study said 12% of the 24.4 million IRA holders would have been eligible for a partial deduction under the 1987 rules, and 15% would only have been able to make a nondeductible contribution. Had those rules been in effect, the study estimated, 1985 IRA contributions would have been approximately $10.3 billion lower than they were. ■

Deposit Insurance

➻ Continued from Page 3

ing of resources of the FSLIC and the FDIC, the report says, and could avoid a situation of using public funds to support the deposit insurance system. It is not clear whether current plans to recapitalize the FSLIC with between $16 billion and $22 billion over the next five years "will prove to be sufficient," the report says.

- Implementing risk-based deposit insurance premiums in a transition period for the banking industry could prove destabilizing, especially if the practice of de facto 100% insurance protection for larger institutions is eliminated. Risk-based capital requirements, which would impose additional funding requirements on riskier institutions, will take time and not appreciably aid the current problems of insurance fund adequacy.
- If the FDIC and the FSLIC were to be merged, a separate premium structure for the two industries could be maintained (FSLIC-insured institutions now pay more than twice as much for deposit insurance as do FDIC-insured institutions, as a result of FSLIC supplemental premiums). "This difference in premiums can be viewed as the only form of risk-based premiums in the current system," the report says, and serves to offset some of the advantages thrifts have through lower capital levels.
- Failure to coordinate deposit insurance reform efforts between the commercial banks and thrifts would "exaggerate differences" between the two industries.
- Higher capital requirements in the short run might help stem losses incurred by the federal deposit insurance funds, but "it is unclear how such a change would affect the decisions made by depository institution managers."
- Other ways to improve stability and control risk in the industry include requiring collateralization of deposits, by restricting the investment of insured deposits to lower risk assets. Thus, such deposits could not be used directly to make commercial loans, equity, or "other high-risk investments," the GAO report states. Also, insurance losses could be cut if a "federal depositor preference" statute were enacted, which would clarify insurance fund backing to certain depositors over nondepositors or creditors, the report suggests. ■

California Banks Get Mixed Results Selling Farmland at Auctions

Special to the American Banker

SAN FRANCISCO — The scattered auction method of disposing of banks' repossessed farmland is getting a big test in California.

Bank of America sold 17 of 23 farm properties it offered at a two-day auction in late September that attracted about 4,000 inquiries and 200 bidders. The auction was believed to have brought together the largest number of farms ever put up for bids at one time in California history.

Now, the Farm Credit Bank of Sacramento is planning to auction 39 California farms and ranches at a similar event Nov. 1 and 2. It is asking a total of $11.3 million for the properties, which are located in 12 counties and produce a wide variety of crops.

As with the Bank of America sale, the two-day auction will be heavily advertised in the United States and even in Europe and Asia by the auction firm, Kennedy-Wilson Inc. of Santa Monica, Calif.

In May of this year, the Farm Credit Bank of Sacramento tried the scattered, or multiple-property, auction approach for unloading farmland and raised $1.4 million by the sale of six farm properties. That auction was widely viewed as a success.

However, results of the Bank of America auction on Sept. 27 and 28 disappointed the San Francisco-based bank, the largest agricultural lender in California. The 17 properties sold for a total of $3,389,000, which was 76% of their appraised value.

"We would like to have obtained more money," Bank of America vice president H.G. Weichert said after the auction.

"We had hoped for 80% or something better than that," said Mr. Weichert, who heads a special Bank of America office in Sacramento that manages agricultural properties which the bank acquires through foreclosure or negotiated debt-resolutions.

"We're averaging over 80% of appraised value on other sales" of repossessed farmland, Mr. Weichert added. His office sells properties directly and through brokers.

Bank of America will continue to try to sell the properties not sold last weekend, but at higher prices than the minimum bids required for the auction, Mr. Weichert said.

Interest among bargain-hunters in the upcoming Farm Credit Bank auction would be heightened by the fact that 35 of the 39 properties will be sold to the highest bidder, regardless of price.

Including the 17 parcels sold last weekend, Bank of America has 137 parcels of repossessed farmland with a total appraised value of $115 million. Seventy percent of the 214,000-acre total is rangeland. No rangeland was included in last month's auction. ■

One mortgage banker
has a lot more to offer than others.

At First Interstate Mortgage, we've got the entire spectrum of mortgage banking services covered.

As one of the nation's largest mortgage companies, we offer you the opportunity to take maximum advantage of our expertise.

Like the advantage of plugging into a network of 18 offices located in the most vital real estate areas of the country. Staffed by local professionals who know the market intimately. And can get things done quickly.

If you're a developer, we offer you the advantage of our unique talent for matching you with the right investor. And, the rare ability to see your particular project as a unique creation. Whether it's a retirement home, office building, R&D/industrial project or shopping center.

In short, First Interstate Mortgage can nurture your project from the earliest stages to completion. And beyond.

Additionally, if you're interested in an institutional joint venture, you'll have the advantages of creative equity sources and a partner to share the risks and rewards.

We're a subsidiary of First Interstate Bancorp, a multi-state holding company with nearly $50 billion in assets.

For more information call (818) 356-8000.

We've got mortgage banking covered from A to Zebra.

The Bond Buyer Municipal Bond Index

	Oct. 6, 1986	Oct. 3, 1986	Sept. 29, 1986
Index	98.07	97.29	97.06
Yield	7.49	7.53	7.61

The Bond Buyer Municipal Bond Index was designed by the Chicago Board of Trade to serve as the basis for trading Long-Term Municipal Bond futures contracts when approved by the Commodity Futures Trading Commission. The Index represents an average of the figures obtained when the price of each of 40 select term bonds is divided by a figure derived from the amount at which the bond would be priced to yield 8%. In all computations, the maturity of a bond is represented by its first call at par. The Index is computed daily and is quoted in points and 32nds.

administrative and management fees as well as other benefits that accompany the control of large sums of money.

As a result of the bank's action, Ms. Duke maintains, she has sustained damages that may well be in excess of $1 million for each day that Citibank has refused to terminate the trust.

The suit seeks both compensatory and unspecified punitive damages. ■

Minority . . .

Continued from Page 1

group; a comparison of the average minority commercial bank and the average mainstream federally insured bank by selected call report items; and a three-year review of the growth of each type of minority-owned commercial bank.

As of yearend 1985, total deposits for these banks were up 15.2%, to $4.9 billion, over the previous year. Assets grew at a 21.4% rate, to $5.9 billion, while net loans increased 15.3%, to $2.7 billion. Net income was down 13.9%, to $21.1 million from $24.5 million.

The asset figure is influenced, however, by an extremely large gain registered by Freedom National Bank, New York. Without Freedom's figures, assets were up 12.7% instead of 21.4%. Freedom grew to $534 million from $100 million at yearend 1984, due primarily to an upsurge in federal funds sold — $442 million — between Sept. 30 and Dec. 30, 1985. By March 31, 1986, however, Freedom's assets were down to $99 million. Though phone calls were not returned by Freedom National, one bank analyst suggested that Freedom National could be acting as a clearinghouse for a group of banks.

Several banks have been posting consistent gains in all four categories, and they all seem to be following similar strategies. Overall, compared with the average nonminority bank, minority-owned institutions appeared to be clearing out lower yielding U.S. securities in their portfolios and switching to "other securities."

In 1985, the average minority-owned bank showed a 5.9% decline in U.S. securities and a 26.8% rise in "other" securities (usually corporate securities), reducing the percentage of U.S. securities to total securities to 66% from 73% in 1984. In contrast, the average mainstream bank had a 3.2% increase in U.S. securities held.

Further, the more profitable minority commercial banks showed significant increases in federal funds sold, and were able to keep interest expenses down.

At Cathay Bank, Los Angeles, the largest Asian-American owned bank, assets, deposits, and loans were all up around 20%. Net income increased 42%, to $3.2 million.

Cathay Bank's U.S. securities were virtually unchanged, up 0.8%, while other securities held surged up 42.3%. Similarly, federal funds sold rose almost 31%. While interest income was up only 4.9%, interest expenses were down 3.2%.

International Bank of Commerce, Laredo, Tex., the largest minority-owned bank in the country, showed

INTENSIVE, 2-DAY SEMINAR WITH HOWARD L. SHENSON . . .

How To Use Seminars & Workshops To Sell Banking Products & Services

FACT: In the last two years the use of seminars and workshops as a strategic marketing tool has increased by 723%. Why?

There are four important reasons why leading marketers are adding seminars and workshops to the marketing mix..

1. **Complexity.** The sale of increasingly complex products/services often requires a detailed, sophisticated, educationally valid medium. Seminars insure quicker product adoption by the target market, greater use of offered services and far fewer post-adoption questions and concerns.

2. **Efficiency.** One major Fortune 50 financial services firm reduced the cost of obtaining a sale from $672 to $178 through the use of seminars. This is just one example of how cutting edge marketers are finding that seminars improve selling efficiency and enhance bank profits.

3. **Credibility.** Today's more sophisticated buyer responds to higher level, educationally legitimate rationales which inform while persuading. One major banking house introduces all new corporate banking services (and more than one-third of all new consumer services) with seminars—having discovered that hands-on demonstration/experience secures the sale/speeds adoption and reduces problems.

4. **Creativity.** The newness of seminars and workshops as a marketing device provides a fresh and different way to impact the market. Customer interest is aroused, the bank stands out from the competition. You will learn how several major marketers revived sleeping markets, gained market share with seminars.

Of course, some banks and savings institutions are discovering that Seminars can be a profitable venture in their own right. This Seminar not only shows you how to use seminars and workshops as a marketing tool but it details how to make seminars profitable and explains how you can create a new product—profitable seminars—if that's your objective.

MASTER THE MARKETING STRATEGY OF SEMINARS & WORKSHOPS. Performax, one of the Carlson Companies, is pleased to present the nation's foremost authority on the use of seminars as a marketing tool—Howard L. Shenson—in an intensive, hands-on, two-day **Seminars on Seminars.** We discovered the wisdom of Shenson's know-how when he served as a consultant to us.

FACTS VS. OPINIONS. This Seminar is based upon research of what works and why. Over the last 20 years, Shenson has obtained mountains of substantive field research data. You need not rely on opinions and guesses, your use of seminars as a marketing strategy will be based on hard, research data.

WHAT YOU WILL LEARN

Benefits/limitations of seminars as a marketing tool • Determining when to use seminars • When to charge/not charge for seminar attendance • How to test market a seminar for less than $1,000 • Four promotional models: One-step, Two-step, Pre-sale/Sale, Last minute fever • Seminars as a profit center in their own right • How to use direct-mail, telemarketing, media campaigns to build seminar registrations • In-seminar product demonstrations • How far in advance of a seminar to promote • Best times/days/weeks/months for a seminar • How to build seller credibility during the seminar • How to obtain credible seminar speakers at little/no cost • How to save valuable dollars in booking seminar facilities • Pre-registration vs. walk-in • The most profitable cities in which to conduct seminars • The best seminar test market locations • How to get others to promote your seminar at low/no cost • How to obtain university/association sponsorship for your program • How to title/describe seminars to gain maximum qualified enrollment • How to keep participants happy/interested • Direct mail/ad copy strategies unique to seminars and workshops • How to integrate seminars into your total marketing mix • And much, much more.

A WORKING SEMINAR: Don't plan to show up, sit back and jot down a few notes. You will be worked hard every minute! Bring your product/service (idea) to the Seminar. During the Seminar you will actually design the seminar marketing campaign and produce the promotional materials (e.g., direct-mail piece or ad). No wasted time—You produce tangible outputs while you learn!

FOLLOW-UP ASSISTANCE: Your Seminar does not end at 4:30 the second day. Call Shenson as often as you like following the Seminar with your questions.

QUESTIONS: Call Performax at 612/559-6327 or speak to Howard Shenson, the seminar leader/developer, directly at 818/703-1415.

ABOUT THE SEMINAR LEADER—HOWARD L. SHENSON has served as a consultant to more than 200 corporations (from Fortune 50 to small entrepreneurs) on the use of seminars as a marketing strategy, including a number of the nation's largest banking houses and credit card companies. He is publisher/editor of *The Professional Consultant & Seminar Business Report* newsletter, and the author of several books and cassette learning packages on the subject. He brings to the seminar more than 17 years of full-time consulting experience and three years of part-time consulting experience gained while involved in teaching and administrative positions at the University of Southern California and the California State University. A frequent speaker before national trade and professional associations, Shenson will share his vast know-how and experience, generously.

EARLY REGISTRATION BONUS: The first 12 paid registrants in each Seminar will receive one year subscription/extension to Shenson newsletter—*The Professional Consultant & Seminar Business Report* (value $96).

SLEEPING ROOMS have been blocked at each Seminar hotel. Full information upon receipt of your registration.

HOW TO REGISTER: Complete the coupon below and mail or phone Performax 612/559-6327.

SEMINAR MATERIALS & FEE: The fee for the 2-day Seminar is $495 and includes more than 200 pages of written materials for use during/after the Seminar, follow-up assistance and refreshment breaks. The Seminar is normally tax deductible and has been approved for continuing education credit.

Minority . . .

Continued from Page 17

similar year-to-year changes. Holdings of U.S. securities were off 7.5%, while other securities were up well over 50%; federal funds sold increased 26%; interest income jumped 10.6%; and total interest expense was up only 2.1%.

At all minority banks, noninterest income was up significantly as well.

Part of the reason for the poorer performance by the minority banks as a whole can be attributed to their location in urban, "high-risk" communities. Since they must also compete in the backyards of commercial banking giants in the same negative lending environments, in many ways they are at a disadvantage because of their smaller size.

Betty Tom Chu, president and chairman of Trust Savings Bank, Monterey Park, Calif., also pointed out that the bigger, mainstream banks are now targeting the more profitable midsize businesses in these communities, and, because of their resources, they have been able to woo away "the cream of the cream of our business sector."

Despite the odds, minority banks have been able to increase their net loans at a slightly higher rate than the mainstream bank, though in a different manner.

For the average minority bank, net loans were up 9.4%, compared with 8.7% at the average nonminority bank. However, the primary growth was in the commercial and industrial portion, rising almost 21%, while it rose 2.9% at the mainstream bank. Conversely, consumer lending was up only an average of 7.5% at minority banks, compared

† — Comparative data compiled by the Federal Reserve Board for banks over three years old. Comparison is for the average minority-owned bank (at least 50% minority-owned) vs. the average insured commercial non-minority bank. 1985 data includes 86 minority banks and 13,210 non-minority; 1984 includes 83 minority and 13,319 non-minority.

Minority . . .

Continued from Page 20

with an average rise of 16.7% at the mainstream bank.

This difference in consumer lending growth could be attributed to the rediscovery of the reliability of consumer lending. David Cates of Cates Consulting Analysts, New York, pointed out that losses on consumer lending tend to be far more consistent and predictable than commercial lending.

And while these mainstream banks target the best firms in the "high-risk" communities, other minority businesses may be getting squeezed out, offering greater business lending opportunities for the community-based minority bank.

- Asian-American-owned banks posted the strongest growth among the minority banks, not only for 1985, but since 1982. In those three years, deposits grew 73.1%, assets were up 69.7%, and net income soared 156.6%.
- Hispanic-American-owned banks also posted consistent gains since 1982, with deposits up 61%, assets up 60%, and net income up 9%, despite a downturn in 1984. Further, while representing 26.3% of the minority institutions, the 25 Hispanic banks accounted for 36.1% of deposits, 33.2% of assets, and 38.3% of 1985's net income. ■

Offer to Acquire BankAmerica May Open Door to More Suitors

First Interstate Bancorp's proposal to acquire BankAmerica Corp. for about $2.78 billion in stock may have opened the door for additional overtures to the giant banking firm, effectively putting it "in play."

But Security Pacific Corp., considered a potential bidder if First Interstate's offer is rejected, said Tuesday it will not make an offer for the San Francisco firm.

"We think it is important that BankAmerica remain an independent organization," said Richard J. Flamson, chairman and chief executive of Security Pacific. He said he assured Bank of America's management that "we stand ready to cooperate...in any way that we can to assist in meeting mutual objectives."

Another Security Pacific official hedged a bit. "It's been and continues to be Security Pacific's position that we are interested in building our customer base in California and the western states and in building shareholder value in the process," said Robert H. Smith, vice chairman. "We have also said that we're interested in seeing that BofA remains independent and we will work with them in any way that we can to that end."

BankAmerica's stock soared on the takeover news. In afternoon trading Tuesday, BankAmerica's common stock hovered at around $15 a share on heavy volume, up $2.75 from Monday's close.

Under First Interstate's proposal, each share of BankAmerica common stock would be swapped for 0.22 share of First Interstate common stock and one share of a new preferred stock val-

First Interstate Devises Intricate Plan To Lure BankAmerica into Its Fold

By ANDREW ALBERT

News Analysis

NEW YORK — Banking industry experts focused their attention Tuesday on how First Interstate Bancorp could afford to acquire BankAmerica Corp., a company twice its size, and still satisfy regulators by pumping fresh capital into the troubled San Francisco giant.

Even though many analysts believed First Interstate's offer was far too low to succeed, most agreed a First Interstate-BankAmerica combination offered rich benefits for shareholders of both companies and for bank regulators.

First Interstate's latest bid is the first to be seriously reviewed by BankAmerica board members, who have instructed the San Francisco company's management to take a closer look at the proposal. BankAmerica, realizing its vulnerability to outside suitors, has retained Salomon Brothers Inc. and First Boston Corp. as advisers.

Sources say Joseph J. Pinola, who is First Interstate's chairman and chief executive and a former BankAmerica official, is determined to prove that his proposed acquisition offers the best possible remedy for ailing BankAmerica, which lost a near-record $640 million in the second quarter of this year.

Mr. Pinola is also said to be fascinated with the opportunity to build a banking giant that could be a fierce

Capital Ratios At Top Banks Soar This Year

Primary Capital Rises Twice as Fast as Assets

By L. MICHAEL CACACE

NEW YORK — Primary capital grew more than twice as fast as assets during the first half of 1986 at the top 100 commercial banks, according to *American Banker's* latest ranking according to capital levels. As a result, primary capital as a percentage of assets for the top 100 rose 18 basis points to 6.79% on June 30 of this year from 6.61% on Dec. 31, 1985.

Top 100 Banks' Primary Capital
Tables Start on Page 30

Primary capital is the federal regulators' gauge of capital adequacy for banking institutions. Adequate capital is a buffer for a bank in times of poor performance. It helps maintain public confidence in a particular bank and in the banking system, promotes the safety of depositors' funds, and supports the reasonable growth of a bank.

At present, federal regulators require all banks to maintain a 5.5% minimum ratio of primary capital to aver-

Banks with Highest Primary Capital Ratios

Citibank (Delaware), New Castle	88.06%
Citibank (South Dakota) NA, Sioux Falls	12.89%
Morgan Bank (Delaware), Wilmington	12.52%
NCNB South Carolina, Columbia	11.50%
Republic National Bank, New York	9.80%

Primary capital is the sum of equity capital plus the allowance for loan and lease losses plus mandatory convertible debt plus the minority interest in equity accounts of consolidated subsidiaries minus "goodwill" placed on the books after 4/15/85. **Equity capital** is the sum of perpetual preferred stock, common stock, surplus, and undivided profits and capital reserves. In addition, for large banks, equity capital includes the cumulative foreign currency translation adjustments. **Mandatory convertible debt** is the sum of equity contract notes and equity commitment notes issued prior to 5/15/85. **Total capital** is the sum of primary capital plus secondary capital. **Secondary capital** consists of limited life preferred stock and subordinated notes and debentures (not included in primary capital) and long-term debt with an original maturity of seven years or more. All **capital ratios** shown above are calculated by **American Banker** using end-of-period assets. Please note that the Federal regulators' compute primary and total capital ratios using average assets plus the allowance for loan and lease losses. **(a)**—On 5/30/86, Wells Fargo Bank NA and Crocker National Bank merged under the latter's charter with the former's title. The Dec. 31, 1985 data are for Crocker National Bank. **(b)**—Changed head office location from Buffalo on 1/1/86. **(c)**—Bank changed title from American Bank & Trust Co. after merging First National Bank, Allentown, and Central Penn National Bank, Philadelphia on 4/21/86. **(d)**—Bank changed title from Atlantic National Bank of Florida on 6/9/86. **(e)**—On 3/15/86, Mercantile Trust Co. NA merged with Gravois Mercantile National Bank under the latter's charter and a new title. The Dec. 31, 1985 data are for Gravois Mercantile National Bank. **(f)**—Bank changed title from Bankers Trust of South Carolina on 4/28/86. **N.A.**—Not available.

Primary Capital Grows Twice as Fast as Assets at Top 100 Banks

Continued from Page 1

age total assets plus the allowance for loan and lease losses.

The new survey found that primary capital at the top 100 banks totaled $95.4 billion on June 30, up 4.9% from $91 billion on Dec. 31, 1985. Over this period, the assets of these banks rose by 2.2% to $1.4 trillion.

The survey published today consists of a listing of the top 100 banks in primary capital; a geographical breakdown of the top 100 banks; and a ranking of these 100 banks by three different capital-to-assets ratios: primary capital, equity capital, and total capital.

The *American Banker* ranks banks by primary capital because it is the current federal regulatory measure of capital adequacy. Primary capital is the total sum of the equity capital, the allowance for loan and lease losses, equity contract notes, and minority interest in equity accounts of consolidated subsidiaries, minus goodwill placed on the books after April 15, 1985.

However, primary capital can be a misleading measure of comparative capital adequacy. For example, a bank with substantial loan losses will have a sizable allowance for loan losses, which will inflate its primary capital and its primary capital ratio. The primary capital ratio for this bank is not comparable with the same primary capital ratio of a bank with an average loan-loss experience.

The regulators are aware of this problem and are moving toward a system of capital requirements based on risk. Adequate risk-adjusted primary capital will become a function of the asset composition of the bank.

(It is important to note that the *American Banker's* calculation of the primary capital ratio differs from that of the federal regulators. *American Banker* uses end-of-period assets, while the regulators use average assets.)

There was sizable growth in the equity capital component of primary capital, the survey found. Equity capital, which accounts for more than 73% of primary capital, rose 4.2% from $72 billion at yearend 1985 to $75 billion at midyear 1986.

Equity capital is the sum of perpetual preferred stock, common stock, surplus, and undivided profits and capital reserves. It is the excess of the bank's assets over its liabilities.

With respect to equity capital, the first half of 1986 was a very hot market for bank stocks. Interest rates stayed down, a factor which has traditionally meant good news for bank stock prices. The stock of many banks, especially regional institutions, sold at well above book value, which means that new equity could be sold without diluting the value of existing shares.

Other Survey Findings

- Citibank — the nation's largest bank in deposits and assets — was the top bank in primary capital with $8.2 billion on June 30, up 6.7% from $7.7 billion on Dec. 31 and up 13.5% from $7.3 billion a year earlier. Citibank is the lead bank of Citicorp, New York.
- Two other Citicorp bank affiliates also figure prominently in the rankings. Citibank (Delaware) in New Castle and Citibank (South Dakota) in Sioux Falls had the highest primary capital-to-assets ratios at midyear, 88.06% and 12.89%, respectively.
- The ratio of primary capital to total assets on June 30 ranged from a low of 5.22% for State Street Bank & Trust Co., Boston, to a high of 88.06% for Citibank (Delaware).
- Listing the top 100 banks in primary capital by their primary capital ratios, *American Banker* finds that the top 20 banks had ratios of 7.50% or more, while the banks ranked 81 to 100 had ratios lower than 6.25%.
- The average equity capital ratio for the top 100 banks in primary capital was 5.34% at midyear, up from 5.23% at yearend. The bank with the highest equity capital ratio was Citibank (Delaware) with 87.69%.

Many bank analysts consider equity capital to be a better measure than primary capital, because it is "the purest form of capital." It does not include the allowance for loan losses and subordinated debt. Also, the ratio of equity capital to total assets is considered a good measurement of a bank's ability to grow in the future and to withstand unanticipated losses.

The ratio also provides a good comparative ratio of capital adequacy among banks, and it is an easy capital measure for a bank to compute. In general, a bank is considered to have adequate capital when its equity capital ratio is in the 4% to 5% range.

All but two of the top 100 banks in primary capital had equity capital ratios greater than 4%. InterFirst Bank Dallas NA had a ratio of 3.70% and Bank of America had the lowest ratio among the top 100 — 3.33%. ■

Dear Reader, How Are We Doing?

The American Banker wants very much to make sure its coverage of the financial services industry meets your information needs. So would you spend a moment to give us some feedback on the statistical tables that appear in today's survey of the **Top 100 Commercial Banks in Primary Capital**? Over the past year we have incorporated many of your suggestions to provide more meaningful information. Please return this questionnaire to L. Michael Cacace, Statistical Chief, American Banker, One State Street Plaza, New York, N.Y. 10004. Telephone 212-943-4836.

1. How would you **change** the tabulation to make it more useful? What would you add?

Armacost Ouster Telegraphs Toughened BankAmerica Stand

By MICHAEL A. ROBINSON and ROBERT LUKE

Samuel Armacost

SAN FRANCISCO — The resignation of Samuel H. Armacost as chief executive of BankAmerica Corp. last Friday is but a first step in what is expected to be a difficult road to recovery at the nation's second largest bank.

The move, which came after months of rumors about Mr. Armacost's ouster, gives the troubled San Francisco banking organization some breathing room after last week's unsolicited merger bid from First Interstate Bancorp.

It also sends a signal to federal regulators, the investment community, and BankAmerica customers that the company is willing to take difficult steps to regain its profitability and prestige following a sustained five-year slump.

BankAmerica's board was expected to announce a successor to Mr. Armacost after a special meeting Sunday. Other top management changes also may be announced.

Speculation regarding a successor centered around A.W. "Tom" Clausen, whom Mr. Armacost replaced as the company's president and chief executive in 1981. Mr. Clausen, 61, who resigned as president of the World

League Says Special FSLIC Assessment Driving Thrifts to Convert to Banks

By JIM McTAGUE

WASHINGTON — The U.S. League of Savings Institutions claims that special assessments levied by the Federal Savings and Loan Insurance Corp. are the reason more of its members are converting to commercial banks, but thrift regulators claim the assessments have nothing to do with the trend.

Most of the 24 savings and loans attempting to leave the umbrella of the FSLIC are being purchased by commercial banks, a spokeswoman for the Federal Home Loan Bank Board said last week. The S&Ls want to escape the special assessments, which since 1985 have been levied by the cash-strapped FSLIC in addition to the regular annual premium they must pay for FSLIC coverage of their deposits up to $100,000.

The U.S. League is lobbying for legislation that would phase out the assessment over a period of about five years, but would give the Bank Board authority to reinstate it again. The House has passed the measure and the Senate is expected to take it up Tuesday.

The Bank Board, which adopted a regulation on Friday asserting its jurisdiction over the transfer of S&L assets to the FDIC, said there was no evidence to support the U.S. League's claim of assessment-related defections. But neither side could provide numbers to substantiate their respective claims.

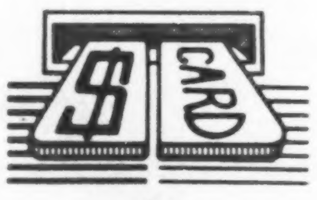
Docutel Pulls ATMs From Market in US

Pioneer Hurt by Delays In Delivering New System

By JEFFREY KUTLER

NEW YORK — Docutel/Olivetti, the first manufacturer of automated teller machines in the United States, is abandoning the domestic ATM market after 18 years of erratic profitability.



ATMs

Plagued by delays in delivering a highly touted new product, the company began telling U.S. customers about 10 days ago of its intention to discontinue ATM marketing.

It had announced plans earlier this year to close its manufacturing plant in Texas and to begin importing ATM products from Europe. But the plan could not overcome Docutel/Olivetti's sagging reputation in the midst of stagnant demand for ATM products generally.

Executives of Olivetti USA and its Dallas-based electronic funds transfer division, which is the former Docutel Corp., have made no formal announcement of the pullback pending notification of customers. Industry sources said they expected a press release to be issued later this month.

Telephone calls to Olivetti USA last week were not returned, but the *American Banker* confirmed the decision with several sources who had been in communication with the Italian-owned computer and office products firm.

According to these sources, Olivetti USA was chronically unable to meet delivery commitments on its latest automated teller machine, the ETS 6400. Some banks that already had been told of 30- to 60-day delays were

Funds Still Sought To Restructure Mexico's Debt

By GORDON MATTHEWS

NEW YORK — Bankers who spent all of last week trying to come up with $6 billion in new money for Mexico had apparently not succeeded by Friday.

The major banks that comprise the creditors' committee for the heavily indebted nation reportedly have had difficulty rounding up the support of other banks since a tentative agreement for the financial package was announced Sept. 30.

The banks are said to have been given until the end of this month by the International Monetary Fund to agree on the new financing. That is a condition of the IMF's own provision of $1.7 billion to Mexico, announced in July.

As in a number of other recent debt rescheduling operations, the IMF's contribution and that of the banks' depend on each other. The banks reached their provisional agreement during the recent IMF-World Bank annual meeting under heavy pressure from the United States government.

So far, it has reportedly proved difficult to actually gain commitments for the new funds from Mexico's more than 500 creditor banks. Last week, several senior bankers close to the negotiations said that they might not obtain more than 80% of the funds being sought from regional and non-American banks.

Any such shortfall from those banks would have to be made good by the major banking creditors, even if it ends up exceeding their share of all the banks' exposure to Mexico, since the IMF is insisting that the banks contribute a full $6 billion for the remainder of this year and 1987.

On Friday, William Rhodes, executive vice president of Citibank and cochairman of the Bank Advisory Group for Mexico, launched the selling of the package at a Washington meeting of 70 to 80 bankers under the auspices of the Bankers Association for Foreign Trade.

Meanwhile, in New York, the bank creditors committee continued to meet with Mexican officials to iron out wrinkles in the tentative package.

The $6 billion now being sought for

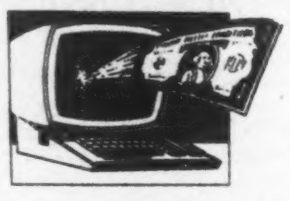
Aggregate Level of 'Daylight Overdrafts' Up Despite Limits, Federal Reserve Official Says

Board to Consider Further Reduction in Overdraft Caps Available to Banks

By TOM FERRIS

NEW YORK — Despite the introduction of limits on intraday bank overdrafts six months ago, the aggregate level of the so-called "daylight overdrafts" has increased, a Federal Reserve Board staff official said last week.



Cash Management

As a result, the Federal Reserve Board soon will consider whether it should further reduce the overdraft caps that banks can select for themselves, the Fed official, Elliott C. McEntee, said at a conference in Washington.

In a discussion of the Fed's plans in the payments area, Mr. McEntee also said:

- The agency's much-delayed proposals for reducing operating and credit risk in the automated clearing house network should be released for comment by the end of the year. Among the possibilities under consideration are limits on transaction amounts.
- Proposals to curb overdrafts associated with government securities transactions, which were excluded from the caps implemented last March 27, are also expected to be published before January.
- The board will review a study by its staff on whether the Fed should charge explicit fees for daylight overdrafts on the central bank's funds-transfer network, the Fed Wire. "It's too early to tell whether that study will lead to an invitation to comment on the desirability of charging for daylight overdrafts," Mr. McEntee said.
- A proposal to change the way the Fed recovers the cost of float in the automated clearing house will result in higher fees only for debit transactions that exceed $64,000. More than 90% of the debits initiated by corporations to centralize cash are lower than that threshold, and therefore it is unlikely that many electronic payments would be converted back to checks because of the plan.
- The board is reviewing the impact of the later presentment of checks by the Fed to a large number of banks nationwide. The later presentment deadlines were aimed at speeding the collection of checks by giving the Fed more time to process items for delivery to the banks on which they were drawn.

Under the program, about $10 billion worth of checks are being cleared one day faster, Mr. McEntee said. However, he added, it is possible that as a side effect of the Fed's efforts, an increasing number of banks and firms are using cash-management techniques that slow the clearing of checks.

"We plan to complete the study by next June," he said. "It is possible that this study could lead to some modifications in Reserve Bank check collection services and policies."

Mr. McEntee, the associate director of reserve bank operations for the Fed, spoke last Thursday at the Bank Administration Institute's annual conference on cash management. His comments included an update on the Fed's risk-reduction program, which prompted limits on the overdrafts banks could incur while transferring funds over the two major corporate wire-transfer networks, the Fed Wire,

Midwest Bankers Buck National Card Program

Discord and Cost Efficiency Lead Illinois and Ohio Groups to Issue State Cards

By RICHARD RINGER

CHICAGO — Independent bankers associations in two states have started credit card issuing programs instead of participating in the much ballyhooed program begun by their national trade group, the Independent Bankers Association of America.

The result is that the IBAA could get less revenue from its credit card arrangement, which independent bankers say has become the No. 1 priority of the national association's bank services committee.

The Independent Community Banks in Illinois next week will roll out its credit card issuing program that was organized after the state group could not reach an agreement with the IBAA over revenue sharing from the national association's card program.

"We attempted to renegotiate and compromise on the revenue sharing issue," said Robert Wingert, executive director of the Illinois group. "We did that in the spirit of unity. But they [IBAA] chose not compromise."

In August, the Community Bankers Association of Ohio implemented its own credit card issuing program for its member banks. The state program is less expensive for independent banks and will provide the state association with more revenue than what was possible by joining the IBAA program, said Scott Williams, executive director of the Ohio independent bankers group.

The defections by the Illinois and Ohio associations also are viewed in some quarters as:

- An embarrassment for the IBAA. The Independent Community Banks in Illinois is the second largest state group of independent bankers in the country. For such a large association to start a competing program probably will slow the anticipated growth of the IBAA venture.

Moreover, Mr. Williams of the Ohio independent group is given credit by some as conceiving the idea of a trade group starting a credit card program for member banks. He was preparing such a program for the Ohio group when he was asked to sit on the IBAA bank services committee, which was instrumental in getting the IBAA Bancard program organized. Mr. Williams, by some accounts, became frustrated with the IBAA effort.

Interstate Debates in Indiana, Colorado
Page 8

And even though the IBAA credit card program was unveiled months before the Ohio program, no Ohio independent bank has joined the IBAA program. So far, 16 Ohio banks have joined the state association's program.

- An indication that state associations aren't ready to fall in step with the IBAA. Adhering to the "independent tradition," state independent bankers associations clearly aren't prepared to unquestionably follow the national association leadership's views.

"State associations have heartbeats of their own," said Mr. Wingert of the Illinois independent group. State associations, he said, have "an agenda to fulfill" and "can't always be dictated to" by the national association.

"I have no problem competing with anyone outside the state," said Mr. Williams of the Ohio independent bankers.

- More intense competition between the IBAA and its state member organizations in providing services to banks that have the potential of generating substantial fee income to the providing association. Concern about continued consolidation of the banking industry that could dwindle their memberships has the national and some associations looking for revenue generating ventures. That's vital since membership dues and fees contribute a substantial income for the associations.

The situation in Illinois is an example. The number of independent banks in the state that are IBAA members has dropped to 570 this year from 620 the year before, said Mr. Wingert. During the same time, the number of banks that are members of Illinois independent group increased to 485 from 455.

Membership dues account for about 55% of the Illinois group's revenues, while educational programs provide 15%, services to members almost 20%, and the remainder coming from interest income on investments and other income, said Mr. Wingert.

Ideally, Mr. Wingert says he prefers the independent bankers to join and participate in the state association as well as the the national association. And, he says, he continues to stress that in meetings with bankers throughout

Corrections

An *American Banker* listing of the top 100 banks in credit card loans on Sept. 8 misstated the 1984 gross interest revenue from credit card operations for 87th-ranked United Missouri Bank of Kansas City NA. The correct number is $25.4 million for 1984, resulting in a rise of 10.9% to $28.2 million for 1985.

First Wachovia Corp., Winston-Salem, N.C., was omitted from a Sept. 30 listing of the top 25 holding companies by net income for the first half of 1986 because the bank submitted an incorrect net income figure. First Wachovia should be ranked 18th, with net income of $91.9 million over the six months.

Bancomer, Mexico City, revised its figures on total deposits and total assets at yearend 1985, affecting its world rankings. Total deposits on Dec. 31 were revised upward to $6.73 billion, making it the 228th largest bank in the world in deposits instead of the 271st, as reported in an *American Banker* listing on July 29. Its assets were revised downward to $7.81 billion, making it the 251st largest bank in assets instead of the 246th, as reported in a July 30 listing. ■

Leasing

CHICAGO — The leasing business has been a good source of income for U.S. banks. And even though new tax reform legislation threatens to change the way that business is done, bankers and other industry experts expect leasing to continue to be a profitable undertaking.

"The old ground rules in leasing have been taken away," said David Brown, who heads Wells Fargo Leasing Corp., a subsidiary of Wells Fargo & Co. "Those institutions which can assess the changes and have value-added products will survive."

The primary change in the ground rules that will drastically alter the leasing business is the elimination of the investment tax credit, which allowed the owner to deduct 10% of the cost of new equipment from federal taxes. Some people say the investment tax credit has been the motivation for some companies — both bank and nonbank leasing companies — to be in the business in the first place.

Under tax reform, the 10% credit against taxes is gone. But the leasing business, experts said, will remain.

The American Association of Equipment Lessors, the major trade association for the leasing industry, estimated that in 1986 the total amount of new business leased will be about $100 billion. That's about a 6.4% rise from the 1985 level of nearly $94 billion and is nearly double the 1982 level of $57.6 billion. This makes leasing one of the major sources of capital formation in the country.

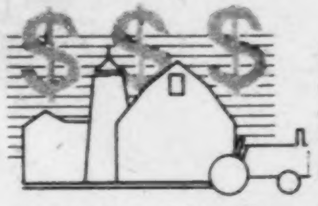
Family Farm Bankruptcy Legislation Draws Fire from Midwestern Lenders

By ANDREA BENNETT



Agricultural Lending

CHICAGO — A piece of federal legislation that creates a new chapter of the bankruptcy code specifically for farmers is alarming agricultural lenders across the Midwest.

The bill, which recently cleared Congress and has been sent to President Reagan for his signature, sets up a Chapter 12 for farmers trying to reorganize their debts. Supporters of the bill, which is modeled on a similar Depression-era law, claim it is necessary because farmers are not well served under current bankruptcy law.

But bankers claim the legislation will make it more attractive for farmers to file for bankruptcy, making lenders more leery about extending credit to marginal producers who would be most likely to use the new law. And some say that a provision of the bill that in some cases could slash in half the amount of the loan the farmer has to repay could impair the financial soundness of some agricultural lenders who have already been hard hit by the current agricultural depression.

"There is concern about [the legislation] across the Midwest," said Neil Milner, executive vice president of the Iowa Bankers Association. Mr. Milner

First City Loses; Texas Commerce Gains in Quarter

By DAVID LaGESSE

Third-Quarter Earnings

DALLAS — First City Bancorporation of Texas Inc. on Tuesday said it was forced to renegotiate a line of credit with seven correspondent banks as it prepared to announce a third-quarter loss of $47.9 million, or $1.56 per share. The banking firm earned $10.8 million, or 20 cents a share, a year ago.

First City, based in Houston, also said it would probably eliminate the remaining dividend on its common stock — now running at the annual rate of 10

Tax Reform Won't Kill Profits from Lease Business, Bankers Say

➻ **Continued from Page 1**

said bank participation is viewed as a growing segment of the business. Today, for the first time, the *American Banker* lists the results of a survey on the leasing activities of the 100 largest bank holding companies in the United States. The tables, which include the names of the 75 companies that responded to the survey and a listing of their lease financing receivables over the past two years, appear on pages 22 and 24.

Of the equipment lessors group's more than 900 members, approximately 26% are banks. The independents, which account for 34% of the membership, make up the largest membership category, according to the group.

And recently, the fastest growing segment of the business has been leveraged leasing, which in 1985 rose 47.5% and in 1984 increased 33%, based on a survey by the lessors association of its members. According to the *American Banker* survey of bank leasing companies, 48.3% are engaged in leveraged leasing, the largest single category of leasing activity.

Leveraged leasing, under which the lessor provides some of the equity for the purchase of the equipment and then borrows the remainder from one or several investors, is particularly attractive for the financing of such big-ticket items as airplanes. It's also one of the most profitable segments of the leasing business.

First Chicago Leasing Corp., a subsidiary of First Chicago Corp., has about half of its leasing portfolio in leveraged leasing, which is usually for equipment costing more than $10 million. The remainder of its portfolio is direct leasing, which provides lease agreements on smaller-ticket items. Both of these are tax-oriented leasing arrangements. And Geoffrey Stringer, president of First Chicago Leasing, expects to see the company's operations grow in spite of tax reform because, he reasons, corporations will still need to obtain new equipment.

"I believe capital spending is driven by the need for capacity and driven by economic activity," Mr. Stringer said. And leasing equipment still may be more economical than buying it, he added.

Leasing is one of its hottest financial products for First Chicago, and the leasing subsidiary is one of the bank's most profitable operations.

The new tax reform bill will change the ways in which companies do business, but in the end, Mr. Stringer is expecting the leasing business to grow.

For one thing, more banks may enter leasing because they will have larger tax bills due to changes in the tax law regarding the deduction of the loan-loss reserve and the elimination of the 80% interest deduction that banks use for the cost of purchasing and carrying new tax-exempt municipal bonds.

"This could mean more capacity [for banks] to be in the leasing business," Mr. Stringer said. Lessors will still be able to take advantage of depreciation and interest deductions on nonrecourse debt in leveraged leases.

Other changes in the tax bill, such as the 20% alternative minimum tax, may help out the leasing business. For instance, lessors that are subject to the alternative minimum tax will curtail their leasing activities. But it may also mean that some companies will find that leasing equipment makes sense since the "rent" or monthly lease charge will be deductible, while tax depreciation deductions will be curtailed.

Traditionally, leasing has been a cheap way for the lessee to acquire new equipment, because the lessor is able to pass along the advantage of the investment tax credit to the customer in the form of a lower lease payment. Leasing experts generally agree that these cost advantages will decline substantially under tax reform.

Currently, lessees may save several hundred basis points by leasing a piece of equipment rather than taking out a secured loan to purchase it. Some sources estimated that borrowed money might be priced at 8% or 9%, while the leasing price would be 4% or 5%. Under tax reform the savings won't be as great but it could still be attractive.

Mr. Stringer expects that the changes in the tax laws will mean some companies, especially nonfinancial companies that did leveraged leasing primarily for the tax advantage, will leave the market. Others expect the change in tax reform will mean more leasing companies will switch over to nontax-oriented types of leasing.

Exclusively For Senior Executives...

Introducing INFORMATION STRATEGY: The Executive's Journal. A brand new quarterly, this is the only publication devoted exclusively to information management concerns facing senior executives. The 48-page journal is written in a practical, non-technical, concise manner that will help you:

▲ Re-examine the importance of information systems on different strategic levels

▲ Make educated policy decisions about your organization's information technology

▲ Stay abreast of the latest thinking on key information related issues such as developing a corporate information policy

▲ Assess the efficiency and effectiveness of your own information systems department

▲ Use information to enhance the salability of your company's products and services.

Distinguished Panel of Contributors

Top executives from a broad range of industries write feature articles and columns that provide invaluable information to help you with problem-solving and strategic planning. Serving as the Journal's consulting editor is Alan D. Mazursky, Director of MAS, M. R. Weiser & Co. By tapping the best practical experience from the corporate world you can be assured that he and the expert panel of 35 advisors will provide exactly the information you need to know.

Concise and Thought-Provoking Content

Written from your perspective, INFORMATION STRATEGY: The Executive's Journal is devoted entirely to strategic information-related issues. All articles, columns, interviews, case studies and round-table reports are written in a concise, to-the-point style with each about three to five pages. Just right for your busy schedule!

Place Your Order Today!

For only $72, the Journal will provide you with an invaluable tool for problem-solving and strategic planning. Place your order today by clipping the coupon below or calling our toll-free number—it will be one of the best investments you will make.

Please note: the above listing gauges the size of the leasing operations of the bank affilates of banking firms only. These data do not include the leasing recivables of the nonbank leasing subsidiaries of banking firms. Since many firms conduct a substantial part of their leasing activities through these subsidiaries, the above listing is not a complete measure of the size of the leasing operations of many of the banking firms. For that reason, American Banker does not rank the banks listed above. The data are from the Federal regulatory report of condition and are provided by ADP Data Services Division. Please note that ADP adjusts prior years' data for current mergers. According to the Federal Reserve's report of condition definitions: **lease financing receivables** include all outstanding receivable balances related to direct financing and leveraged leases on property acquired by the bank for lease purposes. These balances include the estimated residual value of leased property and must be net of unearned income. The data are consolidated for banks with foreign offices and are from "Schedule C-Loans and Lease Financing Receivables"; "Column A- Consolidated Bank"; items 10.a.- "Of U.S addressees" and 10.b.- "Of non-U.S addressees". **Total Loans and Leases** are loans and leases net of unearned income. It is line item 4.a. from RC-Balance Sheet. **(a)**— Merged with Wells Fargo Bank NA in May. **(b)**— Formerly Suburban Trust Co. Changed title in April. **(c)**— Merged with Fidelity Bank NA, Malvern on Sept. 15. **(d)**— In Sept., Sanwa Bank Ltd., Osaka, Japan, acquired the bank and merged it into Golden State Sanwa Bank. Golden State Sanwa then changed its title to Sanwa Bank California.

Most Customers Feel Positively About Banks that Have Merged

Believe Institutions Are Same or Better than Before

By LAURA GROSS

NEW YORK — Americans whose financial institutions have been involved in mergers or acquisitions seem to feel positively about the combinations.

Most of the people who have experienced this kind of arrangement believe that their financial institutions are either the same sort of places to do business as they were before, or better.

About half of the people who do business with a merged or acquired institution see no change since the merger. One-fourth say the service improved, while 14% say it got worse.

How Consumer America Views the Changing Financial Services Industry

According to the *American Banker's* latest consumer opinion poll, one-fifth of the public say they do business with a financial firm that has merged with another recently.

The survey finds a difference in consumers' opinions about the quality of service after mergers involving local institutions compared with mergers involving out-of-state institutions. While a majority of these people also say the service is the same, those who feel that the quality of service changed after a merger involving two local institutions are more likely to say it improved. People who sense a change when an out-of-state institution is involved are more likely to say the service became worse.

Consumers whose financial institutions have been involved in mergers tend to think that those bought by out-of-state acquirers offer a wider range of services. More say fees go up when out-of-staters come in than when local institutions are involved in the merger, the survey finds.

These are among the results of *American Banker's* third national consumer opinion poll. The telephone survey was

AN **American Banker** SURVEY

conducted among 1,028 consumers this spring by Reichman Research Inc., an opinion research firm based in New York and San Francisco. Additional survey data were published in September and more will appear in future editions.

The data imply that "consolidation has not gotten anywhere near the stage where consumer satisfaction would be impaired by a lack of competition," comments Irving Leveson, senior vice president and director of research for the Hudson Strategy Group, a Marsh & McLennan Companies Inc. subsidiary based in New York.

Mr. Leveson is referring to the trend toward consolidation by merger among the nation's commercial banks. Some industry observers have predicted that, ultimately, this trend could produce a decline in the number of American banks from around 14,900 today to somewhere between 5,000 and 10,000 banks.

Wary legislators and regulators have voiced concern that consolidation will put most small banks out of business, replacing them with a handful of giant firms holding too much power along with most of the banking assets.

But the *American Banker's* findings indicate that, at least so far, the concentration of assets is happening in a fashion that does not upset consumers.

Perception of the Rate of Consolidation Page 45
Wells Fargo Gets High Marks in Merger Page 46

"The *American Banker* findings are in marked contrast to writings by people in national magazines who are constantly painting horror pictures about the adverse effects of mergers on competition," Mr. Leveson says.

Part of the reason, he says, could be the "emergence through a Darwinian process of a group of very successful firms in the second tier — the second 25 largest banks. They are growing very rapidly through merger and in

Frustration Climbs Halfway to the Stars in City by the Bay

SAN FRANCISCO — Close to 10,000 bankers, their spouses, sellers to the industry, and others are gathered here for the American Bankers Association annual convention, commercial banking's biggest bash.

Normally, it's a festive occasion, where bank presidents can swap executive tales, golf scores, and, sometimes, institutions.

But times are far from normal, and, if there is a single feeling among many attending bankers, it is one of frustration.

"Overall, I am optimistic about the future of banking and think banking will continue to play a major role in the financial services industry," said Randall A. Killebrew, president of First National Bank in Petersburg, Ill., and active in ABA policy affairs. "But until Congress is willing to define who is and who is not to be allowed to be in the financial services industry, we will continue to be frustrated.

This story was reported by Robert M. Garsson, Robert Luke, and Robert Trigaux. It was written by Mr. Trigaux.

"And that frustration will continue to be heightened," he says, by allowing such entities as savings and loans and the Farm Credit System to use accounting and regulatory rules less stringent than those applied to commercial banking.

While plenty of festivities are under way at the ABA meeting, invitations to bank-sponsored galas are fewer and more selective, reflecting more cost-conscious management. Pittsburgh's PNC Financial Corp., for instance, recently said in a letter to guests that it decided to discontinue its traditional ABA lunch, owing to its growing guest list and, "quite frankly, the rapidly ris-

New Giants Entered Mortgage Servicing Industry This Year

Commercial Banking Firms, Seeking to Raise Cash, Have Been Selling Mortgage Units at Lofty Prices

By L. MICHAEL CACACE

NEW YORK — New players kept entering the top ranks of the mortgage servicing field in the first half of 1986, a trend that began 18 months ago and continues to be fueled by acquisitions of mortgage banking companies.

The major new entrants have been insurance companies, the financial arm of the nation's largest auto company, and thrift institutions. These firms are attracted by the profit potential of mortgage banking. Unlike many other areas of the financial services industry, mortgage banking does not require significant market share to be profitable.

Commercial banking firms have been the major sellers. For example, from Dec. 31, 1984, to June 30, 1986, four new firms entered the ranks of the nation's top 10 mortgage servicers. Of the four, three entered the field by acquiring the mortgage company subsidiaries of four commercial banking firms.

Mortgage Banking Review
Section Starts on Page 9

The main reasons for the sale of mortgage servicing subsidiaries by banks have been the pressure to raise additional capital to meet federal regulatory requirements and the high prices mortgage servicing companies have fetched in recent years.

These are some of the findings of the *American Banker's* annual survey of the mortgage industry. The survey is based on permanent real estate mortgages serviced for investors. Mortgages owned by an institution, as well as forward commitments, home improvement loans, and all temporary financing such as construction loans and development loans are excluded.

Four major listings appear in today's edition: the top 100 mortgage companies in mortgage servicing on June 30; the top 100 commercial banks in mortgage servicing on June 30; the top 50 thrift institutions in servicing on March 31; and the top 25 firms in servicing, based on the combined servicing performed by their thrift, bank, and mortgage company subsidiaries.

A listing of the top 300 mortgage firms will be published in the near future.

The four new nonbank firms to enter the ranks of the top 10 within the last 18 months are the top-ranked GMAC Mortgage Co., Philadelphia; fourth-ranked Fireman's Fund Mortgage Corp., Farmington Hills, Mich.; sixth-ranked CityFed Financial Corp., Bedminster, N.J.; and seventh-ranked Metmor Financial Inc., Los Angeles.

• GMAC Mortgage Co., Philadelphia, is a subsidiary of General Motors Acceptance Corp., the financing arm of General Motors Corp. GMAC Mortgage was servicing $21.8 billion in mortgages for investors on June 30, 1986, up 6.9% from $20.4 billion at yearend 1985, when it surpassed Lomas & Nettleton Financial Corp., Dallas, as the top mortgage servicing firm in the nation.

GMAC Mortgage began operations in the first half of 1985, acquiring the fourth and ninth largest servicers in the field. Norwest Mortgage Inc., Minneapolis, and its $11.1 billion portfolio, was acquired from Norwest Corp. in March of 1985 for $125 million; and Colonial Mortgage Service Co., Philadelphia, and its $7.4 billion portfolio, was was acquired from CoreStates Financial Corp. in April 1985 for $190 million. By midyear 1985, GMAC Mortgage was the second largest firm in the business with $19.3 billion in servicing.

• Fireman's Fund Mortgage was formerly known as Manufacturers Hanover Mortgage Corp. Fireman's Fund Mortgage is a subsidiary of Fireman's Fund Corp., the insurance holding company based in Novato, Calif. Fireman's Fund Corp. acquired the company from Manufacturers Hanover Corp., New York, for $260 million. The effective date of the acquisition of the company and its name change was June 30. Fireman's Fund Mortgage serviced $14.8 billion in mortgages on that date.

• CityFed Financial Corp., Bedminster, N.J., a thrift holding company, acquired Kissell Co., Springfield, Ohio, on June 1, 1986, from PNC Financial Corp., Pittsburgh. Kissell was the 17th largest mortgage company on June 30, with $6.6 billion in servicing. CityFed Financial's thrift unit, City Federal Savings Bank, Elizabeth, N.J., services mortgages through its mortgage division, CityFed Mortgage Co., and ranked fourth among thrift institutions in servicing, with $6.6 billion in mortgages serviced for investors on March 31.

• Metmor Financial Inc., formerly known as CrossLand Capital Corp., was acquired by Metropolitan Life Insurance Co. from CrossLand Savings FSB, Brooklyn, N.Y., for $200 million in June 1985. Metmor serviced $11.7 billion in mortgages at the end of June.

The mortgage banking business is actually two businesses. First, there is the origination business. A mortgage company originates first mortgages with its own or borrowed funds and then sells these loans to investors. The second business is servicing, which generally is the more lucrative. For a fee, the mortgage company will continue to service the mortgages it sells to investors.

Servicing includes the collection of payments in accordance with the terms of the loan and the operational procedures covering accounting, bookkeeping, insurance, tax records, loan payment follow-up, delinquency loan follow-up, and loan analysis.

"Diversified corporate nonfinancial firms, including what might be referred to as 'smokestack' America, will continue their love affair with mortgage bankers during the immediate future," according to Lawrence J. Trautman, a senior vice president and director of mortgage industry practice at Donaldson, Lufkin & Jenrette Inc., New York.

Mr. Trautman said that "financial services niches, such as mortgage banking, should remain uniquely attractive to corporate strategic planners in other industries, as they strive to discover businesses with profit potential."

He added: "Mortgage banks should be at the top of the list for financial service acquirers for many good reasons. The most important reason is the stability of cash flows available through the selective, partial sale of loan servicing, which is a major plus to a publicly traded company.

"The growing perception of the pivotal role of mortgage finance in the economy bodes well for a continued bull market in the market value of mortgage banking companies and loan servicing, as the acquisition demand remains strong for these companies." ■

Refinancing Wave to Continue, Predicts Mortgage Bankers' Departing Chief

By MARK BASCH

WHITE PLAINS, N.Y. — As residential mortgage originations soared to record levels in 1986, the main trade group of the mortgage banking industry found itself turning to a commercial real estate specialist for leadership.

"It's interesting that there was a commercial specialist president in the biggest residential year the industry ever had," said Ronald F. Poe, outgoing president of the Mortgage Bankers Association. "It's been an interesting and challenging year for me staying current with all the residential issues."

Last year, in what was considered a busy year for the mortgage banking industry, mortgage originations totaled about $240 billion nationally. This year, the total is expected to be about $400 billion. "No one could have ever possibly estimated the volume that has taken place this year," Mr. Poe said.

As president and chief executive officer of Dorman & Wilson Inc., a real estate investment finance firm that makes only commercial real estate loans, Mr. Poe has not experienced the residential mortgage crunch first hand. But that doesn't mean Dorman & Wilson has been sitting idly by. The firm, which operates in the New York-New Jersey-Connecticut area, will make about $1 billion in loans by yearend and have a servicing volume of about $3 billion, he said.

Ronald F. Poe

Dorman & Wilson believes it is the largest privately held commercial real estate firm in the country. It was once a subsidiary of European American Bancorp, but Mr. Poe, who joined the company in 1965, led a leveraged buyout of the firm in 1983.

He feels the strong volume of residential mortgages will continue into 1987, but the commercial real estate market will be hit hard by a combination of overbuilding and the new tax laws. "Nineteen eighty-seven is going to be an extremely difficult year for commercial real estate," he said. "Thus far, commercial values have stayed the same, because rents and interest rates have dropped in about the same proportion. Interest rates aren't going to drop any more, but rents are. We're going to see a number of major commercial projects default in 1987."

While the multifamily property market was hurt by the tax bill, the single-family residential mortgage business came out in good shape. "Housing has been treated very fairly and [the tax bill] should have no effect whatsoever on the volumes of people [getting loans] up to $200,000," Mr. Poe said. "The markets that will be effected by tax reform are the $200,000- to $400,000-markets. In those markets, purchasers seriously consider the after-tax costs of housing."

Purchasers who can afford homes of more than $400,000 don't worry about those costs, he said.

Mr. Poe expects interest rates to remain stable in 1987, with residential housing starts remaining about the same. "The wave of refinances will continue," he said. "It's estimated that there are still around four million loans outstanding with rates above 12%."

When the wave of refinancings began early in 1986, many mortgage lenders found themselves backed up with mortgage applications and lacking the manpower to handle all the business. "The way the industry has adjusted to that problem is to just orient itself so that time frames are longer," he said. "Instead of a 30- to 45-day time period, we've now moved to a 45- to 90-day time period.

"It's very difficult to expand the system because so much of the system can't be quickly expanded," he said, like the title and the appraisal processes.

Some old-line mortgage bankers have been slow to embrace new technology that would speed up the process, but the addition of large conglomerates like General Motors into the mortgage banking industry in recent years might push the industry ahead. Mr. Poe sees that as a positive sign.

"As General Motors Acceptance Corp. enters the mortgage business, it's clear that what they would like to do is bring a much higher level of electronically oriented productivity to a very complex business," he said. "I think that's good, because it's clear that over the past year we just haven't been able to keep up electronically with the volumes.

"The whole origination and closing process is just too complicated. It needs clearly to be brought into the 20th century," he said.

One innovation that hasn't caught on, he said, is the electronic mortgage network. These networks, developed within the past three years, were designed to give home buyers a listing of mortgage products from several lending institutions around the country.

"That's an idea whose time hasn't come for a number of reasons, not the

Servicing Volume Rises 13% at Top 100 Mortgage Companies

By L. MICHAEL CACACE

NEW YORK — The servicing volume of the top 100 mortgage companies increased 13% in the year ending June 30, according to an *American Banker* survey.

The top 100 mortgage companies were servicing $423.8 billion for investors on June 30, 1986, up from $375.1 billion serviced by the top 100 firms on June 30, 1985. The value of mortgages serviced by the top 100 increased 6.5% from $397.8 billion on Dec. 31, 1985.

The *American Banker* surveyed 400 mortgage companies, 150 commercial banks, and 60 thrifts to compile today's listings of the top 100 mortgage companies, the top 100 commercial banks in mortgage servicing, the top 50 thrifts in mortgage servicing, and the top 25 servicers among the combined groups.

The 10 Largest Gainers Among the Top 100 Mortgage Companies

Data for banks and mortgage companies were obtained directly from these institutions by the *American Banker*.

The thrift data were obtained from ADP Data Services Division, New York, from ADP's thrift data base. This data base is derived from Federal Home Loan Bank Board data.

Below are the more important statistical findings from the survey:

- GMAC Mortgage Co., Philadelphia, maintained its ranking as the top mortgage company in the field with $21.8 billion in mortgages serviced for investors on June 30, up 4.7% from its industry-leading volume of $20.4 billion on Dec. 31, 1985, and up 12.6% from $19.3 billion on June 30, 1985, when it ranked second.
- Lomas & Nettleton Financial Corp., Dallas, which had ranked as the top mortgage company for 17 consecutive years until it was surpassed by GMAC Mortgage at yearend 1985, again was second with $21.3 billion in servicing at midyear, up 5.2% from $20.2 billion a year earlier.
- Over the year ended June 30, Citicorp Homeowners Services Inc., St. Louis, moved up three places in rank to third position. Citicorp Homeowners was servicing $15 billion in mortgages for others on June 30, up 72% from $8.7 billion a year earlier, when it ranked sixth. According to one market analyst, Citicorp Homeowners — a Citicorp subsidiary — has been aggressively acquiring servicing.
- The fourth and fifth largest mortgage companies in the nation are now owned by insurance companies.

Fireman's Fund Mortgage Corp., Farmington Hills, Mich., a subsidiary of the Fireman's Fund Corp., ranked fourth, with $14.8 billion in servicing on June 30, up 3.9% from $14.2 billion a year earlier, when the company — then known as Manufacturers Hanover Mortgage Corp. — ranked third.

Metmor Financial Inc., Los Angeles, a subsidiary of Metropolitan Life Insurance Co. ranked fifth with $11.7 billion, up almost 20% from a year earlier when it ranked fourth.

- The ownership breakdown of the top 100 mortgage companies finds that 36 are owned by commercial banking firms, 25 by thrifts, 24 by other companies, and 15 are independent companies. At yearend 1985, 37 of the top 100 mortgage companies were commercial-bank-related, 27 were thrift-related, 19 were owned by other companies, and 17 were independent.

Currently, two mortgage companies ranked among the top 100 are in the process of being acquired.

Earlier this month, Merrill Lynch Realty Inc. announced it would sell the $3.2 billion servicing portfolio of its mortgage subsidiary, Merrill Lynch Mortgage Corp., Stamford, Conn. — the nation's 44th largest mortgage company — to GlenFed Mortgage Corp. for about $52 million. GlenFed Mortgage is a subsidiary of the $ 16.4 billion-asset Glendale Federal Savings & Loan Association, Calif., the nation's sixth largest thrift.

Glendale Federal ranked 16th among thrift institutions in servicing on March 31, 1986, with $2.7 billion. Since then, its servicing has grown to $3.5 billion, according to the thrift, and would jump to $6.7 billion with the Merrill acquisition. Had the acquisition occurred at midyear, Glendale Federal would have ranked 23d among the top 25 mortgage servicers among banks, thrifts, and mortgage companies combined.

Last month, Fleet Financial Corp., Providence, R.I. — the nation's fifth largest mortgage servicer, based on the combined servicing portfolio of $13.8 billion at Fleet National Bank and its two mortgage company subsidiaries, announced that it had agreed to purchase Security Pacific Mortgage Corp., Denver, a subsidiary of Security Pacific Corp., Los Angeles. Security Pacific Mortgage is the nation's 57th largest mortgage company, with $2.5 billion in mortgages serviced for others on

Source of Data is ADP, Data Services Division, New York, from their computer file of the Federal Home Loan Bank Board data base for FSLIC-insured institutions. The listing is based on permanent real estate mortgages serviced for others and excludes mortgages owned by the institution, as well as forward commitments, home improvement loans and all temporary financing, such as construction and development loans. Please note that several of the institutions listed here own mortgage companies which actually perform the servicing function. These mortgage companies are listed in today's listing of the Top 100 Mortgage Companies. (a)—Formerly known as First Federal Savings Bank of Phoenix.

For the first time, this listing has been expanded to include thrift institutions who service mortgages for others directly (and not through a mortgage company subsidiary). For firms with more than one subsidiary (mortgage company, thrift, or commercial bank) servicing mortgages for others, the combined servicing figure of these subsidiaries is used. The name of the parent company is shown in bold type. (a)—Data shown for both June 30 and Dec. 31 include Citicorp Savings of Illinois, Chicago. June 30 data were not available for Citicorp Savings, therefore March 31 data were used. Citicorp Savings' servicing portfolio totaled $1 billion on March 31 and Dec. 31, according to FHLBB data. (b)—Formerly Manufacturers Hanover Mortgage Corp, company was sold to Fireman's Fund Corp., Novato, Calif. on June 30. (c)—On June 1, 1986, Kissell Co., Springfield, No., was acquired by CityFed Financial Corp., parent of City Federal Savings & Loan Assn., Elizabeth, N.J. City Federal Savings' mortgage division—CityFed Mortgage Co.— was servicing approximately $7.1 billion for others on June 30. (d)—A subsidiary of Commonwealth Savings Association, Houston. Company changed name from Commonwealth Mortgage Corp. and now reports consolidated data which includes Commonwealth Western Mortgage Corp., Portland, Oregon (the former General Electric Mortgage Corp.). Prior to this year, both mortgage companies reported separately (†)— The 12/31/85 rank is for Commonwealth Savings Assn. The 12/31/85 mortgage servicing volume was the combined servicing volume for Commonwealth Mortgage Corp. and Commonwealth Western Mortgage Corp. (e)—Servicing is done by Sovran Mortgage Corp., Richmond and Sovran Bank/Maryland, Bethesda (formerly Suburban Bank). Dec. 1985 data for bank not available. (★)— Data are for March 31, from the thrift's report of condition submitted to the Federal Home Loan Bank Board. Source of these thrift data is ADPData Services Division, New York.

Congress . . .

Continued from Page 4

"Domestic and foreign confidence in the U.S. financial system was temporarily shaken," says Mr. Wirth.

• Farm credit. The Farm Credit System, the $60 billion cooperative lending network, has been strapped by declining land and commodity prices among its farmer-borrowers. It's also struggling with an unfortunate price disparity between its source of funds — bonds yielding about 13% interest — and prevailing farm loan income — fetching closer to 10% interest.

Congress in its final days voted authority to the Farm Credit System to write off current losses on this negative spread over 20 years.

The point, says H. Brent Beesley, president of the Farm Credit Corporation of America, which handles system financing, is to keep system lenders competitive with commercial bank lenders.

Better borrowers have been refinancing their older, 14% loans for 10% loans with nonsystem lenders, Mr. Beesley says. If the system wants to remain in business, it must keep those better borrowers.

What worries Farm Credit Administration chairman Frank Naylor, who regulates the industry, is that the writeoff may prove an accounting gimmick that fosters reckless lending.

Commercial bankers, such as those represented by the Independent Bankers Association of America, complain the accounting change gives another advantage to Farm Credit System lenders.

Farm lenders generally suffered another setback with passage of new bankruptcy protection for farmers. Known as Chapter 12 of the bankruptcy code, the new law gives farmers with as much as $1.5 million in debt 90 days to file a financial reorganization plan to be considered by a judge.

• South Africa sanctions. Impatient with the slow progress the white South African government has made in what it calls its reform efforts, Congress approved new sanctions on American business ties with the prosperous apartheid state.

For banks, the law forbids new loans to the South African government, or government-sponsored agencies and companies.

The Anti-Apartheid Act of 1986 also authorized minting of U.S. gold coins to compete against the Krugerrand. Sales are bustling.

• Credit unions. Congress took control of what is called the Community Development Credit Union Revolving Loan Fund from the Health and Human Services Department, which has been sitting on the money, and gave it to the National Credit Union Administration to administer. It is only $3 million, and is aimed at offering credit unions in low-income neighborhoods startup capital.

• Computer fraud. Washington wrote new safeguards for financial institution computer systems. The Electronic Communications Privacy Act protects a variety of new communications technologies from interception, including computer-to-computer transmissions such as home banking, and electronic mail.

• Tax reform. Probably the most important law for bankers, as well as the rest of America, the Tax Reform Act will affect banking in many as-yet unknown ways.

Gone is the investment tax credit, the chunk banks could subtract from their tax bill if they bought leasing equipment. Gone is the deduction for carrying most municipal revenue bonds. And with the alternative minimum tax, gone is the ability to load up on tax-free municipal bonds as a means of avoiding Uncle Sam.

For large healthy banks, gone is the tax reserve deduction for loan losses. Further, existing reserves must be reported as income over the next half-decade. Gone, too, is the unlimited use of foreign taxes on foreign loans as a means to reduce American taxes. ■

Top 100 Mortgage Firms Service $423.8 Billion

Continued from Page 7

June 30. If this acquisition had taken place prior to midyear, Fleet Financial Group would have ranked fourth among the nation's mortgage servicers with a total, combined portfolio of $16.3 billion.

• The top 100 commercial banks were servicing $27.2 billion in mortgages for investors on June 30, up 3% from $26.4 billion a year earlier.

• The top commercial bank in servicing is Bank of America, San Francisco, with $2.7 billion in servicing on June 30, down 11% from $3.03 billion in servicing on June 30, 1985.

• The top thrift institution in servicing is Commonwealth Savings Association, Houston, with $10.6 billion in servicing on March 31. Commonwealth's servicing is performed by its mortgage company subsidiary Commonwealth Mortgage Corporation of America, Houston, which ranked sixth among mortgage companies, based on its $11.4 billion portfolio on June 30.

The thrift mortgage servicing listing, which is derived from the Bank Board report-of-condition series, includes thrifts insured by the Federal Savings and Loan Insurance Corp. that service mortgages either directly themselves (within the thrift) or through a subsidiary mortgage company.

• The top thrift that performs servicing directly is American Savings & Loan Association, Stockton, Calif., with $10.1 billion on March 31.

The 10 Largest Losers Among the Top 100 Mortgage Companies

	(Dollar Amounts in Millions)	Servicing 6/30/86	Servicing 6/30/85	Percent Decrease	Mtge. Rank

• For the first time, the *American Banker* includes in its listing of the top 25 servicers among banks, mortgage companies, and thrifts those thrifts directly servicing mortgages for investors. Two such thrifts made this listing. American Savings ranked 11th, and Home Savings of America FA, Los Angeles, ranked 16th with $8.2 billion in servicing on March 31.

Early production schedules prevented the *American Banker* from correcting erroneous data appearing in today's listings. There are three such errors.

Two of the errors are in the table on page 26 entitled "Ownership of the Top 100 Mortgage Companies." Fifth-ranked Metmor Financial Inc., Los Angeles, is owned by Metropolitan Life Insurance Co., New York. And 48th-ranked Crocker Mortgage Co., San Diego, Calif., is owned by Wells Fargo & Co., San Francisco.

There is also an error in the table on page 28 entitled "Top 100 Banks in Servicing of Permanent Mortgages." Simmons First National Bank, Pine Bluff, Ark., which ranks fifth on the listing, submitted erroneous data that included its mortgage company subsidiary. The bank currently is in the process of revising its data. ■

Mergers . . .

Continued from Page 45

nated by five giant institutions."

Like other future-watchers, Mr. Friedman for some time has been attempting to predict the ways in which consolidation will occur in the banking industry. He says most studies he's been involved with envisioned a much more rapid process where states such as Texas would permit statewide branching rather than expansion through the formation of multibank holding companies.

Furthermore, "piecemeal geographic deregulation" and the sorry state of the farm and energy economies have contributed to a slowdown in expected mergers, according to Irving Leveson, senior vice president and director of research for the Hudson Strategy Group, a subsidiary of the Marsh & McLennan Companies Inc.

Still, he thinks a figure of 5,000 banks by the year 2000 is not out of the realm of reality: "The error in predicting will be because a larger number of small banks than expected survive, not because of a mistake in projecting what percentage of the business the largest 100 banks will have."

It is the beginnings of early concentration of assets among those larger institutions that Mr. Leveson says the *American Banker* survey may have picked up by finding that 20% of the public does business with a financial institution that has been merged or acquired.

He suggests that another possibility is that people may also have confused name changes with mergers. For the 12th straight year, banks have changed their names more frequently than other kinds of companies, according to a recent study by Anspach, Grossman Portugal Inc., communications consultants.

Additionally, the fact that people generally use multiple suppliers of financial services increases the chance that more of them would have experienced an amalgamation over the course of several years. ■

Mortgage Bankers

Continued from Page 2

least of which is that all they really are are pricing bulletin boards," Mr. Poe said. "The mortgage origination process as well as the consumer origination process involves a heck of a lot more than price."

The process involves personal service, and because of that, Mr. Poe feels there will always be a place for the smaller mortgage banking companies, even as giants like GMAC Mortgage Co. move in. Since the smaller firms will have a place in the industry, he doesn't see a large consolidation. "Clearly, the industry is consolidating at the servicing and marketing level but growing, fragmentizing, and almost turning into a boutique industry at the origination side," he said.

"I'm convinced that as long as the mortgage transaction is for most people the largest and most significant financial transaction they'll ever get involved in, that they really need someone to talk to them on an individual basis.

"I'm hard-pressed to see the origination function consolidated," he said.

How Wells Fargo Absorbed Crocker, Kept Its Customers

By LAURA GROSS

NEW YORK — How do you handle a merger so consumers don't get turned off?

Some bankers point to Wells Fargo Bank's acquisition of Crocker National Bank, both in San Francisco, as a good case study.

They say that Wells acted properly in the merger by minimizing employee panic and handling customer confusion before it began.

Employee turnover at acquired institutions usually booms. At Crocker it declined dramatically, from 25% right before the merger was announced, to 5%, according to Lona Jupiter, a Wells Fargo senior vice president.

Part of the reason, says Stephen A. Enna, a Wells senior vice president and personnel director, is that "we spent a lot of time making sure people were treated fairly. From a human resources perspective, it's great to do lots of nice things for people, but the reason we did it is that it made good business sense.

"To the extent you can inform employees of their status and the policies and programs that effect them, you'll minimize disruption in the workplace. That disruption is important because it can, and oftentimes does, lead to customer dissatisfaction," Mr. Enna adds.

The first thing Wells did was solicit the help of Crocker's human resources staff so that, within a week of the announcement, they could issue a special edition of Wells' employee handbook for Crocker workers that spelled out the benefits they'd have as Wells Fargo employees. For those whose jobs were to be eliminated, Mr. Enna says, a minimum of 30 days' advance notice was given and letters were sent explaining the amount of separation pay, where to attend job search workshops, and other issues of interest.

For these people, the goal was "that they feel treated in an equitable fashion," Mr. Enna says. And for employees who stayed, there was a 24-hour hotline to call if they felt concerned or anxious, he says.

Also important was clear, strong, and immediate communication with consumers. Wells interviewed Crocker's customers to see what their concerns were. Ms. Jupiter says the principal concerns were, "Will my branch close and do I have to order new checks."

A letter went out to every Crocker customer explaining that they didn't have to order new checks and giving a phone number to call for further questions. The phone was staffed for six weeks. After the crush of calls during the first two weeks, they dribbled off to just a few.

"We coped with their initial anxiety and nervousness and convinced people to give us a chance. They may have been even more forgiving than they normally would have been because of that," Ms. Jupiter says. ■

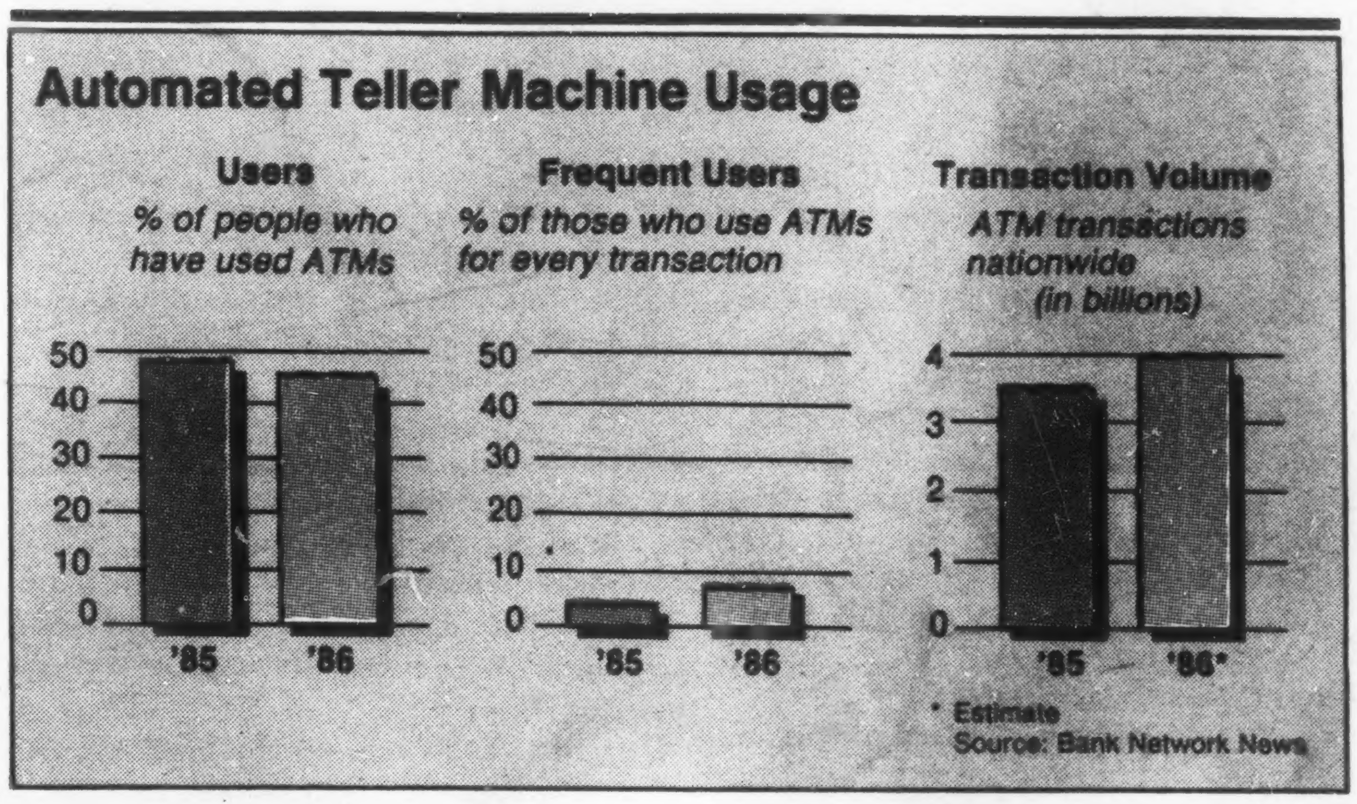
Customer Lines Not Getting Longer at ATMs

But Consumer Survey Finds More Heavy Users

By MICHAEL WEINSTEIN

NEW YORK — The number of people using automated teller machines in 1986 has remained virtually flat compared with a year ago, according to a survey commissioned by the *American Banker.*

However, the number of heavy users — those who say they use banking machines for every transaction — has doubled, and some bankers think that repeated use by ATM addicts is a major reason that more transactions are flowing through the nation's teller machines.



* Estimate
Source: Bank Network News

Even though transaction volume is up, industry observers say that at least some of the machines are not cost-effective. And bankers are divided over the importance of attracting new users quickly to ATM technology.

The newspaper's third annual survey, "How Consumer America Views the Changing Financial Services Industry," gauged attitudes on a range of issues in the financial services industry.

Washington Leaders Say Banks' Lobbying Is in Disarray

By ROBERT TRIGAUX

SAN FRANCISCO — Industry squabbling over the direction of banking and financial services has left Congress confused and unlikely to act soon to advance financial deregulation without clearer goals, Washington officials told the annual gathering of the nation's commercial bankers.

At the American Bankers Association convention here, Comptroller of the Currency Robert L. Clarke said that industry apathy and dissension are undermining commercial banking's message to the federal government.

"The ABA's advocacy on your part has been, and continues to be, weakened by lack of commitment — disinterest — and even outright opposition among some of its members," Mr. Clarke said in remarks prepared for delivery on Monday.

"Your place — and the place of the American banking structure — in the new financial world that's coming together will, in large part, be determined by whether and how soon the changes the ABA seeks on the part of bankers are made. Without your commitment, your interest, and your support, those changes may never come," Mr. Clarke said.

Robert Clarke

"You can keep America's banking structure entangled in a legal and regulatory web that practically assures your industry's decline."

Separately on Monday, ABA's outgoing president, Donald Senterfitt, said that the banking industry has been

Chemical's TV Show, Brochure On Taxes Spark Wide Interest

Chemical Bank says a television show it produced on tax reform brought a wave of requests from consumers for information on the timely topic.

The New York bank received more than 12,000 requests for its *Financial Fitness Bulletin* on tax reform from persons who called a toll-free number given on the TV program, the "Chemical Bank Tax-Reform Special," which aired Sept. 28 on WNYW, a local New York station.

The six-page bulletin is a joint project of Chemical and the accounting firm Price Waterhouse & Co. It contains information on how the recently enacted tax reform bill will affect consumers in the areas of investments, deductions, and itemizations. It includes worksheets to help consumers compare the taxes they they will pay in 1986, 1987, and 1988.

Chemical also is giving out the pamphlets at its 250 offices in the metropolitan area. Messages on the bank's ATMs tell customers the bulletin is available. So does the bank's newsletter, *Chemical Matters,* which it mails out to credit card customers.

The Monitor

In addition to the brochure, the bank is showing a video of the television show in 70 branches.

Many banks have responded to consumer concerns over tax reform by publishing similar bulletins. Some have used the opportunity to make a sales pitch for new products that may be lucrative in the new tax environment.

For instance, home equity lines of credit are being plugged as an alternative to credit card loans whose interest, traditionally, consumers have deducted from their taxable income. The new law phases out deduction of credit card and consumer loan interest over a four-year period.

FINANCIAL FITNE$S

TAX REFORM

The Tax Reform Act will affect individuals in three key ways:

CHEMICALBANK

Ken Herz, Chemical's vice president of corporate communications, says the bulletin was produced in the spirit of community service. It refrains from plugging Chemical products, he says.

"New Yorkers are skeptical," he adds. "We wouldn't get away with it to be self-serving."

The bank logo does not appear in the bulletin, except for the front and back pages.

The television show, however, featured Chemical Bank president Robert I. Lipp advising consumers to keep their individual retirement account investments despite restrictions in the new tax law.

"IRAs will still be available to 80% of the public," he said. For 1986, all taxpayers still can make an IRA contribution. About one-third of the nation's taxpayers still will qualify for the same IRA benefits as in the past when the law takes effect in 1987, he added.

Mr. Lipp also said that tax reform, although it would eliminate the deductibility of credit card interest, merely would provide banks with an alternate source of income in equity products with credit attachments. It also would steer consumers toward those products because it would be a cheaper way to borrow.

"Using credit cards as a means to borrow large sums of money will be expensive," he said. "Home equity is the answer."

Editor Raps Washington's 'Hypocrisy'

Dr. Susan Lee, senior editor of *Forbes* magazine and another panelist on the television show, objected to the idea that Washington, rather hypocritically, should control the spending and borrowing habits of Americans.

"The government is saying do as I say and not as I do. They've sent us into enormous debt, and at the same time they're saying to us, 'We're going to make up for that debt by not letting you get into debt,' " Ms. Lee said.

Others who spoke on the show included Sen. Daniel P. Moynihan, D-N.Y.; Dr. Alan Greenspan, economist; and Bob Shapiro, a partner with Price Waterhouse.

Most of the panelists agreed that tax-reform legislation, despite some flaws, was in the best interest of the country.

"So many special interests had gotten a piece of the tax code that people said, 'You'll never be able to overcome that resistance,' " said Sen. Moynihan. However, he added, "the more they said that," the more Congress said, "We've got to pass it."

Mr. Shapiro, the former chief of staff on the Congressional Joint Committee on Taxation, said that despite the loss of interest deductions on credit cards, consumer loans, and the limited allowance for individual retirement accounts and deductibility of mortgage interest, the new tax code is "a fairer system than we have now."

He added that about six million to seven million "working poor" would be taken off the tax rolls.

"For increasing numbers of Americans," Sen. Moynihan said, "the more money made the less is paid in taxes. In this law, the striking thing is that about half of the people making over $100,000 will get a very sharp tax increase because they haven't been paying taxes at all."

Chemical said the show, which the spent about $200,000 to produce, was seen by about 241,000 people, according to the ratings service Arbitron Ratings Co., New York.

Rising Number of Banks Offer Mutual Funds to Customers

By PHILIP T. SUDO

NEW YORK — A new survey has found that a rising number of banks are offering mutual funds to their customers.

The study, produced by Alliance Capital Management Corp., a New York-based mutual fund firm, surveyed the marketing directors of 130 banks with $1 billion or more in assets. It was the second year in a row the firm conducted the survey, and the results showed:

- Sixty-eight percent of the respondents said they offered mutual funds, compared with 46% last year. An additional 14% said they were planning to offer funds, compared with 29% last year. Eighteen percent of the respondents said they had no plans to offer mutual funds, down from 25% in 1985.
- Fifty-five percent of the respondents classified mutual funds as a profitable product in 1986. Seventeen percent said the product was not profitable, and 16% said they did not know. Of those who said the product was not currently profitable, 45% said they expected it to be, 7% said they did not expect it to be, and 24% did not know.
- Eighty-nine percent offer mutual funds for general investment, compared with 39% last year, and 11% make them available for individual retirement accounts only, compared with 61% in 1985.

As competition among financial services firms has intensified in recent years, mutual funds have become an increasingly important product for banks, primarily for defensive reasons. Brokerage houses and mutual fund management companies have lured many traditional bank customers away to funds by capitalizing on a strong stock market and declining interest rates.

Many of those customers, having become accustomed to double-digit returns from their certificates of deposit, were lured away to mutual funds — particularly government securities funds — through the individual retirement account. The mutual fund industry specifically targeted bank customers for their IRAs, using aggressive sales and promotions tactics, with the idea that once bank customers made the small investment in a fund, the company could lure a larger share of their assets into other funds.

Banks are prohibited by law from selling, underwriting, or sponsoring mutual funds, but they may "make them available" to their customers. As the Alliance Capital study indicates, many banks have begun to do so, entering joint venture agreements with outside mutual fund management companies in the belief that the customer will continue to view a bank as his or her primary financial institution, if it is the bank that introduces the customer to new products.

Any assets that a bank customer invests in mutual funds through a bank go directly to the fund sponsor; the bank

"CREDIT CARDS:
THE NEW STRUGGLE FOR MARKET SHARE"
A New Research Study by SMR Research Corporation

Amazing as it may seem, every general purpose credit card in consumers' hands today may be replaced by another card from another issuer within the next five years. The greatest battle for market share in the history of the credit card business has begun.

This is the prime conclusion of an electrifying new research study of more than 200 pages from SMR, the leader in published financial services studies.

Affinity cards, shopping mall cards, discount-priced "no-frills" cards, and cards from new industry entrants all are converging at once, causing the shakeup. The new entrants include Discover, but others as well, including American Express, which is moving into revolving card credit.

Based on six months of painstaking research and more than 100 interviews, this study provides both revelations and analysis. It includes 38 pages on the success of affinity cards and their bullish future; discoveries about big expansions coming soon in mall cards, and important new information about Amex, Sears, Shell, no-frills vs. enhancements marketing, and the overall maturation of the credit card product.

For a free Prospectus about this important new study, call or write: Mark S. Kamm, SMR Research Corporation, 382 Route 46, Budd Lake, NJ 07828. (201) 691-1255.

come allocated to the holder thereof may not be offset by any net operating losses, regardless of who holds the interest.

The conferees intend that the regulations would take into account the value of the residual interest in relation to the regular interests, and that the regulations would not apply in cases where the value of the residual interest is at least 2% of the combined value of the regular and residual interests.

[The conferees intend that these regulations may apply in appropriate cases to residual interests issues before regulations are issued.]

The conference agreement provides that the partnership information return filed by the REMIC is to supply information relating to the daily accruals of the REMIC.

Treatment of foreign residual holders:

The conference agreement provides that in the case of a holder of a residual interest of a REMIC who is a nonresident alien individual or foreign corporation, then for purposes of sections 871(a), 881, 1441, and 1442, amounts includible in the gross income of such holder with respect to the residual interest are taken into account only when paid or otherwise distributed (or when the interest is disposed of).

[The conferees intend that withholding upon disposition of such interests is to be similar to withholding upon disposition of debt instruments that have original issue discount.]

The conference agreement also provides that under regulations, the amounts includible may be taken into account earlier than otherwise provided where necessary to prevent avoidance of tax. The conferees intend that this regulatory authority may be exercised where the residual interest in the REMIC does not have significant value (as described above).

Residual interests received in exchange for property:

In the case of a residual interest that is received in exchange for property, any excess of the issue price of the residual interest over the basis of the interest in the hands of the transferor of the property immediately after the transfer, is amortized and is included in the residual holder's income on a straight line basis over the expected life of the REMIC.

Similarly, any excess of the transferor's basis in the residual interest over

earns only a small servicing fee. Some fund companies have complained that banks are reluctant to bring attention to the mutual funds they make available, as it only encourages disintermediation.

In fact, the Alliance Capital study found that 17% of the respondents who offer mutual funds do nothing to inform their customers that the funds are available. Of those who do inform their customers, direct mail is the most popular method (43%). Thirty-one percent use branch offices, 28% advertising, and 13% bank personnel. Multiple responses were permitted.

Alliance Capital, which offers a group of mutual funds exclusively through banks, markets the funds through the Pershing division of Donaldson, Lufkin & Jenrette Securities Corp. Both Alliance Capital and Donaldson Lufkin are subsidiaries of Equitable Life Assurance Society of the United States.

The study estimated that between April 1985 and March 1986, customers of the top 300 banks invested more than $2 billion in the mutual funds that their banks made available (excluding money market mutual funds). According to the Investment Company Institute, a Washington D.C.-based mutual fund trade group, total mutual fund sales in that period exceeded $115.4 billion. Thus, mutual fund sales through banks totaled less than 2% of the total sales for the period.

Among the survey's other findings: 57% of the respondents make load funds available, compared with 31% last year. The percentage of banks offering no-load funds dropped to 40%, from 46% in 1985. Among those planning to make funds available, 39% said they will offer a combination of load and no-load funds, while 33% will introduce no-load funds only.

A majority (63%) of the respondents make their funds available through their discount brokerage operations, followed by the investment area (23%), the self-directed IRA (18%), the trust department (9%), and the retail department (7%). ■

QUALITY BANKING THROUGH QUALITY TECHNOLOGY.

Today, technology drives the financial industry.

If you don't have the technology to be competitive or if you don't want the development of it to damage your bottom line, Mellon Bank's Datacenter can help.

You see, we've been an innovator in that business for the last 25 years. We have built a reputation of leadership in ATM and point-of-sale networking, cash management, data processing and information management.

Through our Datacenter, we can put our experience to work for your financial institution. Then, *you* can deliver quality competitive products to your customers and in the process reduce your non-interest expense.

That's exactly what we've been providing to more than 300 financial institutions nationwide. We must be doing a good job. Our customer retention rate is better than 97 percent.

We'd like to talk to you about what Datacenter can do for your institution. Call Clint Ferguson, Vice President, at 412-234-1681. Or write to him at Mellon Bank, Datacenter, One Mellon Bank Center, Pittsburgh, PA 15258-0001.

Major Firms Mull Over Idea Of Dropping Bank Charters

May Consider Change if Powers Aren't Expanded

By ANDREW ALBERT
and ROBERT M. GARSSON

Major U.S. banks have been talking louder lately about the possibility of dropping their bank charters in order to win the same freedom that their nonbanking rivals have.

On Monday, Chase Manhattan Corp. president Thomas G. Labrecque said his company would consider giving up its bank charter if Congress did not allow banks to engage in certain corporate finance activities, such as underwriting corporate securities. Such businesses are currently off limits to commercial banks under the Glass-Steagall Act of 1933, which separates commercial banking from investment banking.

Though such a step would be considered drastic, Chase isn't the only banking institution pondering the idea. Wholesale banks competing for Wall Street's corporate finance business believe they are most restricted by their

Sources See Pinola Still in Pursuit Of BankAmerica if Offer Is Rejected

By ROBERT LUKE
and MICHAEL A. ROBINSON

SAN FRANCISCO — First Interstate Bancorp chairman Joseph J. Pinola will continue to pursue a merger with BankAmerica Corp. even if his current $2.78 billion offer is rejected by BankAmerica's board.

That's the assessment of sources close to BankAmerica and First Interstate, one of whom said Mr. Pinola is "torn" over whether to sweeten the offer soon or wait and see if BankAmerica's fortunes decline further.

Sources close to BankAmerica added that the troubled banking giant has only the next six to nine months to prove it is on the road to recovery or it will have a difficult time justifying its independence.

"Anyone who thinks he is just going to go away doesn't know Joe Pinola," said one official close to BankAmerica who has known Mr. Pinola for years. "He is a very determined individual. He goes after what he wants, and he really believes in his own heart that this would be a marriage made in heaven."

A formal rejection of the First Interstate offer could come as early as Monday, when BankAmerica's board of directors meets in Los Angeles.

First Interstate made its proposal, one it values at $18 a share, on Oct. 6. According to sources close to BankAmerica, Mr. Pinola's bid suffered a setback when BankAmerica's chief executive, Samuel H. Armacost, was forced to resign a

Rules in Offing For Loan Sales, Regulators Say

Securitization of Assets Raises Question of Risk

By ROBERT TRIGAUX
and NINA EASTON

Top banking regulators say they are working on new guidelines to govern the growing practice by banks of selling off loan assets.

The guidelines are needed to determine to what extent a bank has actually sold its loans and removed the assets from its balance sheet, said Robert L. Clarke, comptroller of the currency.

There is an "urgent" need for the loan-sale guidelines because of the increasing securitization of assets, said L. William Seidman, chairman of the Federal Deposit Insurance Corp.

"Where is the ultimate credit risk? It's getting harder to determine that," Mr. Seidman said in an interview in San Francisco Monday, where he and Mr. Clarke were attending the annual convention of the American Bankers Association.

A common agreement on the regulatory treatment of loan sales is expected soon by the Comptroller, the FDIC, and the Federal Reserve Board, though Mr. Seidman said he "doubted" the industry would see a final policy before the end of the year.

Banks sell loans frequently to reduce their assets, which in turn reduces their capital requirements. Increasingly, too, banks are securitizing their assets — that is, selling securities backed by pools of assets — to improve their

US Banks Abroad:
The Pacific Rim

U.S. banks are finding their forays into the Pacific Rim quite successful, primarily because the banks possess what many developing countries need: money.

Countries in the Pacific Rim — Australia and the Far East — recently started allowing foreign banks to expand more easily, and U.S. banks have taken advantage of the opportunity. For example, in 1984, the largest U.S. bank holding companies had 108 offices in Australia. In two years, that number grew by more than 10%, to 121 offices. The numbers for other countries are even more impressive.

Because many countries in this region are in the early phases of industrialization, foreign funds are vital. South Korea is one example. It is the fourth-largest borrower of foreign funds in the world, and to maintain its rapid growth — about 10% per year — it needs borrowed money. But Korea's growth might not necessarily translate into growth for U.S. banks. The government there has ordered a cutback in foreign borrowing.

This edition focuses on Korea, which has the highest external debt in Asia. It examines the country's economy and how it affects U.S. banks there. Saehan Merchant Banking Corp., a multinational institution in Korea, with assets of more than $325 million, also is examined, as is Citicorp's attempt to expand its credit card market in Korea.

US Banks Unfold In Large Region

Survey reveals expansion of the top 25 US bank holding companies.

By Orest Mandzy

CITICORP, the largest bank holding company in the nation, has the largest representation in the Pacific Rim, which encompasses the Far East and Australia, according to an *American Banker* survey of the 25-largest bank holding companies.

The survey's ranking of the 25-largest U.S. bank holding companies was determined by the size of the banks' assets as of December 1985.

San Francisco-based BankAmerica Corp., the nation's second-largest bank holding company, reports 46 Pacific Rim offices. Chase Manhattan Corp. and Manufacturers Hanover Corp., both based in New York, are the third- and fourth-largest bank holding companies and have 44 and 26 offices, respectively.

The last such survey, which determined operations for U.S. banking companies throughout the world, was conducted in October 1984. The Pacific Rim was chosen as the focus of this year's survey because of recent regulatory changes in such countries as Australia, Taiwan, and the Philippines. The changes have made these markets dynamic and highly volatile.

The top 25 bank holding companies were chosen to be surveyed because they comprised the bulk — 90% — of U.S. banks with a presence in this region in 1984. A holding company must own at least 50% of an office to report it as part of the company's operations.

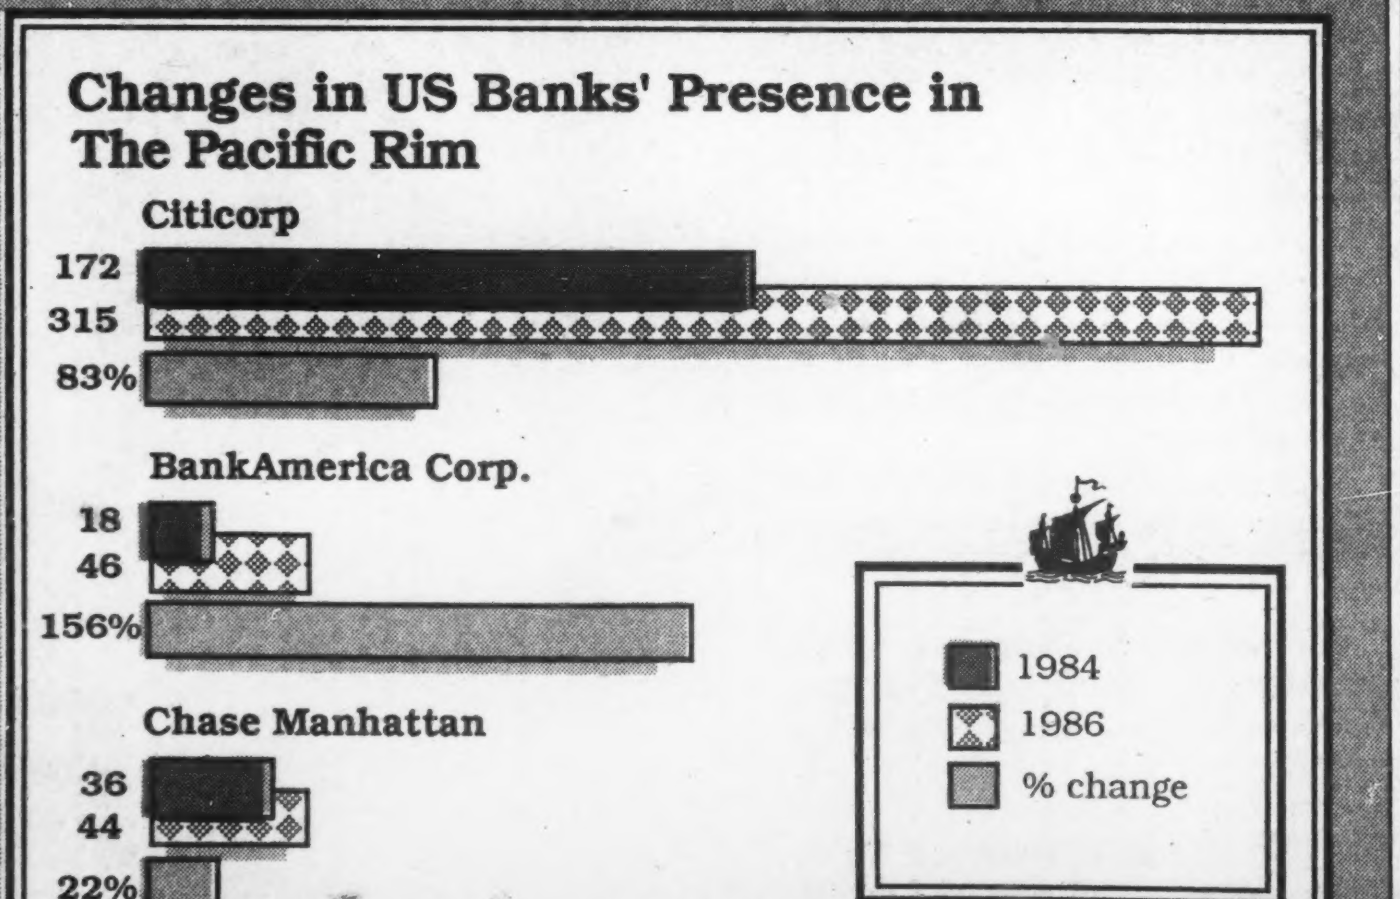
Two years ago, these banking institutions had a total of 431 offices in this region; this year they are reporting 619 offices, an increase of 44%.

BankAmerica is reporting the largest increase — up from 18 offices in 1984 to 46 today, or an increase of 156%. This growth is partially due to the tripling of the bank's offices in Hong Kong — from three in 1984 to 12 now.

Citicorp is posting an 83% increase, reflecting expansion from 172 offices to 315 offices. The Philippines witnessed the greatest expansion of Citicorp offices in the two-year period. According to the 1984 survey, Citicorp had four offices; it now has 62 offices, representing an increase of 1,425%. (A spokesman for Citicorp said the 1984 figure may not have included all of the bank's offices.)

Continued on Next Page

Changes in US Banks' Presence in The Pacific Rim



Contents:

13 US Banks Profit in South Korea
15 Diners Club Targets Koreans
18 Korean Merchant Bank Flourishes

Continued from Previous Page

No other bank holding company is reporting a significant increase in operations in the Philippines.

Australia, which had 73 Citicorp offices in 1984, now has 101 offices. This 38% increase is due to the lifting of a ban on new bank licenses and the easing of strict exchange controls by the government in February 1985.

Following relaxation of the rules, Citibank and Chase Manhattan opted to enter the market in full force.

Chase Manhattan's Australian presence has not increased significantly, but the bank started a partnership with Australian Mutual Provident Society (AMP), the country's largest insurance institution. The two opened the Chase AMP Bank Ltd., with branches in Melbourne and Sydney, in September 1985.

And Chase Manhattan and Citibank, Citicorp's wholly owned subsidiary in Australia, have undertaken efforts to link their electronic banking services with the automated teller machine networks of various Australian banks and thrifts.

Citicorp hopes to open 35 Australian branches during the next five years. But, according to a Citicorp spokesman, there has been "some change in our strategy," although he says Citicorp will continue to increase the size of its Australian operations, the bank's delivery systems will likely be changed.

BankAmerica's Bank of America, through its joint partnership with retailer Coles-Myer, also expects to increase its Australian operations. This venture is expected to give Bank of America a strong presence in retailing centers throughout Australia.

Citicorp is the only surveyed bank holding company reporting a significant increase in the number of offices it has in Japan. Over the two-year period, the bank had an increase of 182%, including expansion from 22 offices to 62 offices.

Significant increases in the number of banking offices also occurred in Hong Kong, where total U.S. banking presence rose 13%, from 123 offices to 139.

Citicorp had a 17% increase there, expanding from 47 offices in 1984 to 55 this year. Security Pacific Corp. in Los Angeles, the country's seventh-largest bank holding company, increased its number of offices in Hong Kong from four in 1984 to 21 now, or an increase of 425%.

Perhaps the countries with the most promise for U.S. banks are Taiwan and South Korea, which are trying to liberalize their banking systems.

The heightened presence of U.S. banks in these two countries is significant in terms of percentage, but not number of offices. Citicorp, for instance, had one office in Taiwan and two in Korea in 1984. This year it has six in Taiwan and four in Korea, representing increases of 600% and 100%, respectively.

U.S. banks are rebounding from countless Taiwanese bankruptcies that have led to about $600 million in bad loans. The banks expect to grow at an estimated rate of 7% in 1987, due to the rise in the value of the Japanese yen, the increased demand for exports, and lower oil prices.

The bad Taiwanese loans have led many U.S. banks to emphasize their fee-based business, as opposed to lending. The banks are reportedly concentrating on trade financing and foreign exchange dealings.

Taiwan's financial authorities have begun to loosen restrictions on foreign banking operations; they already allow consumer lending. It is rumored that foreign banks will be allowed to take deposits for periods of up to three years, as opposed to the current limit of six months.

The government of Taiwan also is expected to allow foreign bankers to open branches in places other than Taipei and to allow foreign banks to engage in foreign-exchange and trade-finance services in certain regions.

The anticipated changes promise some growth in the size of U.S. banks' operations in this country, but much depends on the conservative banking officials' opposition to deregulation of the industry.

The presence of U.S. banks in Korea is not substantial, but in 1985 the banks showed a total of $46 million in profits from their 16 offices there. This was due, in part, to low oil prices, low interest rates, and the low value of the won, Korea's currency.

Orest Mandzy is a member of American Banker's features department.

Survey Terms

In conducting the survey of U.S. banking activities in the Pacific Rim, which encompasses Australia and the Far East, *American Banker* used certain guidelines in defining different types of offices.

Branch is any office with complete banking facilities away from the head office.

Commercial bank subsidiary is a banking corporation that accepts deposits, makes short-term loans to business enterprises, and is at least 50% owned by the parent.

Merchant bank subsidiary is a bank that does not lend out its own funds but specializes in providing various financial services, such as accepting bills arising from trade, underwriting new issues, and providing advice on acquisitions, mergers, foreign exchange, portfolio management, etc.

Finance company is a company that specializes in the purchase of installment contracts from merchants who sell merchandise on the installment plan.

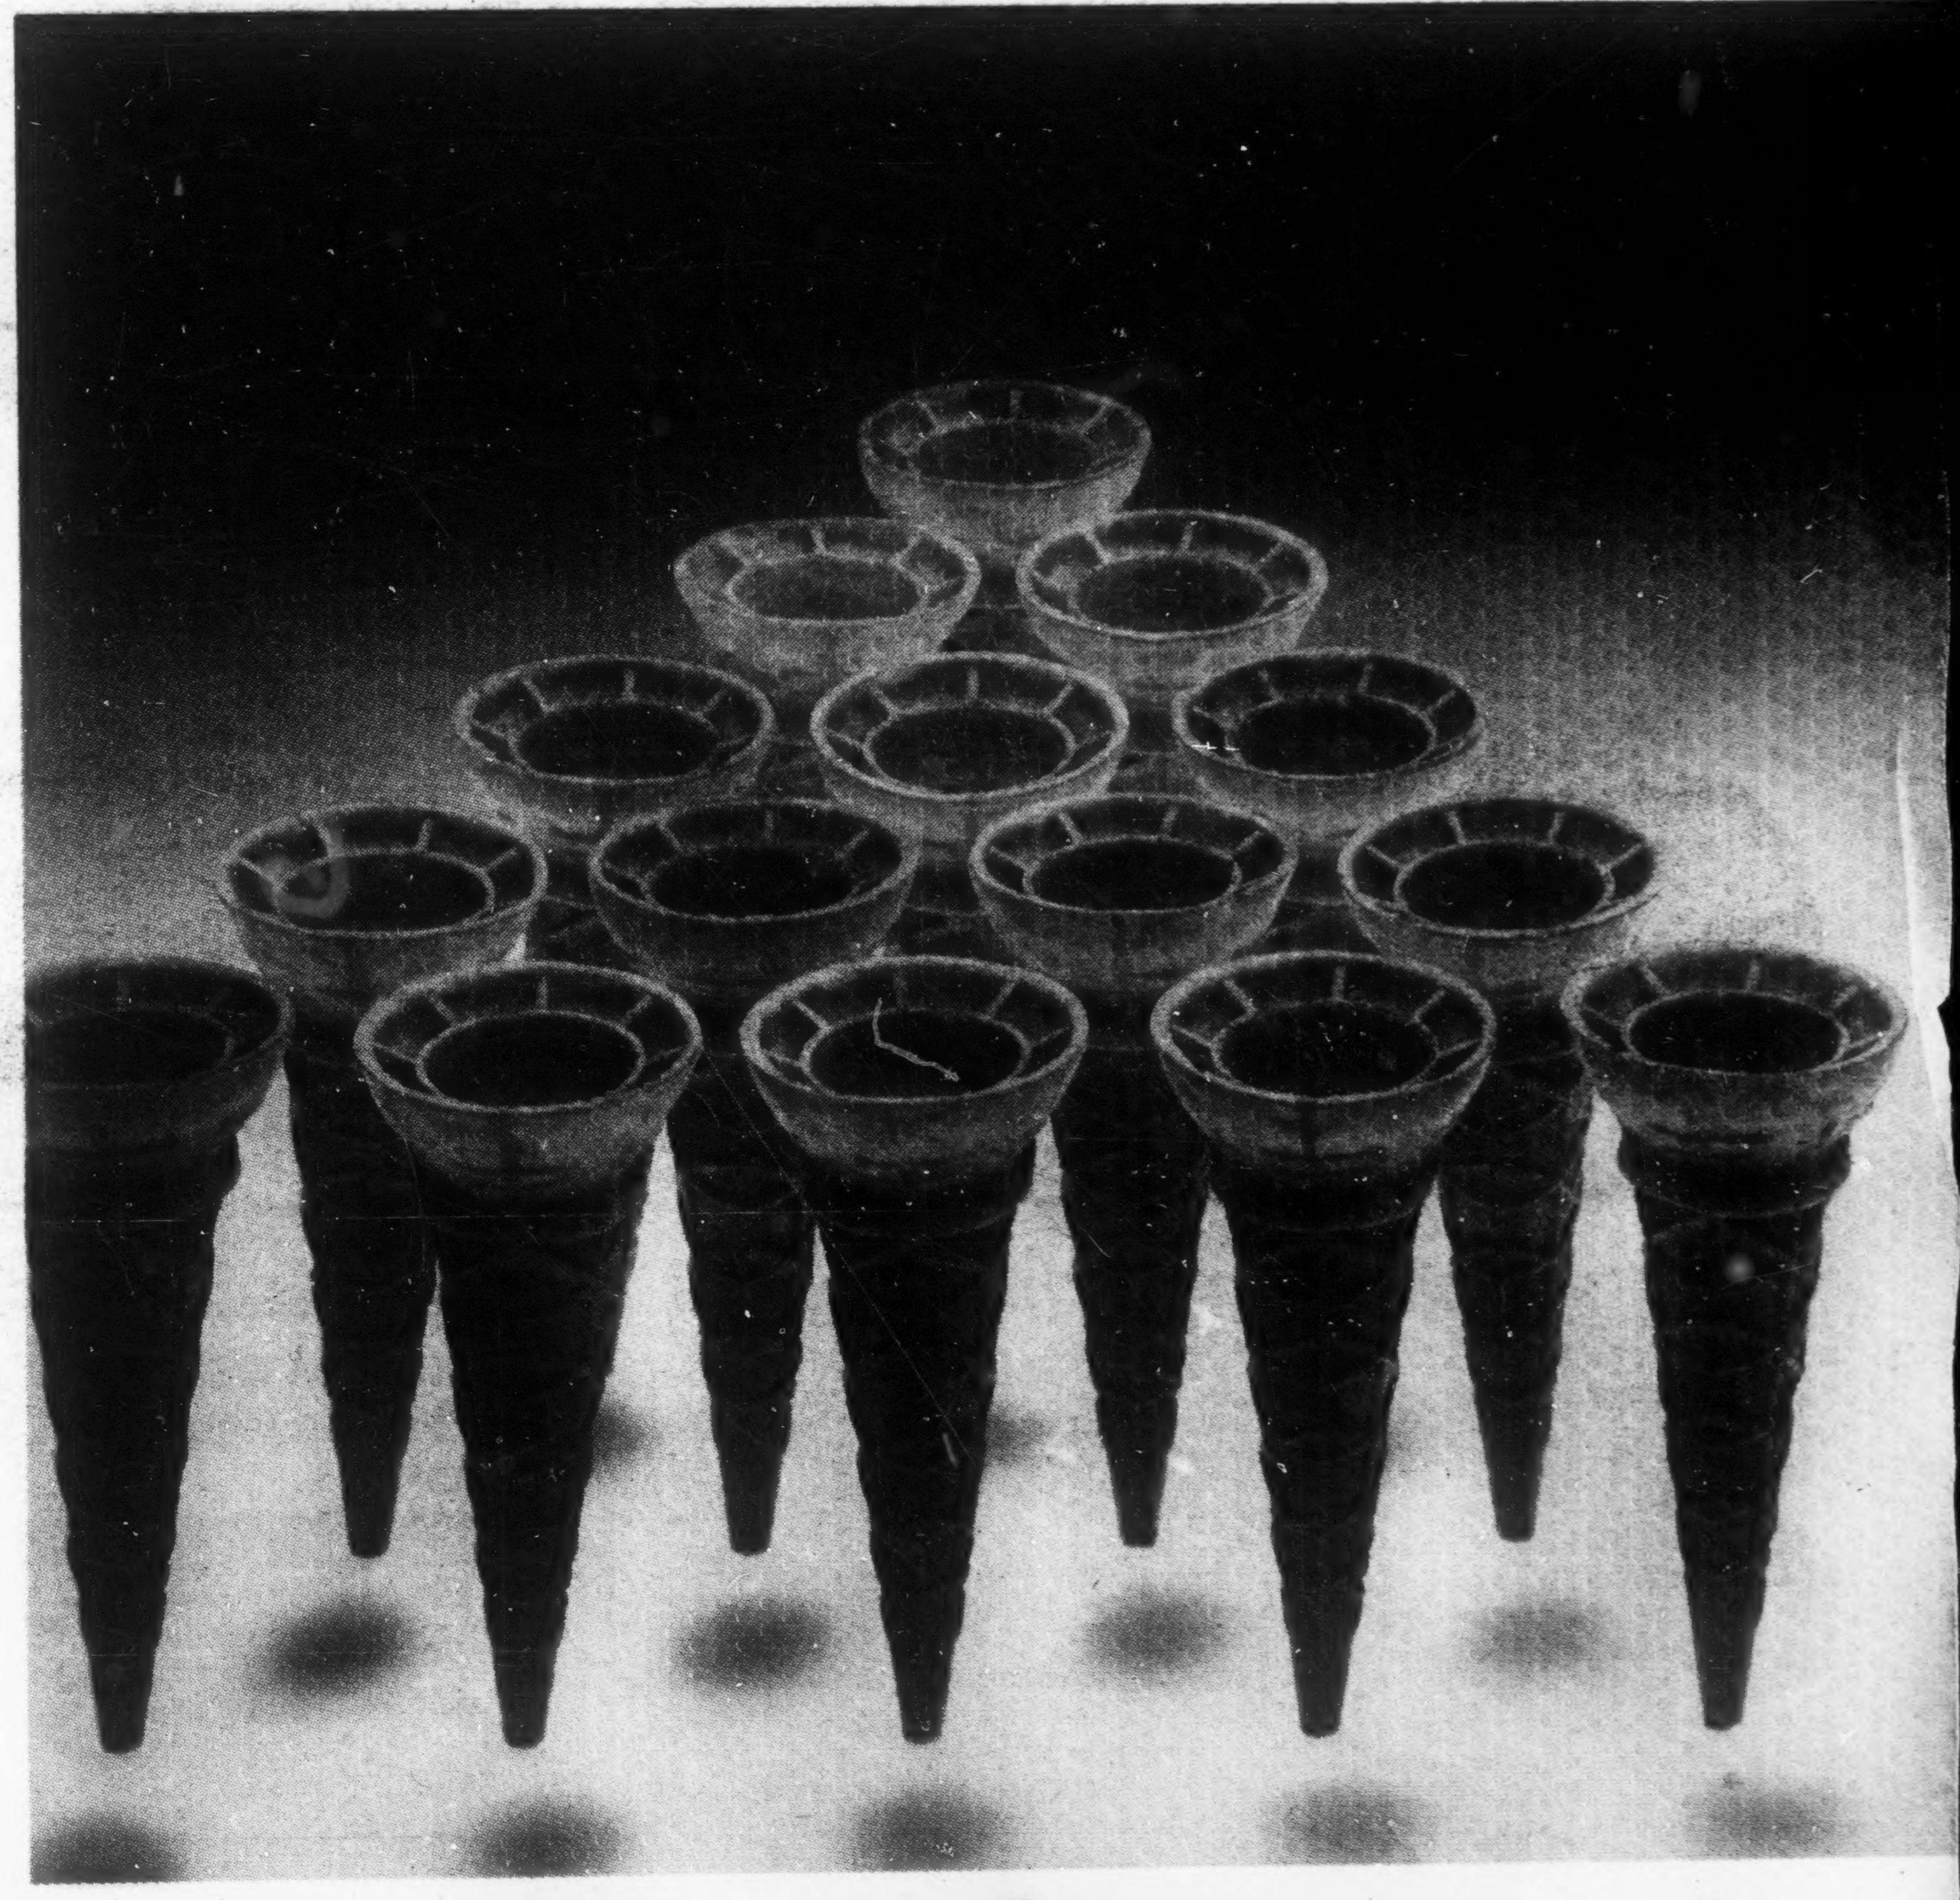
Leasing company is an asset-based lending firm in which the lender owns the physical asset to be financed. Generally, long-term fixed assets are financed by companies through leasing.

Investment company is a firm that engages in the origination, underwriting, and distribution of new issues.

Representative office is an office that does not conduct usual banking business but funnels clients to the parent.

Other is a catchall category that includes such companies as pension, management, and limited trusts; consumer financing companies; service corporations; currency units; and bank-card centers.

In conducting the survey, *American Banker* was faced with categorizing bank holding companies that have highly diversified Pacific Rim activities, as well as diversified definitions of Pacific Rim activities. Therefore, there may be discrepancies between what was reported and what is actually operated by the companies. Also, several companies' responses were different from what was reported in annual reports or 10-K forms. ■



Franchising give

Not long ago, few people considered the idea of bank franchising to be a sweet deal.

But today, a franchise from First Interstate is proving itself as a way for banks to meet growing competition from larger banks and other financial institutions. And the advantages of joining the nation's largest retail banking system look better and more numerous than ever.

Franchising: Best of both worlds.

As a First Interstate System franchisee, you continue operating under the same management and ownership. You share a recognizable, highly respected name–one associated with nearly $50 billion in assets and over 1,000 full-service banking offices–while retaining your independence.

Specifically, you gain opportunities to expand, diversify, and take advantage of sophisticated services that would otherwise be too costly. You can benefit from advanced data processing services, mortgage banking, discount brokerage, international trading, and much more. To your customers, you become a bank that's local but far-reaching, friendly but strong, conservative but innovative.

Franchising: The proven alternative.

We laid the foundation for

U.S. BANKS ABROAD

Making Gains In South Korea

While reviving the country's economy, US banks turn profits.

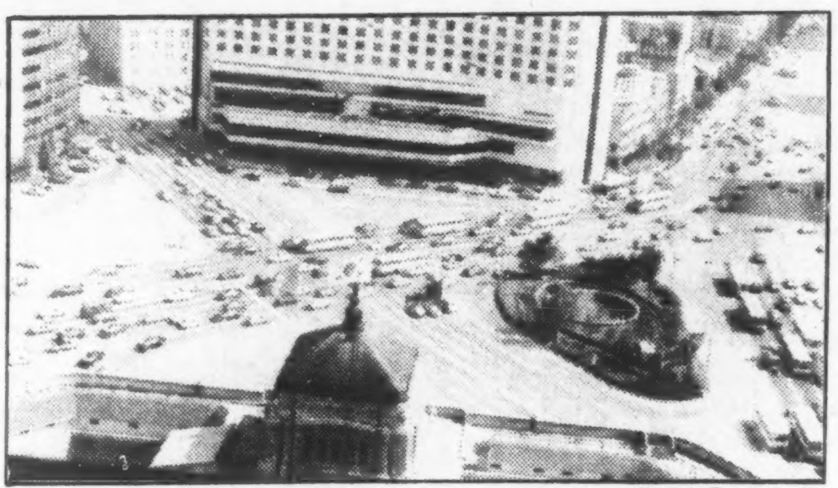


Photo:David Lake

SEOUL, THE CAPITAL OF SOUTH KOREA.

By David Lake

AMERICAN BANKS have played a major role in the economic miracle of South Korea. Short on natural resources, the country has always been dependent on access to foreign funds and the services offered by international financial institutions.

Foreign banks continue to be an indispensable fact of life for Korea, whose main asset is a determined labor force. While Korea's Gross National Product (GNP) growth is hovering around 10%, the country is the world's fourth-largest sovereign borrower. To boost GNP to the $90 billion level, Korean debt has risen to an estimated $47.4 billion this year.

Korea, however, is cutting back on foreign borrowing. And there has been a dramatic change in the country's business environment, some banks say.

Due to a new administrative finance directive, the Korean government hopes to use only half of the $5.7 billion in foreign loans that it has allotted itself for the entire year. As of July 1986, the government had $1.7 billion in foreign debt outstanding.

Though there is an element of risk when dealing with Korea, financing expansion has been a profitable endeavor for American banks. Of the 47 foreign banks operating branches in Korea, American subsidiaries are the most profitable.

In 1985, the top 10 U.S. banks earned $46 million from lending to Korea. Leading the way were Citibank ($10 million), Bank of America ($8 million), Chase Manhattan Bank ($6.5 million), Manufacturers Hanover Trust Co.($5 million), and Bankers Trust Co. ($3.4 million). The remaining $13.1 million was earned by the other five banks. That compares with combined earnings of $5.6 million for the five most profitable non-U.S. concerns.

"American banks are very important to our success," says Chul Kyoo Shin, senior vice president of Hyundai Engineering and Construction. "Their information network is as important to us as their lending capability. We are online with Citibank for information on world money markets. If we want to know the Eurodollar rate, we just push a button."

Hyundai Engineering and Construction is at the center of the powerful Hyundai Group, with total sales of about $15 billion. With engineering projects from Vancouver to Iraq, Hyundai Engineering has more than $4 billion in outstanding contracts.

The company's biggest project cost Saudi Arabia $940 million — 40 banks worked to arrange operational funds and other services necessary to complete the deal. Hyundai Engineering's largest financing was a $100 million, 12-year floating-rate note underwritten by Long-term Credit Bank of Japan and the Korean Exchange Bank.

"To smoothly run our projects overseas, foreign banks are a must," says Mr. Shin. "We borrow money and we use some very sophisticated services. But whether they [banks] are located in Seoul or New York does not matter. I can just pick up the phone and make a deal. It is the pricing that matters."

'A Good Country for Americans'

According to Sam Clark, general manager of the Seoul branch of Security Pacific National Bank, "Korea has been a good country for Americans. But it's losing some of its appeal. Back in the 1970s, we concentrated on lending to Korean banks and government bodies. Private sector business was done, but banks were selective and achieved high margins.

"In the last five years," Mr. Clark continues, "30 foreign banks have entered, and there has been a scramble for business. Korean borrowers have become sophisticated, and spreads have dropped. We used to guarantee local corporate bonds at 1.5% per annum, now some do it as low as 70 basis points. For the inherent risk, the return is ridiculous."

Though profitability may drop in the future, high returns have made U.S. banks the public whipping boy. American bankers are angered by the "profit monger" label that has been attached

Continued on Page 15

David Lake writes on business from Montreal, Canada.

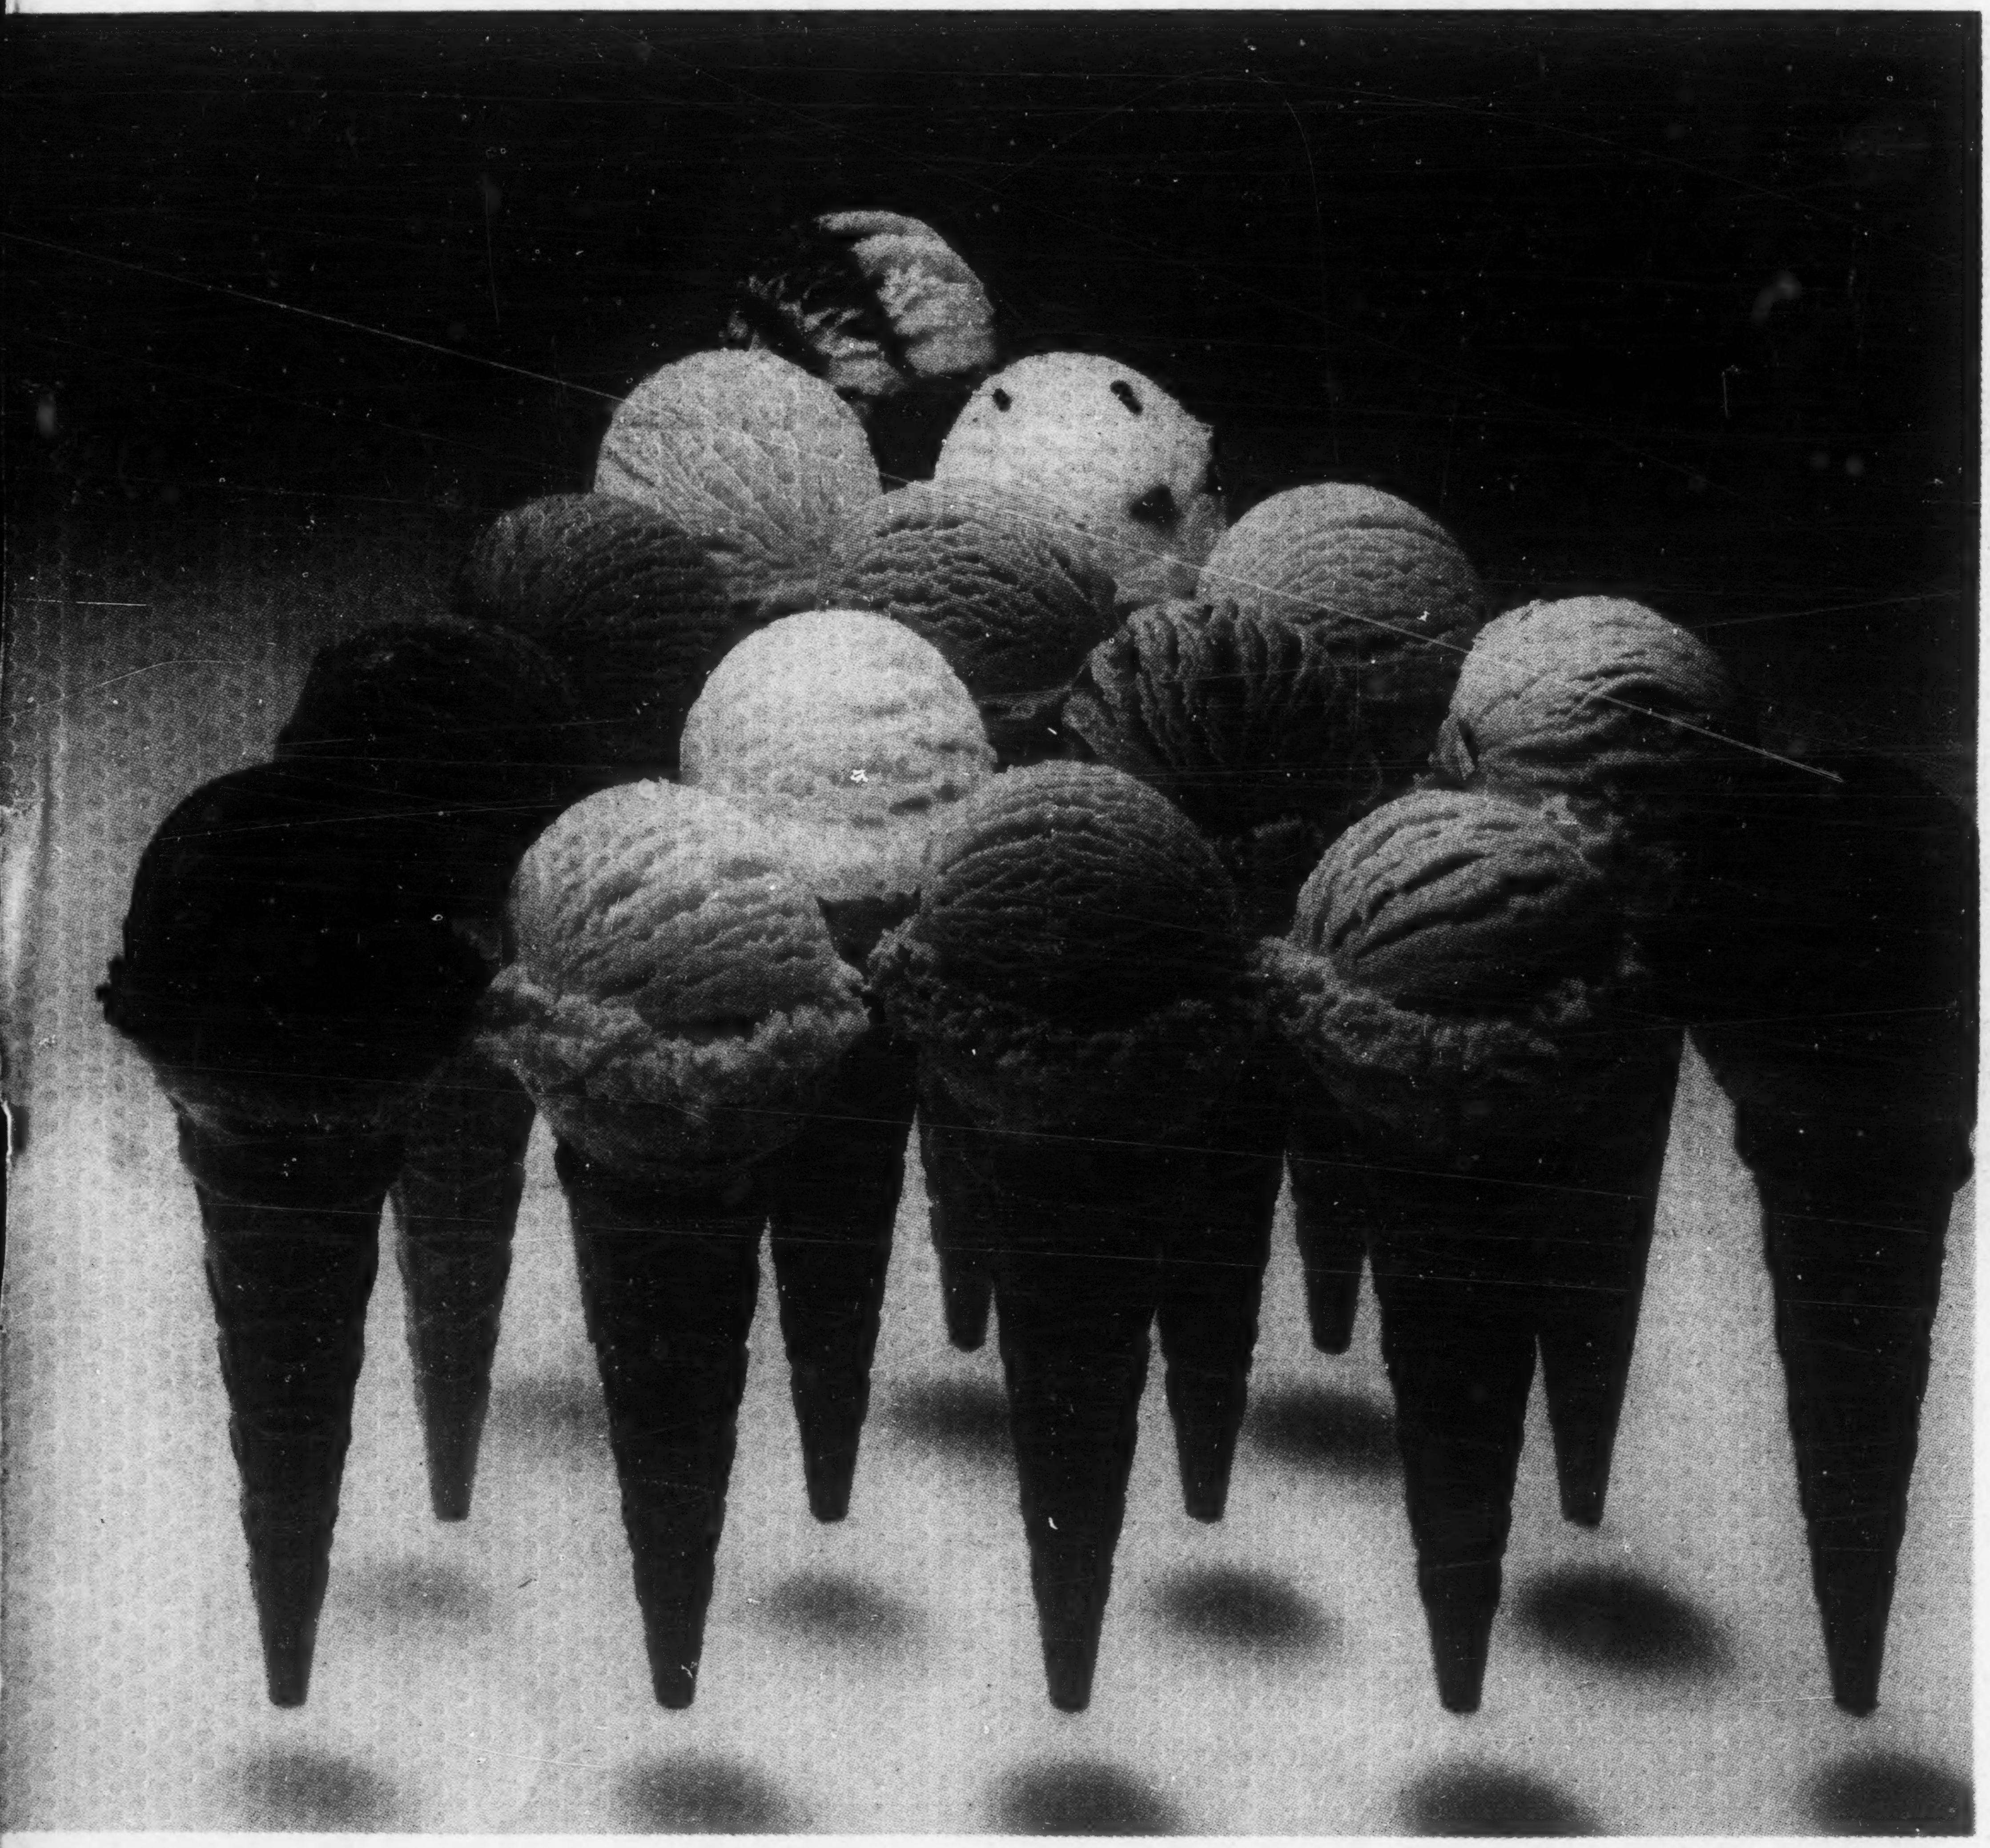
South Korea's Gross National Product has been rising consistently in the past few years and is expected to continue to grow at a rate of 7% per year until 1990.

Although the amount of Korean debt is extremely high — about $47 billion — the country's debt-service record is excellent.

Furthermore, the United States has been pressuring the Korean government to liberalize its banking industry. All this could lead to greater U.S. banking expansion in this country, but a new government directive seeks to cut in half the amount of foreign loans Korea has.

The top five U.S. bank holding companies hold 72%, or 444 offices, of the total number of offices in the Pacific Rim operated by the top 25 U.S. bank holding companies.

The subsequent five U.S. bank holding companies hold 17% of the offices, or 106 offices. And the remaining 15 of the top 25 holding companies operate 11%, or 68 offices. ■



s you just desserts.

franchising in 1981 after uniting our own affiliates in 11 western states under the First Interstate name.

Since then, franchisees have come aboard from 10 states–Hawaii, Alaska,Montana,Wyoming,Colorado, Wisconsin,New Mexico,Iowa,North Dakota and Indiana.These operations represent 37 banks with 128 offices and $4.5 billion in combined assets.

Here's how one franchise bank profited immediately after changing its name:

First Interstate Bank of Wisconsin, positioned in America's dairy heartland, helped our trading division arrange the sale of $1 million worth of premium cattle to a major dairy products company in South Korea.The bank quickly found sellers and established itself as an organization that could handle complex international trade agreements.

To learn more about our franchising program, call Shirley Hosoi, President, First Interstate System, Inc., at (213) 614-3043. She'll give you the scoop.

Continued from Page 13

to their operations, and they have launched a public relations campaign through the Foreign Bankers Group to change that perception.

American banks' income statements often are compared with those of domestic banks. In 1985, profits of the eight major Korean commercial banks were negligible. Profits were down partially because the Korean government has asked local banks to extend support loans to troubled heavy industry, chemical makers, overseas construction, and shipping concerns.

Those companies have suffered from the worldwide recession, and their loans are problematic. Total bad loans are estimated at $5 billion for the beleaguered Korean banks.

But the reasons for poor profitability among domestic institutions are of little consequence to anti-American radical students in Korea. Angered by U.S. involvement in the country, they attack or denounce American banks on a regular basis.

Most major U.S. institutions face threats of hostility, but the 20-branch Kor-Am Bank, a joint venture between Bank of America and 10 Korean corporations, has borne the brunt of student unrest. Over the last two years, the bank has weathered attacks, including fire bombings, and sit-ins.

"Whenever anti-Americanism rears its head, Kor-Am gets hit," says Arjun Mathrani, general manager of Chase Manhattan Bank's branch in Seoul.

"Foreign banks have to be sensitive to the radical element. If things go badly for Korean constitutional reform, the radicals turn around and blame America and its symbols. We have to keep a low profile and tight security," he says.

Walking a Fine Line

American banks also walk a fine line with the Korean government. Recently, Korean tax officials targeted foreign-bank profitability to enrich the country's coffers. Under revised guidelines the banks will be forced to pay tens of millions of dollars in retroactive taxes.

After studying taxation laws in other countries, Korea's tax department is convinced that foreign banks have allocated too many head office and offshore loans expenses while deducting interest paid on money borrowed from other branches.

"The foreign banking community feels it has been handled rather poorly," says Mr. Mathrani of Chase, one of the banks currently under audit. "They [Korean tax officials] don't really understand how foreign banks operate. We believe that at least two of the points they have made are in violation of the U.S.-Korea tax treaty."

And Mr. Clark of Security Pacific says, "The tax system is considered narrow and unfair. If we borrow money for a Korean loan from one of our branches, the authorities believe it is less than LIBOR (London Interbank Offer Rate) and disallow one-sixteenth of a percent of interest expense. That hurts, given that our branch borrows at LIBOR from other Security Pacific profit centers."

Foreign operations are scrutinized closely by the Korean government, which is trying to shelter failing domestic banks from competition. Financial deregulation is on the way, but many foreign bankers wonder what role they will play when the government decides how the new system will be set up.

Morgan Guaranty Trust is one bank that has reacted strongly to the Korean financial environment. Effective at the end of 1986, Morgan will close its Seoul banking office. Though the bank has realized profits ($2.8 million in 1985), it has decided to handle Korean business through a representative office.

With new market forces at play, conflict between the various factions is causing problems for regulators trying to liberalize financial markets.

Domestic and foreign banks, security firms, leasing companies, and merchant banks are all battling to protect and enlarge their territories. The arguments range from positions on universal banking to the lifting of onerous foreign exchange regulations. (Foreign banks are restricted to making domestic loans in won.)

Wary of Foreigners

Domestic banks are wary of any foreign-bank foray into their realm, and, indeed, analysts portray the domestic banks as easy victims for the sophisticated foreign banking community.

"The Korean government is committed to liberalizing financial markets," says John Torp, Bank of America vice president and chairman of the Korean Foreign Bankers Group. "One-stop banking would definitely be an attractive proposal, but most of us are looking for national treatment — the right to do all the things local banks do.

"For example, we want to open more branches, properly secure lending, issue CDs, and have access to the commercial note discount window."

A. Ewan R. Copeland, vice president of Citibank, the largest foreign bank in Korea with $1.4 billion in assets, says, "Whatever the government allows us to do we will try. The return does not matter if we feel we are contributing to the opening of Korean financial markets. There are many smaller banks which come in to make money and leave when there is any sign of trouble. As a big bank, we have to stay and play."

American bankers desire many changes in the Korean business environment. Basically, they want to expand from traditional financing and trade services to handling fee-based business and attracting won deposits.

Foreign banks had been allowed to hold $15 million worth of won, but that amount has been reduced to $10 million. As a result, foreign banks are unable to fund properly, which is perhaps the most common problem for American banks.

Bank of Korea permits two main sources of funding: converted capital — from U.S. dollars to won — and a limited currency swap facility. Though the government guarantees a swap margin of about 75 basis points, any excess won accumulated by a foreign bank is deposited with Bank of Korea.

Photo:David Lake

JOHN TORP

When the central bank finds a counterparty — someone to take the other side of a swap — the foreign bank is automatically expected to accept the risk of the chosen recipient.

"Most foreign banks show a solid growth pattern until funding runs out," says Mr. Clark of Security Pacific.

Diners Club Caters to Korea

BUILDING ON FAR EASTERN retail experience, Citicorp is looking to attract affluent Koreans for its newly established Diners Club travel and entertainment card.

The Korean government allowed the entrance of international credit cards into the country's consumer market two years ago.

Since then, American Express and Diners Club have moved in to handle overseas transactions by Koreans, while Visa and MasterCard have expanded their ties with local banks to provide a complete credit card package.

"Diners Club has attracted some 10,000 customers, and we are hoping to expand that to 20,000 by year end," says Julio Leung, general manager of consumer services for Citicorp Korea.

"It's been a tough two years, but it's worthwhile. Look at the macro-dimensions of the market. Though they are not the same as Japan and the U.S., if you take the cities of Pusan and Seoul, there is a potential of 600,000 cards," he says.

Citicorp believes that success in the Korean credit card market will come with time. As the country becomes wealthier and its population travels more, there will be greater demand for the card.

Investment in customer service outlets, accessible branches, and well-planned advertising will dictate which company is in a position to take the most advantage of future demand.

"In this market, there are more wealthy clients than most people realize," says Mr. Leung. "For example, we have found that there are 10,000 Korean students registered in U.S. schools. That means there are 10,000 parents rich enough to pay for such an education. These families need to be served properly by a comprehensive card."

Direct mail has been the main marketing tool for Diners Club, which purchases mailing lists to pinpoint demographic groups. And since Korean wages are relatively low, the cost of employing a large sales force is not prohibitive. Thus, direct-mail campaigns often are followed up by telephone marketing and personal visits to prospective cardholders.

Still, some believe the market for international credit cards in Korea is limited. Given foreign exchange controls restricting leisure travel, only a certain number of businessmen are permitted to visit abroad. The typical Diners Club client tends to be an upscale businessman who has either traveled internationally or has family overseas.

The foray into the retail market by Diners Club is advance work for other Citibank strategies. If the card attracts 600,000 members, the bank will try to convert the card users into customers for banking services, including checking and savings, mortgage loans, and foreign exchange transactions.

"Citicorp wants to cross-sell banking services to cardholders," says Mr. Leung. "By leveraging off the more established Diners Club business, we won't be forced to hit the streets to look for all our clients."

So far, the Korean authorities have allowed Citibank to set up only two branches. But the bank's management would like to obtain licenses for at least 10 branches, with Seoul as the focus of attention.

Currently, the bank's retail business is losing money because of start-up costs. But, in the future, Citibank hopes to match the success it previously achieved in Hong Kong. With close to 40 outlets established during more than 25 years of business, the Hong Kong retail network is the bank's fourth-largest network worldwide.

Continued from Page 15

"Once you've lent out all your won under swap and capital limitations, the only thing to do is place a call on the won option market, which goes to 15 days. If a customer wants to borrow for six months, you must risk refunding every 15 days or convert more capital. If you decide to bring in more capital, then there is the exchange risk. Since opening in 1983, our capital has dropped $400,000 because of currency devaluation," he says.

And Mr. Mathrani of Chase says, "When we swap our dollars with Bank of Korea, there is little currency risk. But the country risk is substantial. If they can't give us back our dollars, we have another Brazil on our hands. We need to increase domestic won funding to minimize our risk."

If American banks are to have a greater profile in the local market, they will have to adhere to some concessions. One plan currently under discussion is an increase in mandatory lending to small and medium-size Korean businesses to 35% of incremental loans from 25%.

"The cost of growth is great if we have to increase exposure to small and medium-size businesses," says Mr. Mathrani. "In the U.S., a company that size would have to give substantial collateral to obtain loans from local branches. Yet, with the alien property law forbidding us to make proper use of Korean collateral, the exposure is dangerous."

Regulators are contemplating a two-tiered system for those banks not interested in national treatment and all that it entails. Foreign banks currently face fewer restrictions than local banks. Giving them national treatment would dramatically change the business environment, due to the restrictions that would be added.

There are two classes of American banks in Korea. One class, which is looking for national treatment, arrived in Korea the early 1960s. It includes Citibank, Bank of America, and Chase. The banks now have staffs of 250 entrenched in wholesale, middle market, and some retail activity.

The vast majority of American banks in Korea, however, belong to the second class. It includes a group of smaller banks that opened branches between 1975 and 1983 and deal strictly in wholesale lending to top corporations. The group includes Security Pacific, Chemical Bank, and First Interstate.

Regardless of what legislators decide to do in Korean financial markets, all the participants in the markets know that the key to future success lies in the direction of securitized lending.

Korean financial needs are changing as fast as the country itself. Following a worldwide trend, sovereign and corporate borrowers are beginning to infiltrate international debt markets to meet obligations. In the last couple of years, the level and complexity of these offerings have increased.

With the Korean government's blessings, Samsung Electronics offered $20 million in convertible bonds on the Euromarket in the beginning of 1986. The dollar amount was low, but the occasion was historic.

The issue gave foreign investors their first shot at directly buying a Korean company's stock on the local market. Though the price of conversion was astronomical by some standards, investors flocked to the issue after an initial period of disdain.

Daewoo Heavy Industries Co., one of Korea's most important companies and the leader in the Daewoo group, was the second company into the convertible bond market. Its $40 million Euromarket offering is the largest to date; the issue was handled by Nomura International; Goldman, Sachs & Co.; and Daewoo Securities.

"The government is allowing convertible bonds as a stepping stone to foreign investors," says Kyung Hoon Lee, president of Daewoo Heavy Industries.

Since Samsung's success, Daewoo Heavy Industries and Yukong Co. have entered the convertible bond market. Yet, the market has slowed, as Korean officials have indicated they still are not ready to implement a complete capital liberalization program. To keep foreigners from flooding local markets, the government is limiting the amount of overseas financing.

Capital market activity has led many bankers to look for merchant banking opportunities.

Bankers Trust, with close to 70% of its business in capital markets products, boasts of handling more than 50% of all Korean interest and currency swap transactions.

"Until now," says Keun-Sam Lee, vice president of Bankers Trust's Korean branch, "Korean banks have been the country's sophisticated capital market players. Now the Korean corporate client is beginning to use diversified instruments. As long as political stability is maintained, we will see an ever-increasing number of Korean corporations in this market. But, competition for this business is fierce." ■

Korea Bets on Triple

THEY CALL IT the Triple Crown in Korea. Low interest rates, low oil prices, and the low value of the Korean won against the yen and dollar are expected to stimulate Korea's economy, as the country's annual Gross National Product (GNP) growth is forecast to average 7% until 1990.

A booming South Korean economy has made the country one of the most profitable regions for American banks in the Far East. Boasting the highest external debt in Asia — estimated to rise from $47.4 billion in 1986 to $60 billion by the end of the decade — Korea has impressed international lenders with its debt-service record.

That does not mean there are no dark clouds on the horizon. Not even the most optimistic banker would deny that Korea is without risk.

Twenty-five miles from downtown Seoul, North Korean soldiers aggressively patrol the border. Internally, Korea's president, Chun Doo Hwan, has yet to come up with an acceptable constitution.

And, with protectionist sentiment still running strong in the U.S. Congress, Korea could suffer a severe downturn if borders to its most lucrative market are shut.

Politics is a subject most Koreans prefer not to discuss, but trade is fair game. The United States is Korea's largest trading partner, with volume having reached $17.2 billion in 1985, and increasing at an annual rate of 25%.

"Protectionism is a big concern," says Kyung Hoon Lee, president of Daewoo Heavy Industries, one of the oldest industrial concerns in Korea.

"Though many believe Korea no longer fits developing-world status, this country needs support from trading partners. We are not wealthy from exports like Japan [is]. Korea ran a $880 million trade deficit last year, and 6% of our GNP goes to defense," he says.

While 60% of the nation's GNP is derived from trade, the United States receives 40% of Korea's $32 billion of exports. Though Korea accounts for only 3.2% of the total U.S. trade deficit, the country feels that it has suffered from the success of Japan.

Observers like to point out that over the last 25 years of trade with the United States, Korea ran a deficit in 21 of those years. To counteract protection-

Merchant Bank Blossoms

SAEHAN MERCHANT Banking Corp., a joint venture among competing financial institutions from Korea, America, Japan, and Britain, has become one of Korea's most profitable merchant banks.

As a merchant bank, Saehan does not lend out its own funds. Instead, it specializes in providing various financial services, such as underwriting new issues and giving advice on portfolio management.

Established in 1977, Saehan has domestic-securities, investment, trust, and short-term-finance operations, as well as leasing and international operations. In 1985, the merchant bank had assets of $326 million — up 16% from 1984's figure — and revenues of $56 million and net income of $5 million.

The firm is made up of 10 shareholders: 30% of the company stock is owned by Korean Development Bank; 29.5% by Chemical International Finance; 10% by Korean Exchange Bank; 10% by Daewoo Securities and Lucky Securities; 19.5% by Industrial Bank of Japan, Long Term Credit Bank, Nomura Securities, and Yamaichi Securities; and 1% by Hill Samuel.

"Saehan's diverse shareholder base gives management a better understanding," says J. Patterson Cooper, executive vice president of Saehan and a former member of Chemical Bank.

"Though merchant banks in Korea are profitable, most have adopted joint ownership to spread the perceived risk and to get around restrictive legislation. As shareholders, we all have a common purpose and support our strategy with advice and money," he says.

A merchant banking license is a much-sought-after item in Korea. There are only six merchant banking institutions in the country, and the Korean government has not granted a new license since 1978.

With permission to operate in this business, foreign banks can reduce their risk by augmenting earnings with fee-based income. Although merchant bank involvement in the Korean economy is strictly regulated, merchant banks have an easier time attracting won funds than do foreign banks.

"Foreign banks have a more limited license," says Mr. Cooper. "Their access to the won market is limited by Bank of Korea, and they don't have the instruments to compete with local banks for deposits. Merchant banks have Korea's broadest license, and it is reflected in our success."

Merchant banks may be happy with their mandate, but recent reports show that the regulators are not satisfied with the merchant banks' performance. Government dissatisfaction stems from a belief that investment banking is not crucial in the evolution of a new Korean capital market. The government also is displeased with the banks' reliance on short-term money market activity.

Saehan is one of the more diversified players in the merchant banking industry. As a merchant bank, it is important in onshore foreign currency lending. Saehan's deals range from $10 million to $20 million and usually entail the lending of U.S. dollars, Deutsche marks, and Swiss Francs. Though demand for foreign capital is currently low, the bank's foreign currency loans amount to $75 million.

Saehan is active in Korea's $10 billion capital market. The bank is allowed to underwrite bonds and equities, while guaranteeing and managing global issues. Using seven investment trust funds of varying maturities and interest rates, Saehan invests in local money market bonds.

Korea had a record-breaking year in 1985 in terms of corporate bonds issued. The volume increased 76% from the figure for 1984, exceeding $3.5 billion. Saehan was operating in this market at seven times its net worth. But when Korea's Finance Ministry changed the guideline for acceptable exposure to five times a bank's net worth, the merchant bank suffered a decline in business.

Leasing is another area of growth for Saehan. In this intensely competitive business, the bank has been growing 30% annually the past five years. In 1985, Saehan led all local merchant banks, with more than $40 million in signed leasing contracts. And the bank's management intends to build on this strength.

To better compete in the Korean market, Saehan recently increased paid-in capital by nearly 50% — from $11.3 million to $17 million. Regulations permit merchant banks to leverage off net worth at a 20-to-1 ratio. The $110 million leeway achieved by Saehan will be used to increase lucrative participation in equity and debt issues.

— David Lake

Crown

ist sentiment, the country plans to liberalize cigarette, liquor, advertising, insurance, and banking sectors.

"The U.S. constantly demands we open markets, and sometimes we wonder why," says Kyong Hae Kim, publisher of *Business Korea*, an influential magazine of economic and business affairs. "Two years ago Korea was pushed by the U.S. to liberalize the chocolate market. When it was done, the market was snapped up by the Swiss and Japanese manufacturers."

Korea's relations with Japan are just as important as its relations with the United States. Korea was a Japanese colony for about 35 years; there is no love lost between the two countries. Today, they compete for the same markets, and Korea is beginning to come out on top.

Yet, when it comes to importing technology and high-quality raw materials, Korea must turn to Japan. This is becoming a problem for a nation that expects to be Japan's largest competitor. And, with the appreciation of the yen, it is also costing Korean companies hard-earned foreign currency.

"Right now the game is in favor of Japan," says Mr. Lee of Daewoo Heavy Industries. "To change this, Korea has a goal to localize the components industry. We have started to do it, but the cost is high; there are technology limitations and problems with the economies of scale."

Domestically, 1985 was not a banner year for Korean corporations. Recorded sales growth and operating income were the lowest in five years. According to *Business Korea* magazine, 200 of the country's top companies watched combined net profits decline 16.5% from a year earlier, while some companies have a debt-to-paid-in-capital ratio of 10-to-1.

As export products gained from the depreciation of the won, companies dependent on foreign exchange and international financial market borrowings posted huge losses. Korean Air had a foreign exchange loss of $27 million, steel company Yukong lost $25 million, and Hyundai Corp. lost $20 million.

"To grow in the future, Korea must restructure its economy," says Mr. Lee. "One major problem is that our conglomerates are involved in too many businesses. They should allow smaller companies room to maneuver. As for government control of the economy, that has been important until now, but it must change. At heart, Korea is really a capitalist country."
